Preamble

Far North Queensland Ports Corporation (trading as Ports North) proposes to develop the Cairns Shipping Development Project (the project). The project components to be assessed include:

- expansion of the existing Port of Cairns shipping channel
- upgrade of existing associated port infrastructure and services
- disposal options for capital and maintenance dredge spoil material.

On 24 September 2012, the Coordinator-General declared the project to be a 'significant project' under section 26(1)(a) of the *State Development and Public Works Organisation Act 1971* (Qld) (SDPWO Act). This declaration initiated the statutory environmental impact assessment procedure of Part 4 of the SDPWO Act, which requires the proponent to prepare an EIS for the project.

The declaration of the project as a 'significant project' does not indicate support for or approval of the project by the Coordinator-General or the Queensland Government. Rather, it is a requirement for the project to undergo a rigorous EIS process.

The project was referred to the Commonwealth Minister for Sustainability, Environment, Water, Population and Communities to determine whether the project is a 'controlled action' under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) (Cwlth). On 4 October 2012, it was decided the project is a controlled action and will require assessment and approval under the EPBC Act.

The relevant controlling provisions are:

- World Heritage properties
- National Heritage places
- listed threatened species and communities
- listed migratory species
- Commonwealth marine areas
- Great Barrier Reef Marine Park
- Commonwealth land.

This TOR does not relate to matters of national environmental significance (MNES).

The draft TOR was released for public and advisory agency comment for 20 business days from 29 September 2012 to 29 October 2012. Twenty submissions were lodged and changes were made to the TOR as a result of the submissions.

The EIS should follow the format and content outlined in this TOR. Discuss any proposed change to the overall structure of the EIS documents with the EIS project manager.

Content of the EIS

1. Executive summary

The executive summary should convey the most important and preferred aspects and options relating to the project in a concise and readable form. It should use plain English, avoid jargon, be written as a stand-alone document and be structured to follow the EIS. It should be easy to reproduce and distribute on request to those who may not wish to read or purchase the whole EIS.

The executive summary should include:

- project title
- proponent's name and contact details
- a discussion of any relevant projects previously undertaken by the proponent, if applicable, and the proponent's commitment to effective environmental management
- a concise statement of the aims and objectives of the project
- the legal framework for the project, decision-making authorities and advisory agencies
- an outline of the background and need for the project, including the consequences of not proceeding with the project
- an outline of the alternative options considered and reasons for selecting the proposed development option
- a brief description of the project (pre-construction, construction, operational activities and decommissioning) and the existing environment, using visual aids where appropriate
- an outline of the principal environmental impacts predicted and the proposed environmental management strategies, commitments and rehabilitation strategies to minimise the significance of these impacts
- a discussion of the cumulative impacts in relation to social, economic and environmental factors of associated infrastructure projects proposed within the region
- detailed maps of the proposed project location and any other critical figures.

2. Glossary of terms

Provide a glossary of technical terms, acronyms, abbreviations and references.

3. Introduction

Clearly explain the function of the EIS, why it has been prepared and what it sets out to achieve. Include an overview of the structure of the document.

3.1. Project proponent

Describe the proponent's experience, including:

- the nature and extent of business activities
- experience and qualifications
- environmental record, including a list of any breach of relevant environmental laws during the previous ten years
- the proponent's environmental, health, safety and community policies.

3.2. Project description

Briefly describe the key elements of the project with illustrations or maps. Summarise any major associated infrastructure requirements. Provide detailed project descriptions in the relevant sections.

3.3. Project rationale

Describe the specific objectives and justification for the project, including its strategic, economic, environmental and social implications, technical feasibility and commercial drivers. Discuss the status of the project in a regional, state and national context. Explain the project's compatibility with relevant policy, planning and regulatory frameworks.

3.4. Relationship to other projects

Describe how the project relates to other major projects (of which the proponent should reasonably be aware) that have been or are being undertaken, or that have been proposed or approved in the area potentially affected by the project.

As a result of this assessment, there may be opportunities to co-locate existing or proposed infrastructure, enabling efficiency gains and mitigating environmental and property impacts. Where co-location may be likely, outline opportunities to coordinate or enhance impact mitigation strategies. Discuss the opportunities in sufficient detail to enable the reader to understand the reasons for preferring certain options or courses of action and rejecting others.

3.5. Project alternatives

Describe feasible alternatives including conceptual, technological and locality alternatives to the proposed project and the consequences of not proceeding with the project (including any impacts that would be avoided). Detail the criteria used to determine the alternatives and provide sufficient detail to convey why certain options or courses of action are preferred and why others are rejected (including the 'no action' option). Discuss the interdependencies of project components, particularly in regard to how any infrastructure requirements relate to the viability of the project.

This information is required to assess why the scope of the project is as it is and to ensure that the environmentally sustainable design principles and sustainable

development aspects were considered and incorporated during the project's scoping phase.

3.6. The environmental impact assessment process

3.6.1. Methodology of the EIS

Provide an outline of the environmental impact assessment process, including the role of the EIS in the Coordinator-General's decision making process. Include information on relevant stages of EIS development, statutory and public consultation requirements and any interdependencies that exist between approvals sought. The information in this section is required to ensure:

- relevant legislation is addressed
- readers are informed of the process to be followed
- stakeholders are aware of any opportunities for input and participation.

3.6.2. Objectives of the EIS

Provide a statement of the objectives of the environmental impact assessment process. The structure of the EIS can then be outlined and used to explain how the EIS will meet its objectives. The purpose of the EIS is to:

- provide public information on the need for the project, alternatives to it, assess options and make informed decisions for its implementation
- present the likely effects of the project on the natural, social and economic environment
- demonstrate how environmental impacts can be avoided, managed or mitigated and the offsets for any residual impacts
- provide information to formulate the project's environmental management plan (EMP).

3.6.3. Submissions

Inform the reader how and when properly made public submissions on the EIS will be addressed and taken into account in the decision-making process. Indicate points in subsequent approval processes for the project (for example, 'material change of use' (MCU) applications under the *Sustainable Planning Act 2009* (SPA) where submitters may have appeal rights. The EIS project manager can assist with preparing information on the submissions process.

3.7. Public consultation process

3.7.1. Overview

The public consultation process should provide opportunities for community involvement and education. It may include interviews with individuals, public communication activities, interest group meetings, printed material and other mechanisms to encourage and facilitate active public consultation. The public

consultation processes (community engagement) for all parts of the EIS should be integrated.

Consultation with advisory agencies should be the principal forum for identifying legislation, regulations, policies and guidelines relevant to the project and EIS process.

3.7.2. Consultation plan

Develop and implement a comprehensive and inclusive consultation plan with the stakeholder groups identified in section 3.2 of *Preparing an EIS: Guideline for proponents*.

The consultation plan should identify broad issues of concern to local and regional community and interest groups and address issues from project planning through commencement, project operations and decommissioning. The consultation plan should identify:

- the stakeholders to be targeted
- the types of consultation and communication activities to be undertaken
- timing of activities
- how consultation activities will be integrated with other EIS activities and the project development process
- consultation responsibilities
- communication protocols
- reporting and feedback arrangements
- how results of consultation will be considered by the proponent and integrated into the EIS process.

3.7.3. Public consultation report

Include, as an appendix, a public consultation report detailing how the public consultation plan was implemented, and the results. It must include:

- a list of stakeholders identified, including the Australian and Queensland governments, local government agencies, and/or the affected parties (as defined by the *Environmental Protection Act 1994* (EP Act))
- criteria for identifying stakeholders and methods used to communicate with them
- details of the activities conducted to date and the future consultation strategies and programs, including those during the operational phase of the project (also outlined and included in the EMP)
- a summary of the issues raised by stakeholders and the means by which the issues have been addressed
- details of how consultation involvement and outcomes were integrated into the EIS process
- details of how consultation outcomes will be integrated into future site activities (including opportunities for engagement and provision for feedback and action if necessary).

3.8. Project approvals

3.8.1. Legislation and approvals

List and describe Australian, state and local legislation, approvals and plans relevant to the planning, approval, construction and operation of the project.

Commonwealth legislation

Relevant Commonwealth legislation may include, but is not limited to:

- EPBC Act
- *Environmental Protection (Sea Dumping) Act 1981* (EPSD Act)
- *Great Barrier Reef Marine Park Act 1975* (GBRMP Act)
- *Historic Shipwrecks Act 1976*
- *Maritime Transport and Offshore Facilities Security Act 2003*
- *Navigation Act 1912*
- *Native Title Act 1993*.

Queensland legislation

Relevant Queensland legislation may include, but is not limited to:

- *Aboriginal Cultural Heritage Act 2003* (ACH Act)
- *Coastal Protection and Management Act 1995* (Coastal Act)
- EP Act and Regulation
- *Fire and Rescue Service Act 1990*
- *Fisheries Act 1994*
- *Land Act 1994*
- *Local Industry Policy Act 2012*
- *Marine Parks Act 2004*
- *Nature Conservation Act 1992* (NC Act)
- *Queensland Heritage Act 1992*
- SPA
- SDPWO Act
- *Transport Infrastructure Act 1994* (TI Act)
- *Transport Operations (Marine Pollution) Act 1995*
- *Transport Operations (Marine Safety) Act 1994*
- *Transport Operations (Road Use Management) Act 1995* (TORUM Act)
- *Vegetation Management Act 1999* (VM Act)
- *Waste Reduction and Recycling Act 2011*
- *Water Act 2000*
- *Work Health and Safety Act 2011*

Australian Government approvals

Identify and outline Australian Government approvals required including, but not limited to:

- approval, under sections 131(1) and 133 of the EPBC Act, of the proposed action for each of the applicable controlling provisions
- approval to dredge within the boundary of the Great Barrier Reef Marine Park under the GBRMP Act (Great Barrier Reef Marine Park Authority)
- sea dumping permit to dispose of dredge material at sea within the GBRMP under the EPSD Act
- marine park permit to dispose of dredge material within the GBRMP under the GBRMP Act (Great Barrier Reef Marine Park Authority).

Queensland approvals

Key Queensland approvals required, and to be considered in the EIS process, include:

- development permit for tidal works—Coastal Act
- allocation of quarry material or dredge management plan (if other than marine disposal of dredge material is proposed)—Coastal Act
- development permit for operational work within a coastal management district, that is:
 - disposal of dredged spoil or other solid waste material in tidal water—Coastal Act
 - reclaiming land under tidal water—Coastal Act
- development permit for operational work that is the removal, destruction or damage of a marine plant—Fisheries Act
- development permit for operational work that completely or partly within a declared fish habitat area—Fisheries Act
- marine park permit to widen the access channel within the General Use Zone of the Great Barrier Reef Coast Marine Park (State)—Marine Parks Act
- development approval for a material change of use of a premises for an environmentally relevant activity (ERA) and associated registration certificate:
 - ERA16: Extractive and screening activities (dredging)—EP Act

Identify the relevant approval agency for each of the approvals required.

3.8.2. Relevant plans

Outline the project's consistency with the existing national, state, regional and local planning framework that applies to the project location. Refer to all relevant statutory and non-statutory plans, planning policies, guidelines, strategies and agreements. The key plans and policies are listed under the relevant sections of this TOR. These include but are not limited to the following:

- *Far North Queensland Regional Plan 2009–31* (Department of Infrastructure and Planning 2009)
- CairnsPlan
- Cairns Port Authority Land Use Plan (LUP), under the TI Act

- environmental protection policies (EPPs, subordinate to the EP Act), including:
 - EPP (Noise) 2008
 - EPP (Air) 2008
 - EPP (Water) 2009
 - EPP (Waste Management) 2000
- State planning policies and their supporting guideline, including:
 - State Planning Policy 2/02: Planning and Managing Development Involving Acid Sulfate Soils (Department of Natural Resources and Mines & Development of Local Government and Planning 2002a)
 - State Planning Policy 1/03: Mitigating the Adverse Impacts of Flood, Bushfire and Landslide (Department of Local Government and Planning and Department of Emergency Services 2003)
 - State Planning Policy 4/11: Protecting Wetlands of High Ecological Significance in Great Barrier Reef Catchments (Department of Environment and Resource Management 2011c)
 - Temporary State Planning Policy 2/12: Planning for Prosperity (Department of State Development, Infrastructure and planning)
- Queensland Coastal Plan State Planning Policy: Coastal Management (Department of Environment and Resource Management 2011f), and Draft Coastal Protection State Planning Regulatory Provision (Department of State Development, Infrastructure and Planning 2012)
- fish habitat policies, administered by the Department of Agriculture, Fisheries and Forestry (DAFF)
- *Queensland Biosecurity Strategy 2009–14* (Department of Primary Industries and Fisheries 2008)
- *Queensland Skills Plan 2008* (Department of Education, Training and the Arts 2008)
- Queensland Local Industry Policy (Department of Employment, Economic Development and Innovation 2010)
- Queensland Biodiversity Offset Policy (version 1) (Department of Environment and Resource Management 2011b)
- State Planning Policy 4/11: Protecting Wetlands of High Ecological Significance in Great Barrier Reef Catchments (Department of Environment and Resource Management 2011c).

With specific relevance to maritime safety and operations, the following policies, guidelines and standards should be referenced:

- Maritime Safety Queensland Regulation 2002
- *Maritime Transport and Offshore Facilities Security Act 2003*
- *Transport Operations (Marine Pollution) Act 1995*
- *Transport Operations (Marine Safety) Act 1994*
- Transport Operations (Maritime Safety) Regulation 2004
- Australian Maritime Safety Authority marine orders

- Queensland Coastal Contingency Action Plan (QCCAP)
- Standards for Hydrographic Surveys within Queensland Waters
- Transport Operations (Marine Pollution) Regulation 2008.

3.8.3. Environmentally relevant activities

Briefly describe each environmentally relevant activity (ERA) under the EP Act and associated activities that are to be carried out in connection with the project. Present a detailed description of each ERA in Section 5, Environmental values and management of impacts. Provide details of the impact on land, water, air, noise and any other identified environmental values, as well as a detailed description of the waste generated from each ERA and its quantity, characteristics, handling, storage, management and intended treatment and disposal.

4. Project description

Describe the project through its lifetime of pre-construction, construction, operation and potentially decommissioning. The project description also allows further assessment of which approvals may be required and how they may be managed through the life of the project.

4.1. Overview of the project

Provide an overview of the project to put it into context. Include:

- a rationale explaining the selection of the preferred operating scenario, including details such as cost, environmental impacts, and the development operational efficiencies of each option
- a description of the key components of the project including the use of text and design plans where applicable
- a summary of any environmental design features of the project
- the expected cost, timing, and overall duration of the project, including details of and justification for, any staging of the development.

4.1.1. Shipping Entrance Channel Dredging

Describe, map and illustrate the location, area, depth and volume of dredging required for the project, including currently dredged and approved areas for dredging in relation to the proposed dredging.

Explain the provisions of any previous sea dumping permits for port operations relevant to the project including dates, volumes and existing spoil ground location, capacity and environmental values.

Provide details of the dredging methods including:

- the type and design of dredge vessel and equipment to be used, including number and type of vessels and reasons for the proposed selection of equipment including additional or reduced contribution to sediment plume generation according to vessel type being used as compared to alternative vessel types

- the expected duration, timing and operation hours of dredging campaigns (including the reasons for any staging)
- expected dredge and support vessel movement paths and frequency
- measures to be used to minimise risk of introducing exotic species on dredging equipment
- whether, where and how any blasting may be required, including scale, frequency and duration of the blasting and proposed management measures
- operational management of dredging and dredge spoil handling, particularly in relation to sediment plume generation according to vessel type being used, impacts on water quality and marine mega fauna (including turtles, dolphins, sharks and dugongs).

4.1.2. Dredge spoil disposal

Provide details of the grading and composition of likely dredged materials, including potential contaminants as required for testing completed in accordance with the *National Assessment Guidelines for Dredging* (NAGD) (Commonwealth of Australia 2009)

Describe proposed disposal options for both capital and maintenance dredge spoil including:

- disposal site locations, characteristics, dimensions and capacity (including initial and final bathymetry for unconfined sea disposal sites)
- stability of the disposal site options (retentive or dispersive, considering wave and current erosion) and any requirement for containment)
- disposal methods including provision for different dredging equipment, material characteristics, contaminants or acid sulphate soils where relevant.

Sea disposal

Where sea disposal is considered, describe the selection of the preferred spoil disposal site based on:

- relevant agreements, guidelines, policies
- potential ecological impacts
- characteristics of the spoil
- dredging technology constraints
- economic benefits
- cost of alternatives
- lifespan of current maintenance dredge spoil disposal site, impacts on lifespan of current site and lifespan of proposed site.

Land disposal options consideration

Provide descriptions of all feasible alternative land-based spoil disposal sites including:

- equipment and pipeline routes to be used
- location and nature of tail water discharge points

- details of estimated commencement, completion, rate of progress and existing levels and proposed final levels of the land e.g. for filling land or reclamation work
- typical cross-section of the land e.g., for filling land or reclamation work.
- where there is potential for impacts from sea erosion, method of protecting the seaward boundary of the land
- construction details of any temporary or permanent treatment or dewatering structures including measures to contain or collect seepage waters.

Reclamation for land disposal options consideration

Provide the following information in relation to any proposed disposal of dredge spoil to reclaim land below the limit of highest astronomical tide (HAT):

- the boundary of land to be filled or reclaimed by metes and bounds, tied to real property boundary/Commonwealth/State land boundaries
- the location of the limit of mean high water spring tide, HAT and lowest astronomical tide
- existing levels of the land and proposed final levels relative to the Australian height datum (AHD)
- method of containment of the dredge spoil and protection from erosion with certification of design by a registered professional engineer of Queensland (REPQ).

Bund walls land disposal options consideration

Where breakwater and revetment walls or reclamation are proposed provide geotechnical and composition information on sediments that may be displaced, and the potential impact of sediment dispersion or displacement on water quality and marine ecosystems, including:

- bore logs at a frequency and depth, and with material characterisation sufficient to determine potential displacement of material and/or the need for excavation
- contaminant assessment of material potential displaced or excavated consistent with the NAGD
- acid sulfate soil survey of material potentially displaced or excavated consistent with the *Guidelines for Sampling and Analysis of Lowland Acid Sulfate Soils (ASS) in Queensland 1998* (Ahern et al. 1998).

4.2. Location

Describe, using maps at suitable scales, the regional and local context of the project and all associated infrastructure. Provide real property descriptions of the project. Maps should show the precise location of the project area, in particular the:

- location and boundaries of current or proposed land tenures that the project area is or will be subject to, and details of the ownership of that land
- location, boundaries, and area and size of the project footprint, including easement widths and access requirements
- location and size of any proposed buffers surrounding the project area (for construction and operation)

- location of infrastructure relevant to the project, including but not limited to, the state-controlled road network, local roads and railways, and marine infrastructure
- location of natural features such as waterways (for example, rivers, streams, creeks, other water bodies and wetlands), shorelines, and significant or assessable vegetation
- location of any proposed site offices and accommodation sites
- State and Commonwealth marine parks and fish habitat reserve boundaries within or adjacent to the project site.
- extent of strategic port land and future strategic port land
- infrastructure relevant to approvals including discharge and monitoring locations
- location of natural features including intertidal sand and mud banks, wetland areas including Port of Cairns and Trinity Inlet Wetland
- location of seagrass beds, mangrove vegetation, national heritage values, world heritage areas.

4.3. Port facilities and operation

4.3.1. Port description

Provide concept and layout plans highlighting existing structures and proposed structures and plant equipment associated with the port. The description of the port and the layout of key components should include, but is not limited to:

- port boundaries
- jetty and wharf alignment
- offshore ship mooring locations
- location of navigational aids
- ship-sourced pollution management facilities
- any other associated facilities.

4.3.2. Structures

Describe all structures, including:

- locations and dimensions of buildings, refuelling and marine infrastructure associated with the port expansion
- location and extent of any proposed breakwater and revetment structures (if required) and the likely construction methodologies
- the design criteria and any modifications of structures that may be needed to accommodate climate change and sea level rise.

Provide maps and figures detailing where permanent or temporary loss of tidal land is likely to occur as a result of building and structures.

4.3.3. Maritime operation

Describe the location and nature of processes and operations associated with the operation of the project, including:

- a general description of operations
- the current and expected increased shipping numbers, sizes, frequency, speed, route and piloting requirements through the Port of Cairns and GBRMP for current and future port operations
- hours of operation
- expected access, navigational and anchorage arrangements
- maintenance dredging operations, including frequency and reference to the planned spoil disposal locations
- description of arrangements for maintenance of marine facilities, such as ship-sourced pollution management facilities including details of responsible parties
- details of predicted usage of marine facilities, including opportunities for recreational and public usage
- detailed requirements of vessel operations, including pilotage, channel closures, quarantine and security arrangements.

Describe the impact of operations on offshore moorings during construction and operation of the proposal, the removal if any of the moorings and the nature of any impacts on existing recreational and commercial fishing boat owners.

4.4. Construction phase

Provide a detailed staging plan and approximate timeframes for the project's construction activities.

Provide an estimate of the number and roles of persons to be employed during the construction phase of the project.

Provide the following information on the pre-construction, construction and commissioning of the project, including detailed plans, drawings and maps.

Describe all pre-construction activities, including nature, scale and timing of:

- any land acquisitions required, be it in full or as easements, leases
- any vegetation clearing including marine plants
- site access
- earthworks
- access to, sampling, quarrying or removal of quarry material
- interference with watercourses and floodplain areas, including wetlands, salt marsh areas and mangroves and intertidal areas
- site establishment requirements for construction facilities, including access measures, movement of materials and equipment, and expected size, source and control of any construction workforce accommodation, services (water, sewerage, communication, energy, waste disposal) and safety requirements
- temporary works
- upgrade, relocation, realignment, deviation of or restricted access to roads and other infrastructure
- equipment to be used,

- infrastructure for fuel, chemicals and hazardous materials.

4.4.1. Program of works

Describe all the construction elements of the project, including:

- an indicative construction timetable, including expected commissioning and start-up dates and hours of construction
- major work programs for the construction phase, including an outline of construction methodologies
- construction equipment to be used
- construction inputs, handling and storage including an outline of potential locations for source of construction materials
- major hazardous materials to be transported, stored and/or used on site, including environmental toxicity data and biodegradability
- clean-up and restoration of areas used during construction and storage areas.

4.4.2. Commissioning

Describe the commissioning process including any associated environmental impacts.

4.5. Associated infrastructure

Detail, with the aid of concept and layout plans, requirements for new infrastructure or upgrading/relocating existing infrastructure to service the project. Consider infrastructure such as transportation (road/rail/air/ship), water supply and storage, energy supply, telecommunications, stormwater, waste disposal and sewerage.

Describe:

- all infrastructure required to be constructed, upgraded, relocated or decommissioned for the construction and/or operation of the project, such as access roads, power supply, connection to sewerage or water supply
- the design and construction standards to be met
- alternative approaches or the opportunity to obtain materials from alternative sources.

4.6. Decommissioning and rehabilitation

Present a plan for decommissioning and rehabilitating the site, should it ever be required.

5. Environmental values and management of impacts

Detail the environmental protection and mitigation measures incorporated in the planning, construction, rehabilitation, commissioning, operation and decommissioning of all facets of the project. Measures should prevent, or if not possible, minimise

environmental harm and maximise environmental benefits of the project. Identify and describe preferred measures in more detail than other alternatives.

The objectives of the following subsections are to:

- describe the existing environmental values of the area that may be affected by the project, using background information and/or new studies to support statements (include reference to all definitions of environmental values set out in relevant legislation, policies and plans)
- describe the potential adverse and beneficial impacts of the project on the identified environmental values and the measures taken to avoid, minimise and/or mitigate those impacts
- describe any cumulative impacts on environmental values caused by the project, either in isolation or in combination with other known existing or planned projects
- present objectives, standards and measurable indicators that protect the identified environmental values
- examine viable alternative strategies for managing impacts (present and compare these alternatives in view of the stated objectives and standards to be achieved)
- discuss the available techniques to control and manage impacts in relation to the nominated objectives.

Where negative impacts of the project cannot be avoided or adequately minimised or mitigated, present proposals to offset impacts in accordance with the Queensland Government Environmental Offsets Policy (Environmental Protection Agency 2008b).

The mitigation measures and monitoring programs, identified in this section of the EIS, should be used to develop the EMP(s) for the project. For more information, refer to Section 11 (page 51).

5.1. Climate, natural hazards and climate change

Describe the climatic conditions that may affect management of the project. This includes a description of the vulnerability of the project area to seasonal conditions, extremes of climate (for example, cyclones) and natural or induced hazards.

Provide a risk assessment (as part of the requirements of Subsection 8.1 of this TOR) and management plan detailing these potential climatic threats to the construction, and operation of the project. Include the following:

- a risk assessment of changing climate patterns that may affect the viability and environmental management of the project
- the preferred and alternative adaptation strategies to be implemented
- commitments to working cooperatively, where practicable, with government, other industry and other sectors to address adaptation to climate change.

Address the most recent information on potential impacts of climatic factors in the appropriate sections of the EIS.

Specific storm surge requirements are addressed in Section 8.

5.2. Land

Detail the existing land environment values for all areas associated with the project. Describe the potential for the construction and operation of the project to change existing and potential land uses of the project sites and adjacent areas.

5.2.1. Land use and tenure

Description of environmental situation

Identify, with the aid of maps:

- land tenure, including reserves, tenure of special interest (such as protected areas and forest reserves), existing and proposed gas infrastructure, water pipelines, powerlines and transport corridors, including local roads, state-controlled roads and rail corridors
- existing land uses and facilities surrounding the project
- distance of the project from residential and recreational areas
- declared water storage catchments
- location of the project in relation to environmentally sensitive areas .

Resource entitlement compliance is required pursuant to Schedule 14, *Sustainable Planning Regulation 2009*.

Potential impacts and mitigation measures

Describe the potential changes to existing and potential land uses due to the construction and operation of the project. In particular, describe the following:

- impacts on project site and adjacent land uses and human activities and strategies for mitigation, such as those required by:
 - local government planning schemes
- possible effect on town planning objectives and controls, including local government zoning and strategic plans
- constraints to potential developments and possibilities of rezoning adjacent to the development area
- management of the immediate environs of the project including construction buffer zones
- proposed land use changes in any areas of high conservation value and information on how easement widths and any vegetation clearance in sensitive environmental areas will be minimised
- potential issues involved in proximity and/or co-location of other current or proposed infrastructure services
- any land units requiring specific management measures.

5.2.2. Scenic amenity and lighting

Description of environmental values

Describe, in general terms, the existing character of the landscape and the general impression that would be obtained while travelling through and around it. Outline existing landscape features, panoramas and views that have, or could be expected to have, value to the community. Include information such as maps and photographs, particularly where addressing the following issues:

- major views, view sheds, outlooks, and features contributing to the amenity of the area, including assessment from private residences
- focal points, landmarks, waterways and other features contributing to the visual quality of the area and the project site
- character of the local and surrounding areas including vegetation and land use.

Include any relevant World Heritage and National Heritage values of the area.

Potential impacts and mitigation measures

Describe the potential beneficial and adverse impacts of the project on landscape character and visual qualities of the site and the surrounding area. Explain what measures will be undertaken to avoid or mitigate the identified impacts.

Provide an assessment of all potential impacts of the project's lighting, during all stages, with particular reference to objectives to be achieved and management methods and strategies to be implemented to avoid or mitigate, such as:

- the visual impact at night
- night operations/maintenance and effects of lighting on residents and terrestrial and marine fauna
- the potential impact of increased vehicular and marine traffic
- changed habitat conditions for nocturnal fauna and associated impacts.

5.2.3. Topography, geology and soils

Description of environmental values

Provide maps locating the project in state, regional and local contexts. The topography should be detailed with contours at suitable increments, shown with respect to AHD. Include significant features of the landscape and topography, and accompanying comments on the maps.

Provide a description, map and a series of cross-sections of the geology of the project area relevant to the project components.

Assess the potential for acid sulfate soils in accordance with:

- Queensland Acid Sulfate Soil Technical Manual (see www.derm.qld.gov.au/land/ass/products.html)
- *Guidelines for Sampling and Analysis of Lowland Acid Sulfate Soils (ASS) in Queensland 1998* (Ahern et al. 1998)

- State Planning Policy 2/02: Planning and Managing Development Involving Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002a)
- State Planning Policy 2/02 Guideline: Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002b).

Provide geotechnical information on the soils' stability and suitability for construction of project facilities.

Where necessary identify any exemptions under the *Strategic Cropping Land Act 2011* or State Planning Policy 1/12: Conservation of Strategic Cropping Land (Department of Environment and Resource Management 2012b) that apply to Strategic Port Land.

Provide a map and description of:

- the location of key tidal planes such as:
 - highest astronomical tide
 - mean high water spring tide
 - mean high water neap tide
 - mean sea level
 - mean low water neap tide
 - mean low water spring tide
 - lowest astronomical tide
- the bathymetry of the project area and surrounds
- relevant coastal geomorphology, characterised and supported by illustrative mapping.

Potential impacts and mitigation measures

Provide details of any potential impacts to the topography or geomorphology associated with the project and proposed mitigation measures, including:

- a discussion of the project in the context of major topographic features and any measures taken to avoid or minimise impact to such.

Identify any erosion management techniques to be used. Provide details of an erosion monitoring program (including rehabilitation measures for erosion problems identified during construction), and detail acceptable mitigation strategies. Summarise methods proposed to prevent or control erosion with regard to:

- the *Soil Erosion and Sediment Control—Engineering Guidelines for Queensland Construction Sites* (Institution of Engineers Australia 1996)
- the *Guideline: EPA Best Practice Urban Stormwater Management—Erosion and Sediment Control* (Environmental Protection Agency 2008a)
- preventing soil loss in order to maintain land capability/suitability
- preventing degradation of local waterways.

Discuss the potential for acid generation from disturbance of acid sulfate soils during earthworks and construction, and propose measures to manage soils and mitigate impacts for all site earthworks and construction activities. Should action criteria be

triggered by acid generating potential as a result of testing, provide a site-specific acid sulfate soils management plan prepared in accordance with:

- Queensland Acid Sulfate Soil Technical Manual (see www.derm.qld.gov.au/land/ass/products.html)
- State Planning Policy 2/02: Planning and Managing Development Involving Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002a)
- State Planning Policy 2/02 Guideline: Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002b).

5.3. Coastal environment

Describe the existing coastal environment that may be affected by the project in the context of coastal values identified in the Queensland State of the Environment reports and environmental values as defined by the EP Act and environmental protection policies.

Identify actions associated with the project that are assessable development within the coastal zone and will require assessment under the provisions of the Coastal Act.

Assess the project's consistency with the relevant policies of the Draft Coastal Protection State Planning Regulatory Provision (Department of State Development, Infrastructure and Planning 2012).

Describe any shipwrecks or potential to discover shipwrecks or articles from shipwrecks in the area.

Note the Maritime Heritage Section of the Australian Government Department of Sustainability, Environment, Water, Population and Communities (SEWPaC) is responsible for administering the Commonwealth *Historic Shipwrecks Act 1976*.

It should be noted that the jurisdiction of the *Historic Shipwrecks Act 1976* is not limited to Commonwealth marine areas, as defined by the EPBC Act, because the Historic Shipwrecks Act has jurisdiction within the coastal waters of the Australian states and territories, extending to the point of lowest astronomical tide.

5.3.1. Hydrodynamics and sedimentation

Description of environmental values

Assess the physical and chemical characteristics of sediments within the marine zone adjacent to the project area.

Describe the physical processes of coastal environment related to the project including:

- waves
- currents
- tides
- storm surges
- freshwater flows

- the key influencing factors of cyclones and other severe weather events and their interaction in relation to the assimilation and transport of pollutants entering marine waters from, or adjacent to, the project area.

Describe the environmental values of the coastal resources of the affected area in terms of the physical integrity and morphology of landforms created or modified by coastal processes.

Describe the tidal hydrodynamics of the project area and the adjoining tidal waterways in terms of water levels (including flushing characteristics and wave processes) and current velocities and directions at different tidal states. Two and/or three-dimensional modelling should be undertaken. Provide details of water levels and flows associated with historical and predicted storm surges.

Describe the wave climate in the vicinity of the project area and the adjacent beaches including inter-annual variability and details of historical and predicted extreme wave conditions generated by tropical cyclones or other severe storm events.

Describe the hydrology of the area and the adjacent catchments of the rivers and the associated freshwater flows within the study area and the adjoining tidal waterways in terms of water levels and discharges and possible stratification.

Predict the likely changes to hydrodynamics (including water levels, currents, wave conditions and freshwater flows) and sedimentation in the project area due to climate change.

Describe the sediment transport dynamics, including sediment budgets, in the project area and adjacent coastline detailing all sinks and sources into and out of this region that influence sediment transport rates and pathways. This should include transport mechanisms during persistent and extreme conditions showing gross and net transport rates. All influencing coastal processes should be investigated through a combination of 1d, 2d and/or 3d numerical modelling.

Potential impacts and mitigation measures

Describe the potential changes to the hydrodynamic processes and local sedimentation resulting from the construction and operation of the project. This should include:

- impacts on tidal flows and water levels, (including flood levels)
- changes to sediment transport patterns in the inlet, including the potential of the proposal to impact on bank erosion and/or bed degradation within the inlet, and to alter or hinder transport pathways

This assessment should also discuss the potential impacts associated with vulnerability of the project to storm tide flooding and the potential of the project to affect vulnerability to storm tide flooding on adjacent properties.

When assessing the hydrodynamics of the area and movement of sediment along the coast, consider coastal processes such as erosion and accretion at adjacent locations.

Detail the impacts of the existing dredged channel and deposition site on coastal processes and sediment transport dynamics, including siltation rates and the long term fate of material deposited in the spoil area.

All numerical modelling to be undertaken to describe the hydrodynamic and sedimentation aspects of the project area and adjacent coastline will be calibrated and validated against measured data within the project area.

Assess the siltation rates of the dredged channel material and long term fate of the deposition area including the likelihood of acid sulfate soils drifting onto the adjacent beaches.

Describe the duration and extent of turbidity plumes from capital and maintenance dredging and deposition on the waterways and adjacent coastline. Describe this in relation to the background clarity of the receiving waters.

5.3.2. Water quality

Description of environmental values

Provide reliable baseline information and detailed historical data (where relevant) on water quality of local coastal waters and other water types (as defined in EPP (Water)) potentially affected by the proposed activity that incorporates the effects of seasonal and tidal variation and that is in accordance with *Queensland Water Quality Guidelines* (Department of Environment and Resource Management 2009a) and *Australian and New Zealand Guidelines for Fresh and Marine Water Quality* (ANZECC Guidelines) (Australian and New Zealand Environment and Conservation Council & Agriculture and Resource Management Council of Australia and New Zealand 2000) methodologies. This information should include (but is not limited to) biological, physiochemical water quality parameters such as dissolved oxygen pH, dissolved and particulate nutrients and organic carbon, temperature, salinity, total suspended solids, turbidity, light attenuation (photosynthetically active radiation) sedimentation rates. It should also include baseline information on toxicants, such as oil in water, total and dissolved metals and metalloids, ammonia, and any other relevant contaminants, such as pesticides in catchments with moderate or high degree of agricultural activities.

Potential impacts and mitigation measures

Define and describe the water quality objectives and practical measures for protecting, mitigating or enhancing coastal environmental values. This includes how nominated quantitative standards and indicators may be achieved, and how the achievement of the water quality objectives will be monitored, audited and managed. The potential environmental harm caused by the project on coastal resources and processes shall be described in the context of controlling such effects. State Planning Policy 2/02: Planning and Managing Development Involving Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002) should be addressed as should the Queensland Coastal Plan (Department of Environment and Resource Management 2012a).

Specific issues to be addressed include:

- the water quality objectives used (including how they were developed), and how predicted activities will meet these objectives—refer to:
 - *Queensland Water Quality Guidelines 2009* (Department of Environment and Resource Management 2009a)

- ANZECC Guidelines (Australian and New Zealand Environment and Conservation Council & Agriculture and Resource Management Council of Australia and New Zealand 2000)
- potential threats to the water quality and sediment quality of the coastal environment for the entire area that will be subject to increased levels of suspended sediments and sedimentation as identified through sediment plume modelling.

For any land based disposal options for dredge spoil develop baseline water quality guideline values and investigate potential risks associated with surface and groundwater quality for likely discharge, runoff or seepage waters from any dredge spoil structures using the ANZECC Guidelines (Australian and New Zealand Environment and Conservation Council & Agriculture and Resource Management Council of Australia and New Zealand 2000).

This assessment shall consider, at minimum:

- dredging and dredge material disposal, including disturbance of fine-grained sediments and contaminated material
- potential accidental discharges of contaminants during construction and operation of the facility
- release of contaminants from marine structures and vessels, including potential for introducing marine pests
- stormwater run-off from the facilities and associated infrastructure
- flooding of relevant river systems and other extreme events.

Describe strategies for protecting Ramsar wetlands; and discuss any obligations imposed by state or Commonwealth legislation or policy, or international treaty obligations (that is, JAMBA, CAMBA and ROKAMBA).

5.3.3. Sediment quality and dredging

Provide baseline information on marine sediments and sediment quality in the area likely to be disturbed by dredging or vessel movements including contaminants (such as heavy metals, nutrients and pesticides), the presence of fines and/or indurated layers and acid sulfate potential. Present this information as a map of sediment types based on their physical and chemical properties and include depth profiles.

Assessment of marine sediments should be undertaken in accordance with the *National Assessment Guidelines for Dredging* (Commonwealth of Australia 2009).

Provide data on management and monitoring of current maintenance dredging in the project area including an analysis of residual impacts to water quality, turbidity, sedimentation to support the statement of potential impact of proposed capital and maintenance dredging for the project.

Detail specific measures to maintain sediment quality to nominated quantitative standards within the project and surrounding areas, particularly where future maintenance dredging may be required.

Comment on the choice of the disposal site in relation to coastal management outcomes, having regard to the nature of the spoil, cost of alternatives and potential impacts on coastal resources and their values.

Describe provisions for dredge material disposal and associated impacts on sediment quality. Discuss disposal options for contaminated material, if required. This must include a description of the arrangements to be put in place for long-term (20 years) dredge material disposal including details of proposed material placement areas.

5.4. Nature conservation

Detail the existing nature conservation values that may be affected by the proposal. Describe the environmental values in terms of:

- integrity of ecological processes, including habitat of endangered, vulnerable and near-threatened (EVNT) and special least-concern species
- conservation of resources
- biological diversity, including habitat of EVNT and special least-concern species
- integrity of landscapes and places including wilderness and similar natural places
- aquatic and terrestrial ecosystems
- seasonal variation in fauna and flora populations.

Survey effort should be sufficient to identify, or adequately extrapolate, the floral and faunal values over the range of seasons, particularly during and following a wet season. The survey should account for the ephemeral nature of watercourses traversing the proposal area, and seasonal variation in fauna populations.

Provide flora and fauna assessments of any dredge spoil storage and/or treatment areas where native vegetation is to be disturbed.

Where necessary, seek the involvement of the local Indigenous community in conducting field observations and survey activities, to identify the traditional and contemporary Indigenous uses of species.

Also outline the proposed strategies to avoid, or minimise and mitigate, impacts on the identified values within the project's footprint.

Identify key flora and fauna indicators for ongoing monitoring.

5.4.1. Sensitive environmental areas

Description of environmental values

On a map of suitable scale, identify areas that are environmentally sensitive within the study area in proximity to the project. This should include areas classified as having national, state, regional or local biodiversity significance, or flagged as important for their integrated biodiversity values. Refer to Queensland legislation and policies on threatened species and ecological communities.

The study area is the area that is potentially impacted by the development including sediment plume and tidal prism.

Areas regarded as sensitive with respect to flora and fauna have one or more of the following features, and should be identified and mapped:

- important habitat of species listed under the NC Act
- regional ecosystems (REs) listed as 'endangered' or 'of concern' under state legislation
- good representative examples of remnant REs or REs that are described as having 'medium' or 'low' representation in the protected area estate as defined in the Regional Ecosystem Description Database (REDD) available at www.ehp.qld.gov.au
- sites containing near-threatened or bio-regionally significant species or essential, viable habitat for near-threatened or bio-regionally significant species
- areas or features identified as State significant biodiversity values, pursuant to the Queensland Biodiversity Offset Policy (version 1) (Department of Environment and Resource Management 2011b)
- sites recorded on the National Directory of Important Wetlands in Queensland (Blackman et al. 1999)
- sites adjacent to nesting beaches, feeding, resting or calving areas (for example, marine turtles, dugongs and cetaceans)
- sites containing common species that represent a distributional limit and are of scientific value or that contain feeding, breeding, resting areas for populations of species of special cultural significance
- sites of high biodiversity that are of a suitable size or with connectivity to corridors and protected areas to ensure survival in the longer term; such land may contain:
 - natural vegetation in good condition or other habitat in good condition (for example, wetlands)
 - degraded vegetation or other habitat that still support high levels of biodiversity or act as an important corridor for maintaining high levels of biodiversity in the area
- a site containing other special ecological values (for example, high habitat diversity and areas of high endemism)
- ecosystems that provide important ecological functions such as:
 - wetlands of national, state and regional significance
 - coral reefs
 - riparian vegetation
 - important buffer to a protected area or important habitat corridor between areas
- declared fish habitat areas and sites containing protected marine plants under the Fisheries Act
- sites of geomorphological significance
- areas of environmental significance as defined by the *Queensland Coastal Plan* (Department of Environment and Resource Management 2012a)
- protected areas that have been proclaimed under the NC Act and Marine Parks Act, or are under consideration for proclamation
- declared areas of major interest or critical habitat declared under the NC Act

- declared areas of high nature conservation value or areas vulnerable to land degradation under the VM Act
- remnant vegetation listed under the VM Act as containing endangered and of-concern regional ecosystems where clearing is likely to result in land degradation and a loss of ecosystem function and biodiversity.

Identify the need to develop and implement a mitigation and management strategy for exotic marine pest species including baseline reports and monitoring programs.

This should take into account the National System for the Prevention and Management of Marine Pest Incursions; *Australian Marine Pest Monitoring Manual* (Australian Government Department of Agriculture, Fisheries and Forestry 2010a) and Australian marine pest monitoring guidelines (Australian Government Department of Agriculture, Fisheries and Forestry 2010b) or latest editions.

Areas of special sensitivity include the marine environment and wetlands, wildlife breeding or roosting areas, any significant habitat or relevant bird flight paths for migratory species and habitat of threatened plants, animals and communities.

Potential impacts and mitigation measures

Discuss the impact of the project on species, communities and habitat of local, regional or state significance in sensitive environmental areas as identified above.

Demonstrate how the project would comply with the following hierarchy:

- avoiding impact on areas of remnant vegetation and other areas of conservation value including the habitat of listed species
- mitigating impacts through rehabilitation and restoration including, where relevant, a discussion of any relevant previous experience or trials of the proposed rehabilitation
- replacing or offsetting the loss of conservation values, where impacts cannot be avoided or mitigated.

Explain why the measures above may not apply in areas where loss would occur.

Discuss the boundaries of the areas impacted by the project within or adjacent to an ecological community, including details of footprint width. If the project area will impact upon an endangered ecological community, include reasons for the preferred alignment and the viability of alternatives.

Describe strategies for protecting Ramsar wetlands and discuss any obligations imposed by state or Commonwealth legislation or policies, or international treaty obligations (that is, China–Australia Migratory Bird Agreement (CAMBA), Japan–Australia Migratory Bird Agreement (JAMBA), Republic of Korea–Australia Migratory Bird Agreement (ROKAMBA)).

Provide details about the approvals that will be required under the NC Act and the VM Act for development made assessable under SPA. The EMP for the project should address the performance requirements of the relevant policies and regional vegetation management codes (refer to www.derm.qld.gov.au/vegetation/regional_codes.html).

Where relevant, this section should discuss environmental offset requirements in accordance with the Queensland Government Environmental Offsets Policy (Environmental Protection Agency 2008b) and take into account the applicable specific-issue offset policies, as follows:

- State Policy for Vegetation Management (Department of Environment and Resource Management 2009b)
- Policy for Vegetation Management Offsets (Department of Environment and Resource Management 2011a)
- Queensland Biodiversity Offset Policy (Department of Environment and Resource Management 2011b)
- Marine fish habitat offset policy (FHMOP 005.2) (Department of Agriculture, Fisheries and Forestry 2012)

Describe any departure from 'no net loss' of ecological values.

5.4.2. Terrestrial fauna

Description of environmental values

Describe any terrestrial and riparian fauna occurring in the areas affected by the proposal, noting the broad distribution patterns in relation to vegetation, topography and substrate. The description of the fauna present or likely to be present in the study area should include:

- species diversity (that is, a species list) and abundance of animals of recognised significance
- any species that are poorly known but suspected of being rare or threatened
- habitat requirements and sensitivity to changes, including movement corridors and barriers to movement
- the existence of feral pest or introduced animals including those of economic or conservation significance
- existence (actual or likely) of any species and communities of conservation significance in the study area, including discussion of range, habitat, breeding, recruitment feeding and movement requirements, and current level of protection (for example, any requirements of protected area management plans or threatened species recovery plans)
- habitat requirements and sensitivity to changes, including movement corridors and barriers to movement
- an estimate of commonness or rarity for the listed or otherwise significant species
- use of the area by migratory fauna
- records in a form compatible with the Wildlife Online database.

Identify any species listed by the NC Act occurring in the project area. Identify any species listed by the 'Back on Track' species prioritisation methodology (refer to: www.ehp.qld.gov.au/wildlife/prioritisation-framework/index.html).

Indicate how well any affected communities are represented and protected elsewhere in the bio-region where the project occurs. Specify the methodology used for fauna

surveys. Provide relevant site data to DEHP in a format compatible with the Wildlife Online database for listed threatened species (refer to: www.ehp.qld.gov.au/wildlife/wildlife-online/index.html).

Fauna survey methodology should be in accordance with the *Terrestrial Vertebrate Fauna Survey Assessment Guidelines for Queensland* (Eyre et al. 2012) (refer to: http://www.ehp.qld.gov.au/ecosystems/biodiversity/pdf/fauna_survey_guidelines.pdf)

Potential impacts and mitigation measures

Consider potential impacts on terrestrial fauna, relevant wildlife habitat and other fauna conservation values, including:

- impact and contribution by the project, to the entry, spread and establishment of pests (terrestrial and marine) not present in the project area²⁴
- impacts due to loss of range/habitat, food supply, nest sites, breeding/recruiting potential or movement corridors or as a result of hydrological change
- impacts on native species, particularly species of conservation significance
- cumulative effects of direct and indirect impacts
- threatening processes leading to progressive loss
- a description of any foreseen impacts that increase the susceptibility of ecological communities and species to the impacts of climate change.

Address any actions of the project or likely impacts that require an authority under the NC Act. Provide the following information on mitigation strategies:

- measures to avoid and mitigate the identified impacts. Any provision for buffer zones and movement corridors, nature reserves or special provisions for migratory animals should be discussed and coordinated with the outputs of the flora assessment
- measures to stop the spread, encroachment or establishment of pests within the project area
- details of the methodologies that would be used to avoid injuring native fauna as a result of the project's construction and operational works, and if accidental injuries should occur, the methodologies to assess and handle injuries
- strategies for complying with the objectives and management practices of relevant recovery plans
- measures to rehabilitate disturbed areas, which incorporate provision of nest hollows and ground litter, where appropriate.

Outline how these measures will be implemented in the EMP for the project.

Address feral animal management strategies and practices. The study should develop strategies to ensure that the project does not contribute to increased encroachment of any feral animal species. Refer to the local government authority's pest management plan and any strategies and plans recommended for the project area by Biosecurity Queensland. Discuss the strategies in accordance with the provisions of the *Land Protection (Pest and Stock Route Management) Act* in the main body of the EIS and in the pest management plan within the EMP for the project.

5.4.3. Aquatic

Description of environmental values

Describe the aquatic flora and fauna present, or likely to be present, in the areas affected by the project. Include:

- fish species, mammals, reptiles, amphibians, crustaceans and aquatic invertebrates occurring in the waterways within the affected area and any associated wetlands (as defined under section 5 of the Fisheries Act)
- any rare or threatened aquatic and marine species
- exotic and pest marine organisms
- a description of the habitat requirements and the sensitivity of aquatic species to changes in flow regime, water levels and water quality in the project areas
- aquatic plants, including native, exotic and weed species
- aquatic substrate
- habitat downstream of the project or potentially impacted due to currents in associated lacustrine and marine environments
- stream type, including extent of tidal influence and common levels such as highest astronomical tide and mean high water springs
- reef habitat and coral species
- any other state significant biodiversity values identified in the Queensland Biodiversity Offset Policy (version 1) (Department of Environment and Resource Management 2011b) that are not described elsewhere.

Describe any wetlands listed by DEHP as areas of national, state or regional significance and detail their values and importance for aquatic flora and fauna species.

Description of environmental values

Flora

Define the nature and extent of existing marine features and marine vegetation (e.g. salt couch, seagrass and mangroves) within the proposed area of development and in the areas adjacent to the project.

Conduct field assessments for potentially affected plant species, preferably in both pre- and post-wet season conditions taking into account potential impact processes, as follows:

- record site data in a form compatible with the Queensland Herbarium CORVEG database
- record a complete list of species present at each site, including those species defined and protected under the Fisheries Act
- record the relative abundance of plant species present
- identify any plant species of conservation, cultural, commercial or recreational significance

- submit specimens of species listed as protected plants under the Nature Conservation (Wildlife) Regulation 1994 (other than common species) to the Queensland Herbarium for identification and entry into the HERBRECS database.

Fish habitat

Describe the nature and extent of fish habitat that have the potential to be impacted, including seagrass (permanent and ephemeral), macro-algae, mangrove and salt couch communities and sand bars/mudflats, mapped relative to existing features for reference.

Surveys for seagrass and algae should reflect the seasonal variation in occurrence and density of these communities. The location and density of marine plants should be mapped at an appropriate scale.

Show the location of any declared Fish Habitat Areas proximal to the proposed dredging site and marine infrastructure for transportation of fill.

Marine megafauna

Describe the turtle species that may use beaches near the proposed development area.

Undertake a desktop review of information on the turtle communities of the study area, particularly the green, hawksbill, loggerhead, olive ridley and flatback turtles, paying specific attention to any anecdotal or recorded information on turtle populations frequenting the port area and any known nesting sites.

Refer to studies of the turtle populations and consult the Department of National Parks, Recreation, Sport and Racing (DNPRSR) on historical data for the area, particularly on previously conducted nesting surveys.

Consolidate available information on vessel strike data for the project area, and evaluate the proposed project (construction and ongoing operations) using a risk based methodology informed by data obtained on the populations of marine fauna.

Use this information to develop recommendations on the most appropriate management measures to be adopted to minimise the risk of turtle injury or death. Particular reference should be given to protecting turtles from boat strike.

Benthic macro invertebrates

Describe the benthic macro invertebrate communities likely to be directly or indirectly impacted by the project should be characterised for the assessment of the potential impacts of proposed capital works. Consider the effect of ongoing maintenance activities, including dredging, on benthic fauna.

Reef communities

Describe the reef communities that may be impacted by the proposed development.

Potential impacts and mitigation measures

Discuss the potential impacts of the project on the aquatic species and ecosystems and describe proposed mitigation actions, including:

- potential impacts to flora and fauna communities from dredging works and transporting marine fill to the project site. This should include modelling of the potential impacts of the dredge plume (for example, increased turbidity) on seagrass and other aquatic species
- potential impacts due to alterations to the long-term hydrodynamic processes of the coastal environments, with specific reference to impacts on riparian vegetation and other sensitive vegetation communities, including mangrove stands and seagrass meadows
- investigate the projects potential impact on fish spawning periods
- offsets proposed for unavoidable, permanent loss of fisheries habitat
- methods to minimise the potential for introducing or spreading pest species within the project area and include the mitigation and management approaches within the biosecurity environmental management plan
- monitoring aquatic biology health, productivity and biodiversity in areas subject to direct discharge
- measures to be implemented to avoid or minimise ship strike and propeller strike during construction, commissioning and operation of the project
- potential impacts from climate change and the project's potential to increase the susceptibility of aquatic ecological communities and species, for example, coral bleaching.

Address any actions of the project or likely impacts that require an authority under the relevant legislation, including the NC Act and/or the Fisheries Act. Outline how these measures will be implemented in the overall EMP for the project.

Provide details of the management methods which would avoid or minimise impacts on birds, marine mammals, turtles and fish, including migrations and marine plant propagation. In particular, present a discussion of existence (actual or likely) of any species and communities of conservation significance in the study area, including discussion of range, habitat, breeding, recruitment feeding and movement requirements, and current level of protection (for example, any requirements of protected area management plans or threatened species recovery plans, including, but not restricted to direct references to all relevant turtle species included in the *Recovery Plan for Marine Turtles in Australia* (Commonwealth of Australia 2003).

Outline how these measures will be implemented in the EMP for the project.

5.5. Water resources

5.5.1. Description of environmental values

Provide an overview of the quality and quantity of any water resources in the vicinity of the project area and the relevance to the project.

5.5.2. Potential impacts and mitigation measures

Assess the project's potential impacts on water resource environmental values identified in the previous section. Define and describe the objectives and practical measures for protecting or enhancing water resource environmental values, to describe

how nominated quantitative standards and indicators may be achieved, and how the achievement of objectives will be monitored, audited and managed. Include the following:

- potential impacts on the flow and the quality of surface and groundwater from all phases of the project, with reference to their suitability for the current and potential downstream uses and discharge licences
- an assessment of all likely impacts on groundwater depletion or recharge regimes
- potential impacts of surface water flow on existing infrastructure, with reference to the EPP (Water) and the Water Act
- chemical and physical properties of any wastewater (including stormwater at the point of discharge into natural surface waters), and the toxicity of effluent to flora and fauna
- potential impacts on other downstream receiving environments, if it is proposed to discharge water to a riverine system
- where disposal of dredge spoil to land is being considered, the use of the ANZECC Guidelines methodology is required to derive water quality trigger values and investigate surface and groundwater quality of the receiving environment that are likely to receive discharge, runoff or seepage waters from any dredge spoil storage/treatment or disposal area
- the results of a risk assessment for uncontrolled releases to water due to system or catastrophic failure, implications of such emissions for human health and natural ecosystems, and strategies to prevent, minimise and contain impacts
- an assessment of the potential to contaminate surface and groundwater resources and measures to prevent, mitigate and remediate such contamination
- details of a monitoring program for the groundwater resources, using existing deep bores, to establish the base line yield and water quality of the supply from those bores
- Provide details on how changes in water quality in Trinity Inlet, as a result of dredging will affect local aquaculture ventures.

Strategies should be adequately detailed to demonstrate best practice management and that environmental values of receiving waters will be maintained to nominated water quality objectives. Describe the monitoring programs that will assess the effectiveness of management strategies for protecting water resources during the construction, operation and decommissioning of the project. Outline how these strategies are incorporated into appropriate sections of the EMP.

5.6. Air quality

5.6.1. Description of environmental values

Describe the existing air quality that may be affected by the project in the context of environmental values as defined by the EP Act and Environmental Protection (Air) Policy 2008 (EPP (Air)).

Discuss the existing local and regional air shed environment, including:

- background levels and sources of particulates, gaseous and odorous compounds and any major constituent
- pollutants (including greenhouse gases)
- baseline monitoring results, sensitive receptors.

Data on local meteorology and ambient levels of pollutants should be gathered to provide a baseline for later studies or for the modelling of air quality environmental harms.

Parameters should include air temperature, wind speed and direction, atmospheric stability, mixing depth and other parameters necessary for input to the models.

5.6.2. Potential impacts and mitigation measures

Consider the following air quality issues and their mitigation:

- an inventory of air emissions from the project expected during construction and operational activities (including source, nature and levels of emissions)
- ‘worst case’ emissions that may occur during operation. If these emissions are significantly higher than those for normal operations, it will be necessary to separately evaluate the worst-case impact to determine whether the planned buffer distance between the facility and neighbouring sensitive receptors will be adequate
- ground level predictions should be made at any site that includes the environmental values identified by the EPP (Air), including any sites that could be sensitive to the effects of predicted emissions
- dust and odour generation from construction activities, especially in areas where construction activities are adjacent to existing road networks or are in close proximity to sensitive receivers
- climatic patterns that could affect dust generation and movement
- vehicle emissions and dust generation along major haulage routes both internal and external to the project site
- human health risk associated with emissions from project activities of all hazardous or toxic pollutants
- impacts on terrestrial flora and fauna.

Detail the best practice mitigation measures together with proactive and predictive operational and maintenance strategies that could be used to prevent and mitigate impacts.

Discuss potential air quality impacts from emissions, with reference to the National Environmental Protection (Ambient Air Quality) Measure 2003 (Cwlth) and the EPP (Air). If an emission is not addressed in these legislative instruments, discuss the emission with reference to its risk to human health, including appropriate health-based guidelines/standards.

5.7. Greenhouse gas emissions

5.7.1. Description of environmental situation

Provide an inventory of projected annual emissions for each relevant greenhouse gas, with total emissions expressed in 'CO₂ equivalent' terms for the following categories:

- scope 1 emissions—means direct emissions of greenhouse gases from sources within the boundary of the facility and as a result of the facility's activities (including emission from vegetation clearing)
- scope 2 emissions—means emissions of greenhouse gases from the production of electricity, heat or steam that the facility will consume, but that are physically produced by another facility.

Briefly describe method(s) by which estimates were made.

Use the *National Greenhouse Accounts (NGA) Factors* (Commonwealth of Australia 2010c) as a reference source for emission estimates, supplemented by other sources where practicable and appropriate. As a requirement of the NGA factors, estimates should include the loss of carbon sink capacity of vegetation due to clearing and impoundment.

5.7.2. Potential impacts and mitigation measures

Discuss the potential for greenhouse gas abatement measures, including:

- the proposed measures (alternatives and preferred) to avoid and/or minimise direct greenhouse gas emissions
- how the preferred measures minimise emissions and achieve energy efficiency
- any opportunities to further offset greenhouse gas emissions through indirect means including sequestration and carbon trading.

5.8. Noise and vibration

5.8.1. Description of environmental values

Describe the existing noise and vibration environment that may be affected by the project in the context of the environmental values defined by the Environmental Protection (Noise) Policy 2008 (EPP (Noise)). Refer to the following documents:

- *Noise Measurement Manual* (Environment Protection Agency 2000)
- *Guideline: Planning for Noise Control* (Environmental Protection Agency 2004)

Identify sensitive noise receptors adjacent to all project components both in air and underwater (e.g. marine species sensitive to underwater noise) and estimate typical background noise and vibration levels based on surveys at representative sites.

Discuss the potential sensitivity of such receptors and nominate performance indicators and standards.

5.8.2. Potential impacts and mitigation measures

Describe the impacts of noise and vibration both in air and underwater generated during the pre-construction, construction, operational and decommissioning phases of the project. Noise and vibration impact analysis should include:

- the levels of noise and vibration generated, including noise contours, assessed against current typical background levels, using modelling (such as Environmental Noise Model e.g., SoundPLAN) where appropriate
- impact of noise, including low frequency noise (noise with components below 200 Hz) and vibration at all potentially sensitive receivers (for example, residences, social and public infrastructure, such as health, recreational and educational facilities and marine life where impact of noise may have a significant biological significance) compared with the performance indicators and standards nominated above in Section 5.8.1
- impact on terrestrial, avian and aquatic fauna
- proposals to minimise or eliminate these effects, including details of any screening, lining, enclosing or bunding of facilities, or timing schedules for construction and operations that would minimise environmental harm and environmental nuisance from noise and vibration both in air and/or underwater
- options for air sensitive receptors that are otherwise unable to achieve a satisfactory internal noise level for the preservation of health and wellbeing as identified within the EPP (Noise).

Provide details of any night-time work that may be undertaken. Specifically include:

- the reasons why night-time work may be undertaken
- the likely duration of work (if known)
- the proposed hours of the work
- the nature of the work to be undertaken
- the likely impact on residents and the associated mitigation measures to be undertaken by the proponent
- the methods that will be used to communicate with affected residents.

5.9. Waste

5.9.1. Waste generation

Identify and describe all sources, likely volumes and quality (where applicable) of waste associated with pre-construction, construction, operation and decommissioning of all aspects of the project. Refer to regulated waste listed in Schedule 7 of the Environmental Protection Regulation 2008 (Qld).

Describe:

- waste generated by delivery of material to site(s)
- all chemical and mechanical processes conducted on the construction sites that produce waste

- the amount and characteristics of solid and liquid waste produced on site by the project
- hazardous materials to be stored and/or used on site, including environmental toxicity data and biodegradability.

5.9.2. Waste management

Detail the proposed management of solid and liquid waste. Assess the potential impact of all waste generated during construction and operation, with regard for best practice waste management strategies, the Environmental Protection (Waste Management) Policy 2000 and the Environmental Protection (Waste Management) Regulation 2000 (Qld).

Provide details on marine plant impacts on the land area designated for on-ground soil disposal if a land disposal option is chosen.

5.10. Transport

If a terrestrial location is required for a land based spoil ground/dredge material placement area, provide a detailed traffic impact assessment report for all modes of transport. The EIS should clearly identify and assess all impacts associated with a land based dredge material placement area for all modes of transport and identify effective mitigation strategies for these impacts.

Present the transport assessment in separate reports for each project-affected mode (road, rail, air and sea) as appropriate for each phase of the project. These assessment reports should provide sufficient information to allow an independent assessment of how existing transport infrastructure will be affected by project transport at the local and regional level.

5.10.1. Existing infrastructure

Describe the extent, condition and capacity of the existing transport infrastructure on which the project will depend.

5.10.2. Transport activities and routes

Provide a summary of all the freight tasks (inputs and outputs, including wastes) associated with all phases of the project. The summary will be in tabular form (or other suitable format) and include for each freight task:

- tonnage/volume
- proposed transport methodologies (modes, vehicle types, payloads)
- estimates of the number of discrete trips required for reach task
- origins of inputs and destinations of outputs (including wastes)
- cross reference to the relevant section in the EIS where the task is fully described and/or assessed.

For each mode of transport and each phase of the project, provide traffic generation information on:

- existing background traffic including volumes, composition, peak traffic and peak times along the transport routes to and from the project
- background traffic growth for the transport routes for all stages of the project life
- the construction of any project-related plant and utilities within or impacting on the jurisdiction of any transport authority
- the stages, timing and duration of each stage/phase and how these impact on the transport-related infrastructure
- comparison of the traffic situation and road conditions with and without the project
- expected volumes of project inputs and outputs of transported raw materials, plant, construction materials and operational equipment, waste, hazardous goods and finished products for all phases of the project
- how identified project inputs and outputs will be moved through the local and regional transport network (including number and type of vehicles, mode, volume, composition, trip timing and routes)
- traffic generated by workforce personnel including visitors (volume, composition, timing and routes)
- likely heavy, oversize and indivisible loads (volume, composition, timing and routes) highlighting any vulnerable bridges and structures along proposed routes.

Describe:

- access locations (existing and proposed) to state-controlled roads
- locations of proposed road-crossing points of existing and proposed rail infrastructure associated with the project.

Presentation of data is to be in a format similar to A Road Management Information System (ARMIS).

5.10.3. Potential impacts and mitigation measures

Impact assessment reports should include details of the adopted assessment methodology (for impacts on roads: the road impact assessment report in accordance with the *Guidelines for Assessment of Road Impacts of Development*) (Department of Main Roads 2006). Assessment of traffic impacts is to include the transport arrangements for permanent and temporary workforce associated with all phases of the project.

Assess project impacts on:

- local and state-controlled road networks, including key road and road/rail intersections, at project construction, operation and decommissioning stages. Any impact to level crossings should be assessed using the Australian Level Crossing Assessment Model (ALCAM)
- capacity, safety, local amenity, efficiency and condition of transport operations, services and assets from either transport or project operations, including an assessment of pavement life of the road network as a result of the project. Refer,

where relevant, to the *Queensland Road Safety Action Plan 2010–2011* (Department of Transport and Main Roads 2010)

- possible interruptions to transport operations
- the natural environment within the jurisdiction of an affected transport authority (for example, road and rail corridors)
- the nature and likelihood of product-spill to both land and marine environments during transport, if relevant
- any existing or proposed strategies for public passenger transport and active transport and address, where relevant, requirements of Part 2A of the Transport Planning and Coordination Act
- access to transport for people with a disability
- transport and handling of hazardous substances and dangerous goods
- the cumulative impact of this project adding to the impact of other known proposed or current major projects impacting on the road network.

5.10.4. Infrastructure alterations

Detail:

- any proposed alterations or new transport-related infrastructure and services required by the project (as distinct from impact mitigation works)
- construction of any project-related plant and utilities, within or impacting on the jurisdiction of any transport authority.

5.10.5. Transport impact management strategies

Discuss and recommend how identified impacts will be mitigated so as to maintain safety, efficiency and condition of each mode. These mitigation strategies are to be prepared in close consultation with relevant transport authorities (including local government), consider those authorities' works program and forward planning, and be in accordance with the relevant transport authorities' methodologies and design manuals.

Findings of studies and transport infrastructure impact assessments should be an input into preparing a transport management plan.

Road/rail management planning

Outline:

- procedures for assessing and agreeing on the scope of required mitigation works with road/rail corridor managers (for example, maintenance or upgrades), including any associated works, such as sourcing water and gravel
- strategies to minimise the effects of project transport on existing and future public road or rail corridors
- steps to be taken to prevent access from public roads/rail corridors to the project sites
- strategies to maintain safe access to public road/rail reserves to allow road/rail/pipeline maintenance activities

- process for decommissioning any temporary access to road/rail reserves, for example, stockpile sites

Findings of studies and transport infrastructure impact assessments should be an input into preparing a draft road-use management plan. Conditions of approval for transport management impacts should also be detailed in the EMP.

Shipping management planning

Develop management plans in accordance with the *Maritime Safety Queensland Guidelines for Major Development Proposals* (Department of Transport and Main Roads 2010).

Consult the Regional Harbour Master on maritime issues relating to moving and loading tankers and any barge operations (for example, dredging). Discuss the results of the consultation in the EIS.

Describe current vessels using the port and in the Commonwealth Marine Area, their size, shipping movements, anchorages, access to/from the port and navigational arrangements.

In regard to increased shipping volumes, address the following:

- potential for introduction of exotic organisms from increased shipping rates, including the Asian green mussel
- ballast water management arrangements—including Australian Quarantine and Inspection Service mandatory arrangements and agency contingency planning
- management of ship waste, in particular quarantine waste, domestic garbage, oil and sewage
- risk of spills and their management
- potential foreshore damage caused by tanker and tug activities
- potential for increased vessel strike to marine species
- potential impacts on existing shipping activity
- routes of ships in transit through port waters and the aligned infrastructure such as navigational aids.

Additional marine transport issues that should be considered include the potential of the proposal to impact on recreational craft.

5.11. Indigenous cultural heritage

5.11.1. Description of existing Indigenous cultural heritage values

Describe the existing Indigenous cultural heritage values that may be affected by the project and the environmental values of the cultural landscapes of the affected area in terms of the physical and cultural integrity of the landforms.

Explain the significance of artefacts, items or places of Indigenous cultural heritage value likely to be affected by the project at a local, regional, state and national level.

Also describe how, in conjunction with the appropriate Indigenous people, subject to confidentiality requirements, the cultural heritage values were ascertained. This could include:

- the results of any Aboriginal cultural heritage survey undertaken
- the DNRM Aboriginal Cultural Heritage Register and Database
- any existing literature relating to Indigenous cultural heritage in the project area.

5.11.2. Potential impacts and mitigation measures

To the greatest extent practicable, significant cultural heritage areas should be avoided by the project.

Provide an assessment of likely effects on sites of Indigenous cultural heritage values.

Define and describe the objectives and practical measures for protecting or enhancing Indigenous cultural heritage environmental values. Describe how nominated quantitative standards and indicators may be achieved for cultural heritage management, and describe how the achievement of the objectives will be monitored, assessed and managed.

As a minimum, impact assessment, management and protection strategies should satisfy statutory responsibilities and duties of care.

Native title agreement or cultural heritage management plan

During the EIS process, the proponent should initiate a native title agreement (NT agreement), as defined under the ACH Act, which includes management and protection strategies for Indigenous cultural heritage or a Cultural Heritage Management Plan (CHMP) under the ACH Act. An NT agreement or an approved CHMP in a form that complies with Part 7 of the ACH Act will ensure that the project meets the Aboriginal cultural heritage duty of care imposed by the ACH Act.

An NT agreement or CHMP should be negotiated between the proponent and the appropriate native title/Indigenous parties and should include the following:

- a process for including Indigenous people associated with the development areas in protecting and managing Indigenous cultural heritage
- processes for mitigating, managing and protecting identified cultural heritage sites and objects in the project areas, including associated infrastructure developments, during both the construction and operational phases of the project
- provisions for managing the accidental discovery of cultural material, including burials
- a clear recording process to assist initial management and recording of accidental discoveries
- a cultural heritage induction for project staff
- developing a cultural heritage awareness program to be incorporated into the contractor/employee manual and induction manual. This is to be in the form of a plain language, short document that is easy for contractors and staff 'on the ground' to understand

- a conflict resolution process.

If an NT agreement is not finalised or a CHMP has not been approved when the EIS is submitted to the Coordinator-General, the following must be provided:

- an outline of the draft CHMP or draft plan within the NT agreement that addresses management and protection strategies for cultural heritage, subject to any confidentiality provisions, outlining the position of the relevant parties
- details of the proposed steps and timeframes for finalising the CHMP or NT agreement.

5.11.3. Native title

Identify areas covered by applications for native title claims or native title determinations, providing boundary descriptions of native title representative body(ies), and whether it is necessary to notify the representative body(ies) or if there is evidence that native title does not exist.

Identify the potential for native title rights and interests likely to be impacted upon by the project and the potential for managing those impacts by an Indigenous land use agreement or other native title compliance outcomes.

5.12. Non-Indigenous cultural heritage

5.12.1. Description of existing non-Indigenous cultural heritage values

Include a cultural heritage study/survey that describes non-Indigenous cultural heritage sites and places, and their values.

Describe the significance of artefacts, items or places of conservation or non-Indigenous cultural heritage value likely to be affected by the project and their values at a local, regional, state and national level.

Any such study should be conducted by an appropriately qualified cultural heritage practitioner and should include the following:

- review of:
 - the Australian Heritage Places Inventory
 - the Queensland Heritage Register and other information regarding places of potential non-Indigenous cultural heritage significance
 - any local government heritage register
 - any existing literature relating to the heritage of the affected areas
- liaison with relevant community groups/organisations (for example, local historical societies) concerning places of non-Indigenous cultural heritage significance located or identified
- locations of culturally and historically significant sites, shown on maps, which could potentially be impacted by the project
- a constraints analysis of the proposed development area to identify and record non-Indigenous cultural heritage places.

5.12.2. Potential impacts and mitigation measures

Provide an assessment of any likely effects on sites of non-Indigenous cultural heritage values.

Provide strategies to mitigate and manage any negative impacts on non-Indigenous cultural heritage values and enhance any positive impacts.

As a minimum, investigation, consultation, impact assessment, management and protection strategies should satisfy statutory responsibilities and duties of care.

6. Social values and management of impacts

6.1. Description of existing social values

6.1.1. Social and cultural area

Conduct a social impact assessment and define the project's social and cultural area of influence, including the local, district, regional and state level as relevant, taking into account the:

- potential for social and cultural impacts to occur
- location of other relevant proposals or projects
- location and types of physical and social infrastructure, settlement and land use patterns
- social values that might be affected by the project (for example, integrity of social conditions, visual amenity and liveability, social harmony, public health and wellbeing, and sense of community)
- Indigenous social and cultural characteristics such as native title rights and interests, and cultural heritage.

6.1.2. Community engagement

Consistent with national and international good practice, and with regard to local and regional strategies for community engagement, the proponent should undertake a community engagement strategy to engage at the earliest practicable stage with likely affected parties to discuss and explain the project, and to identify and respond to issues and concerns regarding social impacts.

Detail the community engagement processes used to conduct open and transparent dialogue with stakeholders. Such processes should include, but not be limited to, community reference group forums. Include the project's planning and design stages and future operations including affected local and state authorities. Engagement processes should consider social and cultural factors, customs and values, and, where relevant, linkages between environmental, economic, and social impact issues.

Discuss engagement strategies and processes, including how complaint resolution will be addressed, for all stages of the project.

6.1.3. Workforce profile

The SIA should include a profile of the workforce that describes the following:

Workforce demand

The estimated composition of workforce by occupation, project stage and duration (including any planned construction prior to final investment decision) using the template provided at www.skills.qld.gov.au/significantprojects.aspx

Supply issues and strategies

- Analysis of relevant local, state and national workforce profiles and labour supply strategies and proposed programs for:
 - recruitment and attraction
 - population groups (including Indigenous people, women, secondary school students and unemployed and underemployed)
 - unskilled and semi-skilled labour requirements
 - structured training (apprenticeships, traineeships, graduates)
 - analysis of impact on local community workforce.
- Identify any gaps/opportunities in workforce planning particularly, tourism and hospitality skills and associated skills, in the short (3-5 years) and medium to longer term (5–15 years), with a particular focus on maritime skills and port-related activities.
- Particular reference should be made to the following documents:
 - *Tropical North Queensland Destination Tourism Strategy 2012–2016* (Tourism Tropical North Queensland and Tourism Queensland 2010)
 - *Tropical North Queensland Tourism Opportunity Plan 2010–2020* (Tourism Queensland 2010).

The fact sheet on Skills Queensland's website

(www.skills.qld.gov.au/significantprojects.aspx) provides essential information, contact and program details to develop the workforce management plan.

6.2. Potential impacts

Assess and describe the type, level and significance of the project's social impacts (both beneficial and adverse) on the local and cultural area, based on outcomes of community engagement processes and the social baseline study. Furthermore:

- describe and summarise outcomes of community engagement processes including the likely response of the affected communities, including Indigenous people
- address direct, indirect and secondary impacts from any existing projects and the proposed project including an assessment of the size, significance, and likelihood of these impacts at the local and regional level. Consider the following:
 - local, regional and state labour markets during the construction and operational phases, with regard to the source of the workforce. Present this information according to occupational workforce groupings. Detail whether the proponent and/or contractors are likely to employ locally or through other means and

whether there are initiatives for local employment business opportunities and how these workforce strategies relate and align to state and Commonwealth resource workforce planning, skill development and training strategies and policies

- proposed new skills and training related to the project including the occupational skill groups required and potential skill shortages anticipated
- impacts of construction and operational workforces, their families, and associated contractors on housing and accommodation availability and affordability.

Undertake an assessment of the impact of the passengers from the cruise ships on the social infrastructure in Cairns including civic facilities, services and networks. The anticipated activities and duration of the stay should be taken into account to determine downstream impacts on infrastructure.

Undertake an assessment of the impact of the dredging proposal on recreational and commercial fishing activities and the traditional owner values related to traditional fishing and hunting.

6.3. Impact mitigation measures and management strategies

For identified social impacts, social impact mitigation strategies and measures should be presented to address the recruitment and training of the construction and operational workforces and the social and cultural implications this may have for the host community, including if any part of the workforce is sourced from outside the social and cultural area.

Describe any consultation about acceptance of proposed mitigation strategies, and how practical management and monitoring regimes would be implemented.

7. Economies and management of impacts

7.1. Description of affected local and regional economies

Describe the existing economy in which the project is located and the economies materially impacted by the project. Include:

- a map illustrating the local and regional economies (local government areas—LGAs) that could be potentially affected by the project
- gross regional product or other appropriate measure of annual economic production
- demographic and employment profile of the study area as a whole and disaggregated by LGA. Include:
 - existing population (size, age, distribution)
 - existing community profiles of the LGAs directly affected by the project (household type, size, average income)
 - existing employment statistics (part-time/full-time, by occupation)
 - the regional economy's key industries and their contribution to regional economic income
- sufficient baseline economic data to underpin a comprehensive assessment of the direct, indirect, cumulative, costs and impacts of the project

- the key regional markets relevant to the project:
 - labour market
 - education and training markets
 - housing and land markets
 - construction services and building inputs market
 - regional competitive advantage and expected future growth
 - tourism markets.

7.2. Potential impacts and mitigation measures

The potential impacts should consider local, regional, state and national perspectives as appropriate to the scale of the project.

The analysis should describe both the potential and direct economic impacts including estimated costs, if material, on industry and the community, assessing the following:

- property values
- industry output
- employment
- the indirect impacts likely to flow to other industries and economies from developing the project, and the implications of the project for future development
- the distributional effects of the proposal including proposals to mitigate any negative impact on disadvantaged groups.

7.2.1. Strategies for local participation

The assessment of economic impacts should outline strategies to encourage participation by local industry and the local workforce, including:

- strategies for assessing the capacity and cost-effectiveness of sourcing goods and services from the regional and wider state economy during the pre-construction, construction, operation and rehabilitation phases of the project
- strategies for ensuring local suppliers of goods and services receive full, fair and reasonable opportunity to tender for work throughout the life of the project. Government-funded projects must prepare a Local Industry Participation Plan (LIPP) in accordance with the Queensland Local Industry Policy (Department of Employment, Economic Development and Innovation 2010) and its associated Guidelines. Private sector projects without government funding are recommended voluntarily to apply the Policy's principles, for example by preparing a LIPP and working with the Queensland Office of the Industry Capability Network (www.icnqld.org.au) to promote tender opportunities and identify capable local suppliers. Assistance with developing LIPPs and delivery strategies is available from the Industry Development unit of the Department of State Development, Infrastructure and Planning
- employment strategies for local residents including members of Indigenous communities and people with a disability, including a skills assessment and recruitment and training programs to be offered

- strategies adopting relevant government policy, relating to:
 - the level of training provided for construction contracts on Queensland Government building and construction contracts, with regard to the Queensland Government Building and Construction Contracts Structured Training Policy—the 10 per cent training policy (Skills Queensland 2008)
 - Indigenous employment opportunities—the Indigenous Employment Policy for Queensland Government: Building and Civil Construction Projects—the 20 per cent policy (Department of Employment, Economic Development and Innovation 2008a) could be adopted or its implementation measures used as a guide or tool for engaging Indigenous workers.

8. Hazard and risk

8.1. Hazard and risk assessment

Describe the potential hazards and risks to people and property that may be associated with the project, which may include but are not restricted to:

- identifying potential hazards, accidents, spillages, fire and abnormal events that may occur during all stages of the project, including possible risk of occurrence
- identifying all hazardous substances to be used, stored, processed or produced and the rate of usage. Include a description of the quantities and types of storage and handling systems and their location on a site plan
- refuelling infrastructure for fuel, chemicals and hazardous materials
- identification of the defined flood event level and the relationship between that level and the location of bulk hazardous materials storage facilities in accordance with State Planning Policy 1/03: Mitigating the Adverse Impacts of Flood, Bushfire and Landslide (Department of Local Government and Planning and Department of Emergency Services 2003)
- Identify the susceptibility of the project from flooding, potential impacts of the project on flooding to adjacent properties and the impact of the project on existing flood characteristics. The EIS should consider the specific outcomes of flood hazard management in State Planning Policy 1/03: Mitigating the Adverse Impacts of Flood, Bushfire and Landslide (Department of Local Government and Planning and Department of Emergency Services 2003).
- potential wildlife hazards, natural events (for example, cyclone, storm surge, flooding, bushfire) and implications related to climate change.

Undertake a preliminary risk assessment for all components of the project, as part of the EIS process in accordance with *Australia/New Zealand AS/NZS ISO 31000:2009 Risk management—Principles and guidelines* (Standards Australia/Standards New Zealand 2009) and *Managing environment-related risk* (HB203:2012) (Standards Australia 2012). Where relevant, refer to the *Queensland Coastal Plan Coastal Hazards Guideline* (Department of Environment and Heritage Protection 2012c) risk assessment factors. With respect to risk assessment, the EIS must:

- deal comprehensively with external and on-site risks including transport risks

- assess risks during the pre-construction, construction, operational and decommissioning phases of the project
- include an analysis of the consequences of each hazard on safety in the project area, examining the likelihood of both individual and collective consequences, involving injuries and fatalities to workers and to the public
- present quantitative levels of risks from the above analysis.

Provide details on the safeguards that would reduce the likelihood and severity of hazards, consequences and risks to persons, within and adjacent to the project area(s).

Present a comparison of assessed and mitigated risks with acceptable risk criteria for land uses in and adjacent to the project area(s).

Identify the residual risk following application of mitigation measures. Present an assessment of the overall acceptability of the impacts of the project in light of the residual uncertainties and risk profile.

Describe the mitigation strategies for flood hazard.

8.2. Cumulative risk

The risk analysis is to address the potential impacts that may occur on the normal on-site day-to-day activities during the construction and/or operation of the facilities. Furthermore, determine the level of change that may result on the risk contours of other relevant existing or proposed facilities in the area as a result of the proposed project (where details of such proposed facilities are provided to the proponent by the Office of the Coordinator-General or otherwise published). Individual risk criteria should be used to limit risks to individual workers and members of the public. Societal risk criteria should be used to limit risk to the affected population as a whole.

Identify and adopt, where appropriate, any changes to operating procedures that would reduce the possibility of these events occurring, or reduce the severity of the events should they occur. Present draft risk management plans for the construction and operational phases of the project.

8.3. Health and safety

8.3.1. Description of public health and safety community values

Describe the existing health and safety values of the community, workforce, suppliers and other stakeholders in terms of the environmental factors that can affect human health, public safety and quality of life, such as air pollutants, odour, lighting and amenity, dust, noise and water.

8.3.2. Potential impact and mitigation measures

Define and describe the objectives and practical measures for protecting or enhancing health and safety community values. Describe how nominated quantitative standards and indicators may be achieved for social impact management, and how the achievement of the objectives will be monitored, audited and managed.

Assess the cumulative effects on public health values and occupational health and safety impacts on the community, workforce and regional health services from project operations and emissions including tourist visitors from cruise ships. Recommend any practical monitoring regimes in this section.

Include relevant consultation with the appropriate regional health service providers.

8.4. Emergency management plan

The development of emergency and evacuation planning and response procedures is to be determined in consultation with state and regional emergency service providers.

Provide an outline of the proposed integrated emergency management planning procedures (including evacuation plans) for the range of situations identified in the risk assessment developed in this section. The plans are to provide for fire fighting infrastructure for the life of the project and take into account refuelling infrastructure. This includes strategies to deal with natural disasters during operation and construction including identification of key stakeholders.

Present preliminary information on the design and operation of proposed safety/contingency systems to address significant emergency issues delineated in the risk assessment, together with at least the following areas of emergency:

- marine collision minimisation
- fire prevention/protection
- leak detection/minimisation
- release of contaminants
- emergency shutdown systems and procedures
- natural disasters.

If the proposed design and operation systems required are outside the scope of relevant standards or codes, a fire study is to be undertaken to ensure adequate levels of protection are in place.

In addition, undertake an assessment of businesses that may be affected in the event of an emergency, including strategies to mitigate the impact on these businesses.

In regard to fires, outline strategies to manage the provision of:

- fire management systems to ensure the retention on site of fire water or other fire suppressants used to combat emergency incidents
- building fire safety measures for any construction or permanent accommodation
- details of any emergency response plans and bushfire mitigation plans under the State Planning Policy 1/03: Mitigating the Adverse Impacts of Flood, Bushfire and Landslide (Department of Local Government and Planning & Department of Emergency Services 2003)
- on-site firefighting equipment provided and the level of training of staff who will be tasked with emergency management activities
- detailed maps showing the plant outline, potential hazardous material stores, incident control points, firefighting equipment and the like.

- an outline of any dangerous goods stores associated with the plant operations, including fuel storage and emergency response plans.

Present outlines of emergency planning and response strategies to deal with relevant incidents above, which have been determined in consultation with state and regional emergency service providers, and which show integration of emergency services into the plans.

Present plans for emergency medical response and transport and first aid matters with involvement of the relevant state agencies (such as the Queensland Ambulance Service, Queensland Fire and Rescue Service and Emergency Management Queensland).

9. Cumulative impacts

Summarise the project's cumulative impacts and describe these impacts in combination with those of existing or proposed project(s) publicly known or advised by the office of the Coordinator-General to be in the region, to the greatest extent practicable. Assess cumulative impacts with respect to both geographic location and environmental values. In particular, address cumulative impacts in sensitive environmental areas identified in Section 5.4.1 of this TOR (refer to page 26).

Explain the methodology used to determine the cumulative impacts of the project, detailing the range of variables considered (including relevant baseline or other criteria upon which the cumulative aspects of the project have been assessed, where applicable).

10. Sustainable development

Provide a comparative analysis of how the project conforms to the objectives for 'sustainable development'—see the *National Strategy for Ecologically Sustainable Development* (Commonwealth of Australia 1992).

Consider the cumulative impacts (both beneficial and adverse) of the project from a life-of-project perspective, taking into consideration the scale, intensity, duration and frequency of the impacts to demonstrate a balance between environmental integrity, social development and economic development.

This information is required to demonstrate that sustainable development aspects have been considered and incorporated during the scoping and planning of the project.

11. Environmental management plan

Detail the EMPs for the construction and operational phases of the project. The EMP should be developed from, and be consistent with, the information in the EIS. The EMP must meet the requirements of section 203 of the EP Act, address discrete project elements and provide life-of-proposal control strategies. It must be capable of being read as a stand-alone document without reference to parts of the EIS.

The EMP must comprise the following components for performance criteria and implementation strategies:

- the proponent's commitments to acceptable levels of environmental performance, including environmental objectives, performance standards and associated measurable indicators, performance monitoring and reporting
- impact prevention or mitigation actions to implement the commitments
- corrective actions to rectify any deviation from performance standards
- an action program to ensure the environmental protection commitments are achieved and implemented. This will include strategies in relation to:
 - continuous improvement
 - environmental auditing
 - monitoring
 - reporting
 - staff training
 - where relevant, a rehabilitation program for land proposed to be disturbed under each relevant aspect of the proposal.

The recommended structure of each element of the EMP is shown below.

Element/issue	Aspect of construction or operation to be managed (as it affects environmental values).
Operational policy	The operational policy or management objective that applies to the element.
Performance criteria	Measurable performance criteria (outcomes) for each element of the operation.
Implementation strategy	The strategies, tasks or action program (to nominated operational design standards) that would be implemented to achieve the performance criteria and also include the implementation agency for each element of the EMP.
Monitoring	The monitoring requirements to measure actual performance (for example, specified limits to pre-selected indicators of change).
Auditing	The auditing requirements to demonstrate implementation of agreed construction and operation environmental management strategies and compliance with agreed performance criteria.
Reporting	Format, timing and responsibility for reporting and auditing of monitoring results.
Corrective action	The action (options) to be implemented in case a performance requirement is not reached and the person(s) responsible for action (including staff authority and responsibility management structure).

The proponent's commitments to environmental performance, as described in the EMP, may be included in the Coordinator-General's evaluation report as conditions, to ensure the commitments are met. Therefore, the EMP is a relevant document for project approvals, environmental authorities and permits, and may be referenced by them.

12. Conclusions and recommendations

Make conclusions and recommendations with respect to the project, based on the studies presented, the EMP and conformity of the project with legislative and policy requirements.

13. References

All references consulted should be presented in the EIS in a recognised format.

14. Appendices

Provide the following as appendices to the EIS:

- final TOR for this EIS
- TOR cross-reference table, which links the requirements of each section/subsection of the TOR with the corresponding section/subsection of the EIS, where those requirements have been addressed
- a list of the project approvals required by the project.
- the consultation report, as described in Section 3.7, (page 7).
- a list of the relevant qualifications and experience of the key study team members and specialist sub-consultants
- a glossary of technical terms
- a list of abbreviations
- any reports of specialist studies undertaken as part of the EIS
- a copy of the proponent's corporate environmental policy and planning framework document.
- a list of all commitments made by the proponent in the EIS, with cross-references to the relevant section in the EIS
- a copy of the proponent's land acquisition protocols.

Acronyms and abbreviations

Acronym/abbreviation	Definition
ACH Act	<i>Aboriginal Cultural Heritage Act 2003</i> (Qld)
AS/NZS	Australian standard/New Zealand standard
CAMBA	China–Australia Migratory Bird Agreement
CHMP	cultural heritage management plan
Coastal Act	<i>Coastal Protection and Management Act 1995</i> (Qld)
DAFF	The Department of Agriculture, Fisheries and Forestry, Queensland
DEHP	Department of Environment and Heritage Protection, Queensland
DNPRSR	Department of National Parks, Recreation, Sport and Racing
DNRM	Department of Natural Resources and Mines
EIS	environmental impact statement
EMP	environmental management plan
EP Act	<i>Environmental Protection Act 1994</i> (Qld)
EPBC Act	<i>Environment Protection and Biodiversity Conservation Act 1999</i> (Cwlth)
EPP	environmental protection policy (water, air, waste, noise)
ERA	environmentally relevant activity
GBRWHA	Great Barrier Reef World Heritage Area
JAMBA	Japan–Australia Migratory Bird Agreement
MNES	matters of national environmental significance (under the EPBC Act)
NC Act	<i>Nature Conservation Act 1992</i> (Qld)
NGA	National Greenhouse Accounts
NT agreement	native title agreement
QASSIT	Queensland Acid Sulfate Soils Investigation Team
RE	regional ecosystem (for a definition, refer to the Glossary)
REDD	Regional Ecosystem Description Database
ROKAMBA	Republic of Korea–Australia Migratory Bird Agreement
SCL Act	<i>Strategic Cropping Land Act 2011</i> (Qld)
SDPWO Act	<i>State Development and Public Works Organisation Act 1971</i> (Qld)
SIA	social impact assessment
SPA	<i>Sustainable Planning Act 2009</i> (Qld)
The proponent	Far North Queensland Ports Corporation (trading as Ports North)
TIA	<i>Transport Infrastructure Act 1994</i> (Qld)
TOR	terms of reference
TORUM Act	<i>Transport Operations (Road Use Management) Act 1995</i> (Qld)
VM Act	<i>Vegetation Management Act 1999</i> (Qld)
WSSR Act	<i>Water Supply (Safety and Reliability) Act 2008</i> (Qld)

Glossary

Term	Definition
aquifer	A water bearing stratum of permeable rock, sand, or gravel, able to transmit substantial quantities of water.
assessable vegetation	Vegetation in which clearing is assessable development under Schedule 3, Part 1, Table 4, Item 1 of SPA.
biodiversity	Biodiversity is short for 'biological diversity'. It describes the natural diversity of native wildlife, together with the environmental conditions necessary for their survival and includes: <ol style="list-style-type: none"> a) regional diversity, that is, the diversity of the landscape components of a region, and the functional relationships that affect environmental conditions within ecosystems b) ecosystem diversity, that is, the diversity of the different types of communities formed by living organisms and the relations between them c) species diversity, that is, the diversity of species d) genetic diversity, that is, the diversity of genes within each species.
bunding	An artificial created boundary, usually in the form of an embankment used to prevent sediment and substances from entering a water stream or storage facility.
community	An assemblage of interdependent populations of different species (plants and animals) interacting with one another, and living in a particular area.
controlled action	A proposed action that is likely to have a significant impact on a matter of national environmental significance; the environment of Commonwealth land (even if taken outside Commonwealth land); or the environment anywhere in the world (if the action is undertaken by the Commonwealth). Controlled actions must be approved under the controlling provisions of the EPBC Act.
controlling provision	The matters of national environmental significance, under the EPBC Act, that the proposed action may have a significant impact on.
Coordinator-General	The corporation sole constituted under section 8A of the <i>State Development and Public Works Organisation Act 1938</i> and preserved, continued in existence and constituted under section 8 of the SDPWO Act.
CORVEG	Queensland Herbarium's site based floristic dataset containing field survey data
ecosystem	A biophysical environment containing a community of organisms.
effluent	Outflow of treated wastewater.
ephemeral	Transitory, short-lived.

endangered	<p>A species is endangered if:</p> <ul style="list-style-type: none"> • there have not been thorough searches conducted for the wildlife and the wildlife has not been seen in the wild over a period that is appropriate for the life cycle or form of the wildlife, or • the habitat or distribution of the wildlife has been reduced to an extent that the wildlife may be in danger of extinction, or • the population size of the wildlife has declined, or is likely to decline, to an extent that the wildlife may be in danger of extinction, or • the survival of the wildlife in the wild is unlikely if a threatening process continues.
endemism	The ecological state of being unique to a defined geographic location, such as an island, nation or other defined zone, or habitat type.
erosion	The process by which rocks are loosened, worn away and removed from parts of the earth's surface.
fluvial	Of, relating to, or inhabiting a river or stream.
geomorphological	The form or shape of the landscape and the processes that modify or change it.
groundwater	Water found underground in porous rock or soil strata.
habitat	The biophysical medium or media occupied (continuously, periodically or occasionally) by an organism or group of organisms.
Habitat corridor	A strip of habitat that facilitates fauna movement between otherwise isolated patches of habitat.
lacustrine environments	<p>A lake or lake-like environment. Wetlands and deepwater habitats with all of the following characteristics:</p> <p>(1) situated in a topographic depression or dammed river channel; (2) lacking trees, shrubs, persistent emergent plants, mosses, or lichens with greater than 30% areal coverage; and (3) total area exceeds 8 ha (20 acres).</p>
listed species	A plant or animal included in a schedule of vulnerable, rare or endangered biota, such as the schedules in the EPBC Act or the Nature Conservation (Wildlife) Regulation 2004 (Qld).
mitigation	The effort to eliminate or reduce impacts.
morphology	Form and structure of organisms without consideration of function.
native species	A species that is indigenous to Australia or an external territory, or periodically or occasionally visits.
native wildlife	Any taxon or species of wildlife indigenous to Australia.
natural environment	The complex of atmospheric, geological, and biological characteristics found in an area in the absence of artefacts or influences of a well-developed technological human culture.
palaeontologic	The study of fossils to determine the structure and evolution of extinct animals and plants.
permeability	The capacity of a material (rock) to transmit fluids (groundwater).
porosity	That fraction of total rock volume which is filled with water, gas, or oil.
proponent	The entity or person who proposes a significant project. It includes a person who, under an agreement or other arrangement with the person who is the existing proponent of the project, later proposes the project.

regional ecosystems (REs)	Regional ecosystems were defined by Sattler and Williams (1999) as vegetation communities in a bioregion that are consistently associated with a particular combination of geology, landform and soil.
regrowth	A young, usually even-aged forest stand that has regenerated after disturbance.
rehabilitation	Making the land useful again after a disturbance. It involves the recovery of ecosystem functions and processes in a degraded habitat.
remnant vegetation	Small remaining areas of naturally occurring vegetation in a landscape that has been altered by human activity such as agriculture. These remnants were once part of a continuously vegetated landscape.
riparian	Pertaining to, or situated on the bank of, a body of water, especially a watercourse such as a river.
riparian zone	Located alongside a watercourse.
run-off	The amount of rainfall which actually ends up as stream flow, also known as rainfall excess.
sediment	Any usually finely divided organic and/or mineral matter deposited by air or water in non-turbulent areas.
sensitive receptor	Those locations or areas where dwelling units or other fixed, developed sites of frequent human use occur.
significant project	A project declared as a 'significant project' by the Coordinator-General, under section 26 of the SDPWO Act.
sodic soil	A sodic soil is defined as one in which more than 10–15 per cent of the clay's negative charge is balanced by sodium ions.
stratigraphy	Rock strata, especially the distribution, deposition, and age of sedimentary rocks.
terrestrial	Pertaining to land, the continents, and/or dry ground. Contrasts to aquatic.
under stress	Aquifer water level conditions as defined by DEHP
visual absorption capacity	The landscape's ability to absorb physical changes without transformation in its visual character and quality. The intrinsic capacity of a landscape unit to dissimulate the industrial structures of a specific project without compromising its unique character.
water asset	Water, or the rights or other claims to water, which the water report entity either holds, or for which the water report entity has management responsibilities, and from which an individual or organisation that is a water report entity, or a group of stakeholders of a physical water report entity, derives future benefits (as defined in Exposure Draft of Australian Water Accounting Standard 1 (2010)—Water Accounting Standards Board)

TOR SECTION No.	TOR SECTION	TOR	CHAPTER
1	Executive Summary	The executive summary should convey the most important and preferred aspects and options relating to the project in a concise and readable form. It should use plain English, avoid jargon, be written as a stand-alone document and be structured to follow the EIS. It should be easy to reproduce and distribute on request to those who may not wish to read or purchase the whole EIS.	Executive Summary
1	Executive Summary	The executive summary should include: <ul style="list-style-type: none"> · project title 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · proponent's name and contact details 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · a discussion of any relevant projects previously undertaken by the proponent, if applicable, and the proponent's commitment to effective environmental management 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · a concise statement of the aims and objectives of the project 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · the legal framework for the project, decision-making authorities and advisory agencies 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · an outline of the background and need for the project, including the consequences of not proceeding with the project 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · an outline of the alternative options considered and reasons for selecting the proposed development option 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · a brief description of the project (pre-construction, construction, operational activities and decommissioning) and the existing environment, using visual aids where appropriate 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · an outline of the principal environmental impacts predicted and the proposed environmental management strategies, commitments and rehabilitation strategies to minimise the significance of these impacts 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · a discussion of the cumulative impacts in relation to social, economic and environmental factors of associated infrastructure projects proposed within the region 	Executive Summary
1	Executive Summary	<ul style="list-style-type: none"> · detailed maps of the proposed project location and any other critical figures. 	Executive Summary
2	Glossary of Terms	Provide a glossary of technical terms, acronyms, abbreviations and references.	Provided at the beginning of the EIS
3	Introduction	Clearly explain the function of the EIS, why it has been prepared and what it sets out to achieve. Include an overview of the structure of the document.	Part A1 Project Introduction A1.1, A1.6, A1.12
3.1	Project Proponent	Describe the proponent's experience, including: <ul style="list-style-type: none"> · the nature and extent of business activities 	Part A1 Project Introduction A1.3; Appendix D10
3.1	Project Proponent	<ul style="list-style-type: none"> · experience and qualifications 	Part A1 Project Introduction A1.3
3.1	Project Proponent	<ul style="list-style-type: none"> · environmental record, including a list of any breach of relevant environmental laws during the previous ten years 	Part A1 Project Introduction A1.3
3.1	Project Proponent	<ul style="list-style-type: none"> · the proponent's environmental, health, safety and community policies. 	Part A1 Project Introduction A1.3
3.2	Project Description	Briefly describe the key elements of the project with illustrations or maps. Summarise any major associated infrastructure requirements. Provide detailed project descriptions in the relevant sections.	Part A1 Project Introduction A1.1, A1.7; A4 Project Description
3.3	Project Rationale	Describe the specific objectives and justification for the project, including its strategic, economic, environmental and social implications, technical feasibility and commercial drivers. Discuss the status of the project in a regional, state and national context. Explain the project's compatibility with relevant policy, planning and regulatory frameworks.	Parts A1 Project Introduction A1.2; B1 Land B1.2; Appendix C C. Legislation and Approvals C.1.6

3.4	Relationship to other projects	Describe how the project relates to other major projects (of which the proponent should reasonably be aware) that have been or are being undertaken, or that have been proposed or approved in the area potentially affected by the project. As a result of this assessment, there may be opportunities to co-locate existing or proposed infrastructure, enabling efficiency gains and mitigating environmental and property impacts. Where co-location may be likely, outline opportunities to coordinate or enhance impact mitigation strategies. Discuss the opportunities in sufficient detail to enable the reader to understand the reasons for preferring certain options or courses of action.	Part A1 Project Introduction A1.2 ; A3 Appropriateness Assessment
3.5	Project Alternatives	Describe feasible alternatives including conceptual, technological and locality alternatives to the proposed project and the consequences of not proceeding with the project (including any impacts that would be avoided). Detail the criteria used to determine the alternatives and provide sufficient detail to convey why certain options or courses of action are preferred and why others are rejected (including the 'no action' option). Discuss the interdependencies of project components, particularly in regard to how any infrastructure requirements relate to the viability of the project. This information is required to assess why the scope of the project is as it is and to ensure that the environmentally sustainable design principles and sustainable development aspects were considered and incorporated during the project's scoping phase.	Part A1 Project Introduction A1.9
3.6	The environmental impact assessment process		NA
3.6.1	Methodology of the EIS	Provide an outline of the environmental impact assessment process, including the role of the EIS in the Coordinator-General's decision making process. Include information on relevant stages of EIS development, statutory and public consultation requirements and any interdependencies that exist between approvals sought. The information in this section is required to ensure:	Part A1 Project Introduction, A1.11
3.6.1	Methodology of the EIS	· relevant legislation is addressed	Part A1 Project Introduction, A1.11
3.6.1	Methodology of the EIS	· readers are informed of the process to be followed	Part A1 Project Introduction, A1.11
3.6.1	Methodology of the EIS	· stakeholders are aware of any opportunities for input and participation.	Part A1 Project Introduction A1.1.4, A1.14
3.6.2	Objectives of the EIS	Provide a statement of the objectives of the environmental impact assessment process. The structure of the EIS can then be outlined and used to explain how the EIS will meet its objectives. The purpose of the EIS is to:	Part A1 Project Introduction A1.6, A1.12.2
3.6.2	Objectives of the EIS	· provide public information on the need for the project, alternatives to it, assess options and make informed decisions for its implementation	Part A1 Project Introduction A1.6, A1.12.2
3.6.2	Objectives of the EIS	· present the likely effects of the project on the natural, social and economic environment	Part A1 Project Introduction A1.6, A1.12.2
3.6.2	Objectives of the EIS	· demonstrate how environmental impacts can be avoided, managed or mitigated and the offsets for any residual impacts	Part A1 Project Introduction A1.6, A1.12.2
3.6.2	Objectives of the EIS	· provide information to formulate the project's environmental management plan (EMP).	Part A1 Project Introduction A1.6, A1.12.2
3.6.3	Submissions	Inform the reader how and when properly made public submissions on the EIS will be addressed and taken into account in the decision-making process. Indicate points in subsequent approval processes for the project (for example, 'material change of use' (MCU) applications under the Sustainable Planning Act 2009 (SPA) where submitters may have appeal rights. The EIS project manager can assist with preparing information on the submissions process.	Part A1 Project Introduction A1.14

3.7	Public consultation process			NA	
3.7.1	Overview		The public consultation process should provide opportunities for community involvement and education. It may include interviews with individuals, public communication activities, interest group meetings, printed material and other mechanisms to encourage and facilitate active public consultation. The public consultation processes (community engagement) for all parts of the EIS should be integrated. Consultation with advisory agencies should be the principal forum for identifying legislation, regulations, policies and guidelines relevant to the project and EIS process.	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		Develop and implement a comprehensive and inclusive consultation plan with the stakeholder groups identified in section 3.2 of <i>Preparing an EIS: Guideline for proponents</i> . The consultation plan should identify broad issues of concern to local and regional community and interest groups and address issues from project planning through commencement, project operations and decommissioning. The consultation plan should identify:	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· the stakeholders to be targeted	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· the types of consultation and communication activities to be undertaken	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· timing of activities	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· how consultation activities will be integrated with other EIS activities and the project development process	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· consultation responsibilities	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· communication protocols	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· reporting and feedback arrangements	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.2	Consultation plan		· how results of consultation will be considered by the proponent and integrated into the EIS process.	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.3	Public consultation report		include, as an appendix, a public consultation report detailing how the public consultation plan was implemented, and the results. It must include:	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.3	Public consultation report		· a list of stakeholders identified, including the Australian and Queensland governments, local government agencies, and/or the affected parties (as defined by the Environmental Protection Act 1994 (EP Act))	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.3	Public consultation report		· criteria for identifying stakeholders and methods used to communicate with them	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	
3.7.3	Public consultation report		· details of the activities conducted to date and the future consultation strategies and programs, including those during the operational phase of the project (also outlined and included in the EMP)	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report	

3.7.3	Public consultation report	<ul style="list-style-type: none"> a summary of the issues raised by stakeholders and the means by which the issues have been addressed 	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report
3.7.3	Public consultation report	<ul style="list-style-type: none"> details of how consultation involvement and outcomes were integrated into the EIS process 	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report
3.7.3	Public consultation report	<ul style="list-style-type: none"> details of how consultation outcomes will be integrated into future site activities (including opportunities for engagement and provision for feedback and action if necessary). 	Part A1 Project Introduction A11.4; Appendix B Stakeholder and Community Engagement Report
3.8	Project approvals		NA
3.8.1	Legislation and approvals	List and describe Australian, state and local legislation, approvals and plans relevant to the planning, approval, construction and operation of the project.	Part A1 Project Introduction A1.11; Appendix C Legislation and Approvals
3.8.1	Legislation and approvals	Commonwealth legislation Relevant Commonwealth legislation may include, but is not limited to:	Part A1 Project Introduction A1.11; Appendix C Legislation and Approvals
3.8.1	Legislation and approvals	<ul style="list-style-type: none"> EPBC Act 	Part A1 Project Introduction A1.11; Appendix C Legislation and Approvals

3.8.1	Legislation and approvals	<ul style="list-style-type: none"> development approval for a material change of use of a premises for an environmentally relevant activity (ERA) and associated registration certificate: <ul style="list-style-type: none"> ERA16: Extractive and screening activities (dredging)—EP Act 	Part A1 Project Introduction A1.11; Appendix C Legislation and Approvals

3.8.1	Legislation and approvals	Identify the relevant approval agency for each of the approvals required.	Part A1 Project Introduction A1.11; Appendix C Legislation and Approvals
3.8.2	Relevant plans	Outline the project's consistency with the existing national, state, regional and local planning framework that applies to the project location. Refer to all relevant statutory and non-statutory plans, planning policies, guidelines, strategies and agreements. The key plans and policies are listed under the relevant sections of this TOR. These include but are not limited to the following:	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Far North Queensland Regional Plan 2009–31 (Department of Infrastructure and Planning 2009)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Cairns Plan	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Cairns Port Authority Land Use Plan (LUP), under the TI Act	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· environmental protection policies (EPPs, subordinate to the EP Act), including: – EPP (Noise) 2008 – EPP (Air) 2008 – EPP (Water) 2009 – EPP (Waste Management) 2000	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· State planning policies and their supporting guideline, including: – State Planning Policy 2/02: Planning and Managing Development Involving Acid Sulfate Soils (Department of Natural Resources and Mines & Development of Local Government and Planning 2002a) – State Planning Policy 1/03: Mitigating the Adverse Impacts of Flood, Bushfire and Landslide (Department of Local Government and Planning and Department of Emergency Services 2003) – State Planning Policy 4/11: Protecting Wetlands of High Ecological Significance in Great Barrier Reef Catchments (Department of Environment and Resource Management 2011c) – Temporary State Planning Policy 2/12: Planning for Prosperity (Department of State Development, Infrastructure and planning)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Queensland Coastal Plan State Planning Policy: Coastal Management (Department of Environment and Resource Management 2011f), and Draft Coastal Protection State Planning Regulatory Provision (Department of State Development, Infrastructure and Planning 2012)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· fish habitat policies, administered by the Department of Agriculture, Fisheries and Forestry (DAFF)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Queensland Biosecurity Strategy 2009–14 (Department of Primary Industries and Fisheries 2008)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Queensland Skills Plan 2008 (Department of Education, Training and the Arts 2008)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Queensland Local Industry Policy (Department of Employment, Economic Development and Innovation 2010)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Queensland Biodiversity Offset Policy (version 1) (Department of Environment and Resource Management 2011b)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· State Planning Policy 4/11: Protecting Wetlands of High Ecological Significance in Great Barrier Reef Catchments (Department of Environment and Resource Management 2011c). With specific relevance to maritime safety and operations, the following policies, guidelines and standards should be referenced:	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· Maritime Safety Queensland Regulation 2002	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans	· <i>Maritime Transport and Offshore Facilities Security Act 2003</i>	Appendix C Legislation and Approvals; and relevant technical chapters

3.8.2	Relevant plans		· <i>Transport Operations (Marine Pollution) Act 1995</i>	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans		· <i>Transport Operations (Marine Safety) Act 1994</i>	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans		· <i>Transport Operations (Maritime Safety) Regulation 2004</i>	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans		· Australian Maritime Safety Authority marine orders	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans		· Queensland Coastal Contingency Action Plan (QCCAP)	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans		· Standards for Hydrographic Surveys within Queensland Waters	Appendix C Legislation and Approvals; and relevant technical chapters
3.8.2	Relevant plans		· <i>Transport Operations (Marine Pollution) Regulation 2008.</i>	Appendix C Legislation and Approvals; and relevant technical chapters
38.3	Environmentally relevant activities		Briefly describe each environmentally relevant activity (ERA) under the EP Act and associated activities that are to be carried out in connection with the project. Present a detailed description of each ERA in Section 5, Environmental values and management of impacts. Provide details of the impact on land, water, air, noise and any other identified environmental values, as well as a detailed description of the waste generated from each ERA and its quantity, characteristics, handling, storage, management and intended treatment and disposal.	Appendix C Legislation and Approvals; and relevant technical chapters
4.1	Overview of Project		Provide an overview of the project to put it into context. Include:	A1, Introduction
4.1	Overview of Project		· a rationale explaining the selection of the preferred operating scenario, including details such as cost, environmental impacts, and the development operational efficiencies of each option	Parts A4 Project Description A4.4 , A4.7, A4.18; A2, Dredge Material Placement Options Assessment and A3, Appropriateness
4.1	Overview of Project		· a description of the key components of the project including the use of text and design plans where applicable	Part A4 Project Description, 4.4 Project Infrastructure
4.1	Overview of Project		· a summary of any environmental design features of the project	Part A4 Project Description, 4.4 Project Infrastructure
4.1	Overview of Project		· the expected cost, timing, and overall duration of the project, including details of and justification for, any staging of the development	Part A4, Project Description A4.13, A4.18 ; Part A1 Project Introduction A1.7; Part B9, Socio-economic
4.1.1	Shipping Entrance Channel Dredging		Describe, map and illustrate the location, area, depth and volume of dredging required for the project, including currently dredged and approved areas for dredging in relation to the proposed dredging	Part A4 Project Description A4.4
4.1.1	Shipping Entrance Channel Dredging		Explain the provisions of any previous sea dumping permits for port operations relevant to the project including dates, volumes and existing spoil ground location, capacity and environmental values	Part A4 Project Description, A4.2
4.1.1	Shipping Entrance Channel Dredging		Provide details of the dredging methods including:	Part A4 Project Description A4.7;
4.1.1	Shipping Entrance Channel Dredging		· the type and design of dredge vessel and equipment to be used, including number and type of vessels and reasons for the proposed selection of equipment including additional or reduced contribution to sediment plume generation according to vessel type being used as compared to alternative vessel types	Part A4 Project Description A4.7;
4.1.1	Shipping Entrance Channel Dredging		· the expected duration, timing and operation hours of dredging campaigns (including the reasons for any staging)	Part A4 Project Description A4.7;
4.1.1	Shipping Entrance Channel Dredging		· expected dredge and support vessel movement paths and frequency	Parts A4 Project Description A4.7; C2 Dredge Management Plan; C3 Vessel Transport Management Plan
4.1.1	Shipping Entrance Channel Dredging		· measures to be used to minimise risk of introducing exotic species on dredging equipment	Part A4 Project Description A4.7; Part B7 Marine Ecology & C2, Dredge Management Plan
4.1.1	Shipping Entrance Channel Dredging		· whether, where and how any blasting may be required, including scale, frequency and duration of the blasting, and proposed management measures	No blasting proposed.

4.1.1	Shipping Entrance Channel Dredging	<ul style="list-style-type: none"> operational management of dredging and dredge spoil handling, particularly in relation to sediment plume generation according to vessel type being used, impacts on water quality and marine mega fauna (including turtles, dolphins, sharks and dugongs) 	Part A4 Project Description A4.7; B7 Marine Ecology & C2, Dredge Management Plan
4.1.2	Dredge spoil disposal	Describe proposed disposal options for both capital and maintenance dredge spoil including: <ul style="list-style-type: none"> disposal site locations, characteristics, dimensions and capacity (including initial and final bathymetry for unconfined sea disposal sites) stability of the disposal site options (retentive or dispersive, considering wave and current erosion) and any requirement for containment) disposal methods including provision for different dredging equipment, material characteristics, contaminants or acid sulphate soils where relevant Where sea disposal is considered, describe the selection of the preferred spoil disposal site based on: <ul style="list-style-type: none"> relevant agreements, guidelines, policies 	Part A2, Dredge Material Placement Options Assessment Part A4 Project Description A4.7; B5 Marine Water Quality; A2, Dredge Material Placement Options Assessment Parts A2, Dredge Material Placement Options Assessment ; B3 Coastal Processes B3.3, B3.4, B3.5 Part A4 Project Description A4.7; B4 (Sediment Quality) Part A2, Dredge Material Placement Options Assessment; A4 Project Description A4.2
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> potential ecological impacts 	Part A4 Project Description A4.6, A4.7, A4.18; A2 Dredge Material Placement Options Assessment
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> characteristics of the spoil 	Part A4 Project Description A4.6, A4.7, A4.18; A2 Dredge Material Placement Options Assessment
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> dredging technology constraints 	Part A4 Project Description A4.6, A4.7, 4.18; A2 Dredge Material Placement Options Assessment A3 Appropriateness Assessment
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> economic benefits 	Part A4 Project Description A4.6, A4.7, 4.18; A2 Dredge Material Placement Options Assessment A3 Appropriateness Assessment
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> cost of alternatives 	Part A4 Project Description A4.6, A4.7, 4.18; A2 Dredge Material Placement Options Assessment A3 Appropriateness Assessment
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> lifespan of current maintenance dredge spoil disposal site, impacts on lifespan of current site and lifespan of proposed site 	Part A4 Project Description A4.6, A4.7, 4.18; A2 Dredge Material Placement Options Assessment A3 Appropriateness Assessment
4.1.2	Dredge spoil disposal	Provide descriptions of all feasible alternative land-based spoil disposal sites including: <ul style="list-style-type: none"> equipment and pipeline routes to be used 	Parts A2, Dredge Material Placement Options Assessment, A3, Appropriateness Assessment & Part D, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> location and nature of tail water discharge points 	A2, Dredge Material Placement Options Assessment & Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> details of estimated commencement, completion, rate of progress and existing levels and proposed final levels of the land e.g. for filling land or reclamation work 	Parts A2 Dredge Material Placement Options Assessment & Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> typical cross-section of the land e.g., for filling land or reclamation work 	Parts A2 Dredge Material Placement Options Assessment & Part D5, East Trinity REF

4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> where there is potential for impacts from sea erosion, method of protecting the seaward boundary of the land 	Parts A2, Dredge Material Placement Options Assessment & Part D5 and D6, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> construction details of any temporary or permanent treatment or dewatering structures including measures to contain or collect seepage waters 	Parts A2 Dredge Material Placement Options Assessment; Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> Provide the following information in relation to any proposed disposal of dredge spoil to reclaim land below the limit of highest astronomical tide (HAT): 	Parts A2 Dredge Material Placement Options Assessment; Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> the boundary of land to be filled or reclaimed by metres and bounds, tied to real property boundary/Commonwealth/State land boundaries 	Parts A2 Dredge Material Placement Options Assessment; Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> the location of the limit of mean high water spring tide, HAT and lowest astronomical tide 	Parts A2 Dredge Material Placement Options Assessment; Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> existing levels of the land and proposed final levels relative to the Australian height datum (AHD) 	Parts A2 Dredge Material Placement Options Assessment; Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> method of containment of the dredge spoil and protection from erosion with certification of design by a registered professional engineer of Queensland (REPOQ) 	Parts A2 Dredge Material Placement Options Assessment; Part D5, East Trinity REF
4.1.2	Dredge spoil disposal	Where breakwater and revetment walls or reclamation are proposed provide geotechnical and composition information on sediments that may be displaced, and the	Parts A2 Dredge Material Placement Options Assessment; Part D5 D6, East Trinity REF
4.1.2	Dredge spoil disposal	potential impact of sediment dispersion or displacement on water quality and marine ecosystems, including:	Parts B5 Marine Water Quality B5.4; B7 Marine Ecology B7.5; Part D, East Trinity REF D.6
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> bore logs at a frequency and depth, and with material characterisation sufficient to determine potential displacement of material land/or the need for excavation 	Parts B4 Marine Sediment Quality B4.2; Appendix D2 Sediment Quality Report
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> contaminant assessment of material potential displaced or excavated consistent with the NAGD 	Parts B4 Marine Sediment Quality B4.2; Appendix D2 Sediment Quality Report
4.1.2	Dredge spoil disposal	<ul style="list-style-type: none"> acid sulfate soil survey of material potentially displaced or excavated consistent with the Guidelines for Sampling and Analysis of Lowland Acid Sulfate Soils (ASS) in Queensland 1998 (Aherm et al. 1998) 	Parts B4 Marine Sediment Quality B4.2; Appendix D2 Sediment Quality Report; Part D East Trinity REF D6.6
4.2	Location	Describe, using maps at suitable scales, the regional and local context of the project and all associated infrastructure. Provide real property descriptions of the project. Maps should show the precise location of the project area, in particular the:	Part B2.3 Existing Nature Conservation Values
4.2	Location	<ul style="list-style-type: none"> location and boundaries of current or proposed land tenures that the project area is or will be subject to, and details of the ownership of that land 	Part B1 Land B1.3
4.2	Location	<ul style="list-style-type: none"> location, boundaries, and area and size of the project footprint, including easement widths and access requirements 	Part A4 Project Description A4.2 ; D East Trinity REF D4

4.3.2	Structures	Describe all structures, including:	Part A4 Project Description A4.4
4.3.2	Structures	<ul style="list-style-type: none"> locations and dimensions of buildings, refuelling and marine infrastructure associated with the port expansion 	Part A4 Project Description A4.4
4.3.3	Structures	<ul style="list-style-type: none"> location and extent of any proposed breakwater and revetment structures (if required) and the likely construction methodologies 	Not proposed
4.3.3	Structures	<ul style="list-style-type: none"> the design criteria and any modifications of structures that may be needed to accommodate climate change and sea level rise 	Part A4 Project Description, 4.4; B16 Climate Change and Greenhouse Gases B16.3; Part D5, East Trinity REF
4.3.3	Structures	Provide maps and figures detailing where permanent or temporary loss of tidal land is likely to occur as a result of building and structures	Part A4 Project Description 4.3, 4.4; D6, East Trinity REF; B3 Coastal Processes B3.4
4.3.3	Maritime operation	Describe the location and nature of processes and operations associated with the operation of the project, including:	Part A4, Project Description; C4, Maritime Operational Management Plan
4.3.3	Maritime operation	<ul style="list-style-type: none"> a general description of operations 	Part A4 Project Description, A4.4
4.3.3	Maritime operation	<ul style="list-style-type: none"> the current and expected increased shipping numbers, sizes, frequency, speed, route and piloting requirements through the Port of Cairns and GBRMP for current and future port operations 	Part A4 Project Description A4.15, B18 Cumulative Impact Assessment B18.3; Appendix D6 Cairns Cruise Shipping Development Plan – Demand Study, 2014; C4, Maritime Operations Management Plan
4.3.3	Maritime operation	<ul style="list-style-type: none"> hours of operation 	Part A4 Project Description A4.15 Operational Activities; Part C4 Maritime Operations Management Plan
4.3.3	Maritime operation	<ul style="list-style-type: none"> expected access, navigational and anchorage arrangements 	Maritime Operations Management Plan
4.3.3	Maritime operation	<ul style="list-style-type: none"> maintenance dredging operations, including frequency and reference to the planned spoil disposal locations 	C4 Maritime Operations Management Plan
4.3.3	Maritime operation	<ul style="list-style-type: none"> description of arrangements for maintenance of marine facilities, such as ship-sourced pollution management facilities including details of responsible parties 	Part A4 Project Description A4.16
4.3.3	Maritime operation	<ul style="list-style-type: none"> details of predicted usage of marine facilities, including opportunities for recreational and public usage 	Part A4 Project Description A4.15
4.3.3	Maritime operation	<ul style="list-style-type: none"> detailed requirements of vessel operations, including pilotage, channel closures, quarantine and security arrangements 	C4 Maritime Operations Management Plan
4.3.3	Maritime operation	Describe the impact of operations on offshore moorings during construction and operation of the proposal, the removal if any of the moorings and the nature of any	Part A4 Project Description A4.17; C4, Maritime Operations Management Plan
4.3.3	Maritime operation	impacts on existing recreational and commercial fishing boat owners	Part A4 Project Description A4.4
4.4	Construction phase	Provide a detailed staging plan and approximate timeframes for the project's construction activities	Part A4 Project Description A4.5, 4.7
4.4	Construction phase	Provide an estimate of the number and roles of persons to be employed during the construction phase of the project	Part A4 Project Description A4.5, 4.7
4.4	Construction phase	Provide the following information on the pre-construction, construction and commissioning of the project, including detailed plans, drawings and maps	Part A4 Project Description A4.5, 4.7

4.4	Construction phase	Describe all pre-construction activities, including nature, scale and timing of:	Part A4 Project Description Parts A4.4 to A4.14, & D5 (East Trinity REF)
4.4	Construction phase	· any land acquisitions required, be it in full or as easements, leases	No land acquisition required.
4.4	Construction phase	· any vegetation clearing including marine plants	Part B8 Terrestrial Ecology B8.7
4.4	Construction phase	· site access	Part A4 Project Description A4.10
4.4	Construction phase	· earthworks	Part A4 Project Description A4.9 and D5 (East Trinity REF)
4.4	Construction phase	· interference with watercourses and floodplain areas, including wetlands, salt marsh areas and mangroves and intertidal areas	Part B8 Terrestrial Ecology B8.7 and Part B2 Nature Conservation Areas B2.3
4.4	Construction phase	· site establishment requirements for construction facilities, including access measures, movement of materials and equipment, and expected size, source and control of any construction workforce accommodation, services (water, sewerage, communication, energy, waste disposal) and safety requirements	Part A4 Project Description Parts A4.4 to A4.14
4.4	Construction phase	· temporary works	Part A4 Project Description A4.4 to A4.15
4.4	Construction phase	· upgrade, relocation, realignment, deviation of or restricted access to roads and other infrastructure	Part A4 Project Description A4.4 to A4.16
4.4	Construction phase	· equipment to be used	Part A4 Project Description A4.4 to A4.17
4.4	Construction phase	· infrastructure for fuel, chemicals and hazardous materials	Part A4 Project Description A4.4 to A4.18
4.4.1	Program of works	Describe all the construction elements of the project, including:	Part A4 Project Description A4.7, A4.14
4.4.1	Program of works	· an indicative construction timetable, including expected commissioning and start-up dates and hours of construction	Part A4 Project Description A4.7, A4.15
4.4.1	Program of works	· major work programs for the construction phase, including an outline of construction methodologies	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.4.1	Program of works	· construction equipment to be used	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.4.1	Program of works	· construction inputs, handling and storage including an outline of potential locations for source of construction materials	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.4.1	Program of works	· major hazardous materials to be transported, stored and/or used on site, including environmental toxicity data and biodegradability	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.4.1	Program of works	· clean-up and restoration of areas used during construction and storage areas	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.4.2	Commissioning	Describe the commissioning process including any associated environmental impacts	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5 C2, Dredge Management Plan
4.5	Associated infrastructure	Detail, with the aid of concept and layout plans, requirements for new infrastructure or upgrading/relocating existing infrastructure to service the project. Consider infrastructure such as transportation (road/rail/air/ship), water supply and storage, energy supply, telecommunications, stormwater, waste disposal and sewerage	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.5	Associated infrastructure	Describe:	
4.5	Associated infrastructure	· all infrastructure required to be constructed, upgraded, relocated or decommissioned for the construction and/or operation of the project, such as access roads, power supply, connection to sewerage or water supply	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.5	Associated infrastructure	· the design and construction standards to be met	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
4.5	Associated infrastructure	· alternative approaches or the opportunity to obtain materials from alternative sources	Part A4 Project Description A1.8, & Part D, East Trinity REF D5
4.6	Decommissioning and rehabilitation	Present a plan for decommissioning and rehabilitating the site, should it ever be required	Part A4 Project Description A4.18,
5	Environmental values and management of impacts	Detail the environmental protection and mitigation measures incorporated in the planning, construction, rehabilitation, commissioning, operation and decommissioning of all facets of the project. Measures should prevent, or if not possible, minimise environmental harm and maximise environmental benefits of the project. Identify and describe preferred measures in more detail than other alternatives	Various chapters, but mostly in Part B, Technical Chapters.

5	Environmental values and management of impacts	The objectives of the following subsections are to:	Various chapters, but mostly in Part B, Technical Chapters.
5	Environmental values and management of impacts	<ul style="list-style-type: none"> describe the existing environmental values of the area that may be affected by the project, using background information and/or new studies to support statements (include reference to all definitions of environmental values set out in relevant legislation, policies and plans) 	Various chapters, but mostly in Part B, Technical Chapters.
5	Environmental values and management of impacts	<ul style="list-style-type: none"> describe the potential adverse and beneficial impacts of the project on the identified environmental values and the measures taken to avoid, minimise and/or mitigate those impacts 	Various chapters, but mostly in Part B, Technical Chapters.
5	Environmental values and management of impacts	<ul style="list-style-type: none"> describe any cumulative impacts on environmental values caused by the project, either in isolation or in combination with other known existing or planned projects 	Part B18, Cumulative Impacts
5	Environmental values and management of impacts	<ul style="list-style-type: none"> present objectives, standards and measurable indicators that protect the identified environmental values 	A1, Project Introduction, Part B (technical chapters) and Part C (EMP sets targets)
5	Environmental values and management of impacts	<ul style="list-style-type: none"> examine viable alternative strategies for managing impacts (present and compare these alternatives in view of the stated objectives and standards to be achieved) 	Various technical Chapters (Part B)
5	Environmental values and management of impacts	<ul style="list-style-type: none"> discuss the available techniques to control and manage impacts in relation to the nominated objectives 	Various technical Chapters (Part B)
5	Environmental values and management of impacts	<ul style="list-style-type: none"> Where negative impacts of the project cannot be avoided or adequately minimised or mitigated, present proposals to offset impacts in accordance with the Queensland Government Environmental Offsets Policy (Environmental Protection Agency 2008b) 	Part B18 Cumulative Impacts B18.4
5	Environmental values and management of impacts	The mitigation measures and monitoring programs, identified in this section of the EIS, should be used to develop the EMP(s) for the project. For more information, refer to Section 11.1 (page 51).	Part C, Management Plans
5.1	Climate, natural hazards and climate change	Describe the climatic conditions that may affect management of the project. This includes a description of the vulnerability of the project area to seasonal conditions, extremes of climate (for example, cyclones) and natural or induced hazards.	Part B16. Climate Change and Greenhouse Gases 16.5 and Part B18 Cumulative Impacts
5.1	Climate, natural hazards and climate change	Provide a risk assessment (as part of the requirements of Subsection 8.1 of this TOR) and management plan detailing these potential climatic threats to the construction, and operation of the project. Include the following:	Part B16. Climate Change and Greenhouse Gases 16.6
5.1	Climate, natural hazards and climate change	<ul style="list-style-type: none"> a risk assessment of changing climate patterns that may affect the viability and environmental management of the project 	Part B16. Climate Change and Greenhouse Gases 16.6
5.1	Climate, natural hazards and climate change	<ul style="list-style-type: none"> the preferred and alternative adaptation strategies to be implemented 	Part B16. Climate Change and Greenhouse Gases 16.8
5.1	Climate, natural hazards and climate change	<ul style="list-style-type: none"> commitments to working cooperatively, where practicable, with government, other industry and other sectors to address adaptation to climate change 	Part B16. Climate Change and Greenhouse Gases 16.7
5.1	Climate, natural hazards and climate change	Address the most recent information on potential impacts of climatic factors in the appropriate sections of the EIS	Part B16. Climate Change and Greenhouse Gases
5.2	Land	Detail the existing land environment values for all areas associated with the project.	Part B1 Land 1.3
5.2	Land	Describe the potential for the construction and operation of the project to change existing and potential land uses of the project sites and adjacent areas.	Part B1 Land 1.4
5.2.1	Land use and tenure	Identify, with the aid of maps:	
5.2.2	Land use and tenure	<ul style="list-style-type: none"> land tenure, including reserves, tenure of special interest (such as protected areas and forest reserves), existing and proposed gas infrastructure, water pipelines, powerlines and transport corridors, including local roads, state-controlled roads and rail corridors 	Part B1 Land 1.2
5.2.1	Land use and tenure	<ul style="list-style-type: none"> existing land uses and facilities surrounding the project 	Part B1 Land 1.2
5.2.1	Land use and tenure	<ul style="list-style-type: none"> distance of the project from residential and recreational areas 	Part B1 Land 1.2
5.2.1	Land use and tenure	<ul style="list-style-type: none"> declared water storage catchments 	Part B6 Water Resources 6.2, 6.3,
5.2.1	Land use and tenure	<ul style="list-style-type: none"> location of the project in relation to environmentally sensitive areas 	Part B2.3 Existing Nature Conservation Values

5.2.1	Land use and tenure	Describe the potential changes to existing and potential land uses due to the construction and operation of the project. In particular, describe the following:	Part B1 Land 1.4
5.2.1	Land use and tenure	<ul style="list-style-type: none"> impacts on project site and adjacent land uses and human activities and strategies for mitigation, such as those required by: <ul style="list-style-type: none"> local government planning schemes 	Part B1 Land 1.4
5.2.1	Land use and tenure	possible effect on town planning objectives and controls, including local government zoning and strategic plans	Part B1 Land 1.3
5.2.1	Land use and tenure	constraints to potential developments and possibilities of rezoning adjacent to the development area	Part B1 Land 1.3
5.2.1	Land use and tenure	<ul style="list-style-type: none"> management of the immediate environs of the project including construction buffer zones 	Part A4 Project Description A4.4 to A4.14, and Part D, East Trinity REF D5
5.2.1	Land use and tenure	<ul style="list-style-type: none"> proposed land use changes in any areas of high conservation value and information on how easement widths and any vegetation clearance in sensitive environmental areas will be minimised 	B1, Land Use, B2.3 B2.8, Nature Conservation Values, B8.7 Terrestrial Ecology, D6.6, East Trinity REF
5.2.1	Land use and tenure	<ul style="list-style-type: none"> potential issues involved in proximity and/or co-location of other current or proposed infrastructure services 	Part B1 Land 1.2
5.2.1	Land use and tenure	<ul style="list-style-type: none"> any land units requiring specific management measures 	B1, Land Use, B2.3 B2.8, Nature Conservation Values, B8.7 Terrestrial Ecology, D6.6, East Trinity REF
5.2.2	Scenic amenity and lighting	Describe, in general terms, the existing character of the landscape and the general impression that would be obtained while travelling through and around it. Outline existing landscape features, panoramas and views that have, or could be expected to have, value to the community. Include information such as maps and photographs, particularly where addressing the following issues:	Part B12 Landscape and Visual B12.2
5.2.2	Scenic amenity and lighting	<ul style="list-style-type: none"> major views, view sheds, outlooks, and features contributing to the amenity of the area, including assessment from private residences 	Part B12 Landscape and Visual B12.2
5.2.2	Scenic amenity and lighting	<ul style="list-style-type: none"> focal points, landmarks, waterways and other features contributing to the visual quality of the area and the project site 	Part B12 Landscape and Visual B12.2
5.2.2	Scenic amenity and lighting	<ul style="list-style-type: none"> character of the local and surrounding areas including vegetation and land use 	Part B12 Landscape and Visual B12.2
5.2.2	Scenic amenity and lighting	Include any relevant World Heritage and National Heritage values of the area	Part B12 Landscape and Visual B12.1
5.2.2	Scenic amenity and lighting	Describe the potential beneficial and adverse impacts of the project on landscape character and visual qualities of the site and the surrounding area. Explain what measures will be undertaken to avoid or mitigate the identified impacts.	Part B12 Landscape and Visual B12.4
5.2.2	Scenic amenity and lighting	Provide an assessment of all potential impacts of the project's lighting, during all stages, with particular reference to objectives to be achieved and management methods and strategies to be implemented to avoid or mitigate, such as:	Part B12 Landscape and Visual B12.4 and B12.5
5.2.2	Scenic amenity and lighting	<ul style="list-style-type: none"> the visual impact at night 	Part B12 Landscape and Visual B12.4 and B12.5
5.2.2	Scenic amenity and lighting	<ul style="list-style-type: none"> night operations/maintenance and effects of lighting on residents and terrestrial and marine fauna 	Part B12 Landscape and Visual B12.4 and B12.5
5.2.2	Scenic amenity and lighting	<ul style="list-style-type: none"> the potential impact of increased vehicular and marine traffic 	Part B14 Transport B14.9
5.2.2	Scenic amenity and lighting	<ul style="list-style-type: none"> changed habitat conditions for nocturnal fauna and associated impacts 	B8.7, Terrestrial Ecology, B12.5 & 6, Landscape and Visual, D6, East Trinity REF
5.2.3	Topography, geology and soils	Provide maps locating the project in state, regional and local contexts. The topography should be detailed with contours at suitable increments, shown with respect to AHD.	Part B1 Land 1.3

5.2.3	Topography, geology and soils	Include significant features of the landscape and topography, and accompanying comments on the maps.	Part B1 Land 1.3
5.2.3	Topography, geology and soils	Provide a description, map and a series of cross-sections of the geology of the project area relevant to the project components.	Part B1 Land 1.3 B1.3 and B1.7
5.2.3	Topography, geology and soils	Assess the potential for acid sulfate soils in accordance with:	Part B1 Land 1.3
5.2.3	Topography, geology and soils	· Queensland Acid Sulfate Soil Technical Manual (see	Part B1 Land 1.3
5.2.3	Topography, geology and soils	· www.derm.qld.gov.au/land/ass/products.html)	Part B1 Land 1.3
5.2.3	Topography, geology and soils	· Guidelines for Sampling and Analysis of Lowland Acid Sulfate Soils (ASS) in Queensland 1998 (Ahern et al. 1998)	Part B1 Land 1.3
5.2.3	Topography, geology and soils	· State Planning Policy 2/02: Planning and Managing Development Involving Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002a)	Part B1 Land 1.3
5.2.3	Topography, geology and soils	· State Planning Policy 2/02 Guideline: Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002b).	Part B1 Land 1.3
5.2.3	Topography, geology and soils	Provide geotechnical information on the soils' stability and suitability for construction of project facilities.	Part B1 Land 1.3
5.2.3	Topography, geology and soils	Where necessary identify any exemptions under the <i>Strategic Cropping Land Act 2011</i> or State Planning Policy 1/12: Conservation of Strategic Cropping Land (Department of Environment and Resource Management 2012b) that apply to Strategic Port Land.	Appendix C, Legislation and Approvals (note: no strategic cropping land in project footprint)
5.2.3	Topography, geology and soils	Provide a map and description of:	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	· the location of key tidal planes such as:	provided in Table B3.4.7a.
5.2.3	Topography, geology and soils	– highest astronomical tide	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	– mean high water spring tide	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	– mean high water neap tide	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	– mean sea level	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	– mean low water neap tide	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	– mean low water spring tide	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	– lowest astronomical tide	Part B3 Coastal Processes 3.4
5.2.3	Topography, geology and soils	· the bathymetry of the project area and surrounds	Part B3 Coastal Processes 3.4 and Appendix D3 Coastal Data Collation Report
5.2.3	Topography, geology and soils	· relevant coastal geomorphology, characterised and supported by illustrative mapping.	Part B3 Coastal Processes 3.4 and Appendix D3 Coastal Data Collation Report
5.2.3	Topography, geology and soils	Provide details of any potential impacts to the topography or geomorphology associated with the project and proposed mitigation measures, including:	Part B3 Coastal Processes 3.5
5.2.3	Topography, geology and soils	· a discussion of the project in the context of major topographic features and any measures taken to avoid or minimise impact to such.	Part B3 Coastal Processes 3.5
5.2.3	Topography, geology and soils	Identify any erosion management techniques to be used. Provide details of an erosion monitoring program (including rehabilitation measures for erosion problems identified during construction), and detail acceptable mitigation strategies. Summarise methods proposed to prevent or control erosion with regard to:	Part B6 Water Resources 6.4 ; C1 Construction & Operational Environmental Management Plan

5.3.1	Hydrodynamics and sedimentation	the key influencing factors of cyclones and other severe weather events and their interaction in relation to the assimilation and transport of pollutants entering marine waters from, or adjacent to, the project area.	Part B16 Climate Change and Greenhouse Gases B16.6
5.3.1	Hydrodynamics and sedimentation	Describe the environmental values of the coastal resources of the affected area in terms of the physical integrity and morphology of landforms created or modified by coastal processes.	Part B3 Coastal Processes B3.4
5.3.1	Hydrodynamics and sedimentation	Describe the tidal hydrodynamics of the project area and the adjoining tidal waterways in terms of water levels (including flushing characteristics and wave processes) and current velocities and directions at different tidal states. Two and/or three-dimensional modelling should be undertaken. Provide details of water levels and flows associated with historical and predicted storm surges.	Part B3 Coastal Processes B3.4 and Appendix D3 Climatic and Coastal Oceanographic Data Collection Data Summary Report
5.3.1	Hydrodynamics and sedimentation	Describe the wave climate in the vicinity of the project area and the adjacent beaches including inter-annual variability and details of historical and predicted extreme wave conditions generated by tropical cyclones or other severe storm events.	Part B3 Coastal Processes B3.4
5.3.1	Hydrodynamics and sedimentation	Describe the hydrology of the area and the adjacent catchments of the rivers and the associated freshwater flows within the study area and the adjoining tidal waterways in terms of water levels and discharges and possible stratification.	Part B3 Coastal Processes B3.4
5.3.1	Hydrodynamics and sedimentation	Predict the likely changes to hydrodynamics (including water levels, currents, wave conditions and freshwater flows) and sedimentation in the project area due to climate change.	Part B3 Coastal Processes B3.4
5.3.1	Hydrodynamics and sedimentation	Describe the sediment transport dynamics, including sediment budgets, in the project area and adjacent coastline detailing all sinks and sources into and out of this region that influence sediment transport rates and pathways. This should include transport mechanisms during persistent and extreme conditions showing gross and net transport rates. All influencing coastal processes should be investigated through a combination of 1d, 2d and/or 3d numerical modelling.	Part B3 Coastal Processes B3.4, B3.5
5.3.1	Hydrodynamics and sedimentation	Describe the potential changes to the hydrodynamic processes and local sedimentation resulting from the construction and operation of the project. This should include:	Part B3 Coastal Processes B3.5
5.3.1	Hydrodynamics and sedimentation	impacts on tidal flows and water levels, (including flood levels)	Part B3 Coastal Processes B3.5
5.3.1	Hydrodynamics and sedimentation	changes to sediment transport patterns in the inlet, including the potential of the proposal to impact on bank erosion and/or bed degradation within the inlet, and to alter or hinder transport pathways	Part B3 Coastal Processes B3.5
5.3.1	Hydrodynamics and sedimentation	This assessment should also discuss the potential impacts associated with vulnerability of the project to storm tide flooding and the potential of the project to affect vulnerability to storm tide flooding on adjacent properties.	Part B3 Coastal Processes B3.5
5.3.1	Hydrodynamics and sedimentation	When assessing the hydrodynamics of the area and movement of sediment along the coast, consider coastal processes such as erosion and accretion at adjacent locations.	Part B3 Coastal Processes B3.5
5.3.1	Hydrodynamics and sedimentation	Detail the impacts of the existing dredged channel and deposition site on coastal processes and sediment transport dynamics, including siltation rates and the long term fate of material deposited in the spoil area.	Part B3 Coastal Processes B3.5
5.3.1	Hydrodynamics and sedimentation	All numerical modelling to be undertaken to describe the hydrodynamic and sedimentation aspects of the project area and adjacent coastline will be calibrated and validated against measured data within the project area.	Part B3 Coastal Processes B3.3
5.3.1	Hydrodynamics and sedimentation	Assess the siltation rates of the dredged channel material and long term fate of the deposition area including the likelihood of acid sulfate soils drifting onto the adjacent beaches.	Part B3 Coastal Processes B3.5
5.3.1	Hydrodynamics and sedimentation	Describe the duration and extent of turbidity plumes from capital and maintenance dredging and deposition on the waterways and adjacent coastline. Describe this in relation to the background clarity of the receiving waters.	Part B3 Coastal Processes B3.5; Part B5, Marine Water Quality

5.3.2	Water quality	Provide reliable baseline information and detailed historical data (where relevant) on water quality of local coastal waters and other water types (as defined in EPP (Water)) potentially affected by the proposed activity that incorporates the effects of seasonal and tidal variation and that is in accordance with <i>Queensland Water Quality Guidelines</i> (Department of Environment and Resource Management 2009a) and <i>Australian and New Zealand Guidelines for Fresh and Marine Water Quality</i> (ANZECC Guidelines) (Australian and New Zealand Environment and Conservation Council & Agriculture and Resource Management Council of Australia and New Zealand 2000) methodologies.	Part B5 Marine Water Quality B5.3, and for additional analytes refer to: B4 Sediment Quality and Appendix D2 Sediment Quality Report
5.3.2	Water quality	This information should include (but is not limited to) biological, physiochemical water quality parameters such as dissolved oxygen pH, dissolved and particulate nutrients and organic carbon, temperature, salinity, total suspended solids, turbidity, light attenuation (photosynthetically active radiation) sedimentation rates. It should also include baseline information on toxicants, such as oil in water, total and dissolved metals and metalloids, ammonia, and any other relevant contaminants, such as pesticides in catchments with moderate or high degree of agricultural activities.	Part B5 Marine Water Quality B5.3
5.3.2	Water quality	Define and describe the water quality objectives and practical measures for protecting, mitigating or enhancing coastal environmental values. This includes how nominated quantitative standards and indicators may be achieved, and how the achievement of the water quality objectives will be monitored, audited and managed. The potential environmental harm caused by the project on coastal resources and processes shall be described in the context of controlling such effects. State Planning Policy 2/02: Planning and Managing Development Involving Acid Sulfate Soils (Department of Natural Resources and Mines & Department of Local Government and Planning 2002) should be addressed as should the Queensland Coastal Plan (Department of Environment and Resource Management 2012a).	Part B5 Marine Water Quality B5.2, B5.3, B5.5; Appendix C (legislation and approvals).
5.3.2	Water quality	Specific issues to be addressed include:	
5.3.2	Water quality	· the water quality objectives used (including how they were developed), and how predicted activities will meet these objectives—refer to:	Part B5 Marine Water Quality B5.1
5.3.2	Water quality	– <i>Queensland Water Quality Guidelines 2009</i> (Department of Environment and Resource Management 2009a)	Part B5 Marine Water Quality B5.1
5.3.2	Water quality	– ANZECC Guidelines (Australian and New Zealand Environment and Conservation Council & Agriculture and Resource Management Council of Australia and New Zealand 2000)	Part B5 Marine Water Quality B5.1
5.3.2	Water quality	· potential threats to the water quality and sediment quality of the coastal environment for the entire area that will be subject to increased levels of suspended sediments and sedimentation as identified through sediment plume modelling.	Part B5 Marine Water Quality B5.1
5.3.2	Water quality	For any land based disposal options for dredge spoil develop baseline water quality guideline values and investigate potential risks associated with surface and	Part D East Trinity REF, D6
5.3.2	Water quality	groundwater quality for likely discharge, runoff or seepage waters from any dredge spoil structures using the ANZECC Guidelines (Australian and New Zealand	Part D6 Water Resources B6.3, Part D East Trinity REF, D6
5.3.2	Water quality	Environment and Conservation Council & Agriculture and Resource Management Council of Australia and New Zealand 2000).	Part D6 Water Resources B6.3, Part D East Trinity REF, D6
5.3.2	Water quality	This assessment shall consider, at minimum:	
5.3.2	Water quality	· dredging and dredge material disposal, including disturbance of fine-grained sediments and contaminated material	Part B5 Marine Water Quality B5.4; Part D East Trinity REF, D6; Part B4 Marine Sediment Quality B4.3
5.3.2	Water quality	· potential accidental discharges of contaminants during construction and operation of the facility	Part C, Management Plans; Part B17, Hazard and Risk; Part B5 Marine Water Quality B5.5; Part D East Trinity REF, D6
5.3.2	Water quality	· release of contaminants from marine structures and vessels, including potential for introducing marine pests	Part B7 Marine Ecology; Part B15 Waste Management 15.4 , C4 Maritime Operations Management Plan
5.3.2	Water quality	· stormwater run-off from the facilities and associated infrastructure	Part B6 Water Resources B6.4

5.3.2	Water quality	· flooding of relevant river systems and other extreme events. · Describe strategies for protecting Ramsar wetlands; and discuss any obligations imposed by state or Commonwealth legislation or policy, or international treaty obligations (that is, JAMBA, CAMBA and ROKAMBA).	Part B6 Water Resources B6.3, 6.4
5.3.2	Water quality		Part B2 Nature Conservation Values B2.3, B2.4, B2.5; B7 Marine Ecology; B8.6 Terrestrial Ecology; Part D East Trinity REF 6.6,
5.3.3	Sediment quality and dredging	Provide baseline information on marine sediments and sediment quality in the area likely to be disturbed by dredging or vessel movements including contaminants (such as heavy metals, nutrients and pesticides), the presence of fines and/or indurated layers and acid sulfate potential. Present this information as a map of sediment types based on their physical and chemical properties and include depth profiles.	Part B4 Marine Sediment Quality B4.3
5.3.3	Sediment quality and dredging	Assessment of marine sediments should be undertaken in accordance with the <i>National Assessment Guidelines for Dredging</i> (Commonwealth of Australia 2009).	Part B4 Marine Sediment Quality B4.1.1, B4.2, B4.3 and Appendix D2 (sediment quality report)
5.3.3	Sediment quality and dredging	Provide data on management and monitoring of current maintenance dredging in the project area including an analysis of residual impacts to water quality, turbidity, sedimentation to support the statement of potential impact of proposed capital and maintenance dredging for the project.	Part B4 Marine Sediment Quality B4.2, Part B5 Marine Water Quality; Appendix D2, Sediment Quality Report
5.3.3	Sediment quality and dredging	Detail specific measures to maintain sediment quality to nominated quantitative standards within the project and surrounding areas, particularly where future maintenance dredging may be required.	B4, Sediment Quality, Appendix D2, Sediment Quality Report, B5.4, Marine Water Quality and C2, Dredge Management Plans, A2, Dredge Material Placement Options
5.3.3	Sediment quality and dredging	Comment on the choice of the disposal site in relation to coastal management outcomes, having regard to the nature of the spoil, cost of alternatives and potential impacts on coastal resources and their values.	A2, Dredge Material Placement Options, A3, Appropriateness Assessment
5.3.3	Sediment quality and dredging	Describe provisions for dredge material disposal and associated impacts on sediment quality. Discuss disposal options for contaminated material, if required. This must include a description of the arrangements to be put in place for long-term (20 years) dredge material disposal including details of proposed material placement areas and A2, Dredge Material Placement Options.	A4.4 to A4.14, Project Description, B4 Sediment Quality B4.2, B4.3,
5.4	Nature conservation	Detail the existing nature conservation values that may be affected by the proposal.	Part B2 Nature Conservation Values B2.3
5.4	Nature conservation	Describe the environmental values in terms of:	
5.4	Nature conservation	· integrity of ecological processes, including habitat of endangered, vulnerable and near-threatened (EVNT) and special least-concern species	Part B2 Nature Conservation Values B2.3
5.4	Nature conservation	· conservation of resources	Part B2 Nature Conservation Values B2.3
5.4	Nature conservation	· biological diversity, including habitat of EVNT and special least-concern species	Part B2 Nature Conservation Values B2.3
5.4	Nature conservation	· integrity of landscapes and places including wilderness and similar natural places	Part B2 Nature Conservation Values B2.3
5.4	Nature conservation	· aquatic and terrestrial ecosystems	Part D8 Terrestrial Ecology B8.4
5.4	Nature conservation	· seasonal variation in fauna and flora populations	Part D8 Terrestrial Ecology B8.4
5.4	Nature conservation	Survey effort should be sufficient to identify, or adequately extrapolate, the floral and faunal values over the range of seasons, particularly during and following a wet season. The survey should account for the ephemeral nature of watercourses traversing the proposal area, and seasonal variation in fauna populations.	Part D8 Terrestrial Ecology B8.2, B7 Marine Ecology B7.3, Part D, East Trinity REF
5.4	Nature conservation	Provide flora and fauna assessments of any dredge spoil storage and/or treatment areas where native vegetation is to be disturbed.	Part B7 Marine Ecology B7.4
5.4	Nature conservation	Where necessary, seek the involvement of the local indigenous community in conducting field observations and survey activities, to identify the traditional and contemporary indigenous uses of species.	Part B13 Cultural Heritage B13.2
5.4	Nature conservation	Also outline the proposed strategies to avoid, or minimise and mitigate, impacts on the identified values within the project's footprint.	Parts B2, Nature Conservation; B7 Marine Ecology B7.4, B7.5; B8 Terrestrial Ecology B8.7, B8.8; Part D East Trinity REF D6.6, C1. Construction & Operational Environmental Management Plan; C2 Dredge Management Plan

5.4	Nature conservation	Identify key flora and fauna indicators for ongoing monitoring.	Parts B2, Nature Conservation; B7 Marine Ecology B7.4 , B7.5; B8 Terrestrial Ecology B8.7, B8.8; Part D East Trinity REF D6.6, C1. Construction & Operational Environmental Management Plan; C2 Dredge Management Plan
5.4.1	Sensitive environmental areas	On a map of suitable scale, identify areas that are environmentally sensitive within the study area in proximity to the project. This should include areas classified as having national, state, regional or local biodiversity significance, or flagged as important for their integrated biodiversity values. Refer to Queensland legislation and policies on threatened species and ecological communities. The study area is the area that is potentially impacted by the development including sediment plume and tidal prism.	Part B2 Nature Conservation Values B2.3
5.4.1	Sensitive environmental areas	Areas regarded as sensitive with respect to flora and fauna have one or more of the following features, and should be identified and mapped:	A general description of sensitive environmental areas as defined under legislation is provided in Chapter B2, Nature Conservation. D (East Trinity REF) describes potential ecological values of the East Trinity site. More detailed description of fauna and flora is provided in Chapter B7 (Marine Ecology) & B8 (Terrestrial Ecology). All four chapters should be read in conjunction.
5.4.1	Sensitive environmental areas	· important habitat of species listed under the NC Act	Part B8 Terrestrial Ecology B8.6
5.4.1	Sensitive environmental areas	· regional ecosystems (REs) listed as 'endangered' or 'of concern' under state legislation	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	· good representative examples of remnant REs or REs that are described as having 'medium' or 'low' representation in the protected area estate as defined in the Regional Ecosystem Description Database (REDD) available at www.ehp.qld.gov.au	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	· sites containing near-threatened or bio-regionally significant species or essential, viable habitat for near-threatened or bio-regionally significant species	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	· areas or features identified as State significant biodiversity values, pursuant to the Queensland Biodiversity Offset Policy (version 1) (Department of Environment and Resource Management 2011b)	Part B2 Nature Conservation Values B2.3
5.4.1	Sensitive environmental areas	· sites recorded on the National Directory of Important Wetlands in Queensland (Blackman et al. 1999)	Part B2 Nature Conservation Values B2.3
5.4.1	Sensitive environmental areas	· sites adjacent to nesting beaches, feeding, resting or calving areas (for example, marine turtles, dugongs and cetaceans)	Part B7 Marine Ecology B7.4
5.4.1	Sensitive environmental areas	· sites containing common species that represent a distributional limit and are of scientific value or that contain feeding, breeding, resting areas for populations of species of special cultural significance	B2, Nature Conservation, B7.4, Marine Ecology, B8.4, B8.5 and B8.6, Terrestrial Ecology, D6, East Trinity REF
5.4.1	Sensitive environmental areas	· sites of high biodiversity that are of a suitable size or with connectivity to corridors and protected areas to ensure survival in the longer term; such land may contain:	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	– natural vegetation in good condition or other habitat in good condition (for example, wetlands)	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	– degraded vegetation or other habitat that still support high levels of biodiversity or act as an important corridor for maintaining high levels of biodiversity in the area	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	· a site containing other special ecological values (for example, high habitat diversity and areas of high endemism)	Parts B2, Nature Conservation; B7 Marine Ecology B7.4 , B7.5; B8 Terrestrial Ecology B8.7, B8.8; Part D East Trinity REF D6.6,
5.4.1	Sensitive environmental areas	· ecosystems that provide important ecological functions such as:	B2, Nature Conservation, B7.4, Marine Ecology, B8.4, B8.5 and B8.6, Terrestrial Ecology, D6, East Trinity REF
5.4.1	Sensitive environmental areas	– wetlands of national, state and regional significance	Part B2 Nature Conservation Values B2.3; B8 Terrestrial Ecology B8.5
5.4.1	Sensitive environmental areas	– coral reefs	Part B7 Marine Ecology B7.4

5.4.1	Sensitive environmental areas	– riparian vegetation	B2, Nature Conservation, B7.4, Marine Ecology, B8.4, B8.5 and B8.6, Terrestrial Ecology, D6, East Trinity REF
5.4.1	Sensitive environmental areas	– important buffer to a protected area or important habitat corridor between areas	B2, Nature Conservation, B7.4, Marine Ecology, B8.4, B8.5 and B8.6, Terrestrial Ecology, D6, East Trinity REF
5.4.1	Sensitive environmental areas	· declared fish habitat areas and sites containing protected marine plants under the Fisheries Act	Part B2 Nature Conservation Values B2.3; B7 Marine Ecology B7.4
5.4.1	Sensitive environmental areas	· sites of geomorphological significance	Part B3 Coastal Processes B3.4
5.4.1	Sensitive environmental areas	· areas of environmental significance as defined by the Queensland Coastal Plan (Department of Environment and Resource Management 2012a)	Part B3 Coastal Processes B3.2, Appendix C Legislation and Approvals
5.4.1	Sensitive environmental areas	· protected areas that have been proclaimed under the NC Act and Marine Parks Act, or are under consideration for proclamation	Part B2 Nature Conservation Values B2.3
5.4.1	Sensitive environmental areas	· declared areas of major interest or critical habitat declared under the NC Act	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	· declared areas of high nature conservation value or areas vulnerable to land degradation under the VM Act	Part B2 Nature Conservation Values B2.3; B8 Terrestrial Ecology B8.4, B8.5, B8.6
5.4.1	Sensitive environmental areas	· remnant vegetation listed under the VM Act as containing endangered and of-concern regional ecosystems where clearing is likely to result in land degradation and a loss of ecosystem function and biodiversity	Part B8 Terrestrial Ecology B8.4
5.4.1	Sensitive environmental areas	Identify the need to develop and implement a mitigation and management strategy for exotic marine pest species including baseline reports and monitoring programs. This should take into account the National System for the Prevention and Management of Marine Pest Incursions; Australian Marine Pest Monitoring Manual (Australian Government Department of Agriculture, Fisheries and Forestry 2010a) and Australian marine pest monitoring guidelines (Australian Government Department of Agriculture, Fisheries and Forestry 2010b) or latest editions.	Parts B15 Waste Management; B7 Marine Ecology B7.4, B7.5; C2.9 (Dredge Management Plan), C4.6 (Maritime Operations Management Plan)
5.4.1	Sensitive environmental areas	Areas of special sensitivity include the marine environment and wetlands, wildlife breeding or roosting areas, any significant habitat or relevant bird flight paths for migratory species and habitat of threatened plants, animals and communities.	Part B8 Terrestrial Ecology B8.4, B8.5, B8.6
5.4.1	Sensitive environmental areas	Discuss the impact of the project on species, communities and habitat of local, regional or state significance in sensitive environmental areas as identified above.	Part B8 Terrestrial Ecology B8.7
5.4.1	Sensitive environmental areas	Demonstrate how the project would comply with the following hierarchy:	
5.4.1	Sensitive environmental areas	· avoiding impact on areas of remnant vegetation and other areas of conservation value including the habitat of listed species	Part B8 Terrestrial Ecology B8.7 & B8.8 ; B7.4 and B7 Marine Ecology B7.5; C2.9 (Dredge Management Plan), C4.6 (Maritime Operations Management Plan)
5.4.1	Sensitive environmental areas	· mitigating impacts through rehabilitation and restoration including, where relevant, a discussion of any relevant previous experience or trials of the proposed rehabilitation	Parts B7 Marine Ecology; D East Trinity REF; Part C - Management Plans
5.4.1	Sensitive environmental areas	· replacing or offsetting the loss of conservation values, where impacts cannot be avoided or mitigated	Parts B2 Nature Conservation Areas B2.3, B2.4, B2.5; B18, Cumulative Impacts Assessment B18.4; B7 Marine Ecology B7.4; D East Trinity REF
5.4.1	Sensitive environmental areas	Explain why the measures above may not apply in areas where loss would occur.	Part B2 Nature Conservation Values B2.3, B2.4 and B2.5; B18 Cumulative Impacts Assessment B18.4; B7 Marine Ecology B7.4; D East Trinity REF 6.6
5.4.1	Sensitive environmental areas	Discuss the boundaries of the areas impacted by the project within or adjacent to an ecological community, including details of footprint width. If the project area will impact upon an endangered ecological community, include reasons for the preferred alignment and the viability of alternatives.	Part B2 Nature Conservation Values B2.3; B7 Marine Ecology B7.4; B8 Terrestrial Ecology B8.4, B8.5, B8.6; D East Trinity REF 6.6, A1 Project Overview 1.8

5.4.1	Sensitive environmental areas	Describe strategies for protecting Ramsar wetlands and discuss any obligations imposed by state or Commonwealth legislation or policies, or international treaty obligations (that is, China–Australia Migratory Bird Agreement (CAMBA), Japan–Australia Migratory Bird Agreement (JAMBA), Republic of Korea–Australia Migratory Bird Agreement (ROKAMBA)).	Part B2 Nature Conservation Values B2.3, B2.4 and B2.5; B7 Marine Ecology; B8 Terrestrial Ecology B8.6; D6.6; East Trinity REF
5.4.1	Sensitive environmental areas	Provide details about the approvals that will be required under the NC Act and the VM Act for development made assessable under SPA. The EMP for the project should address the performance requirements of the relevant policies and regional vegetation management codes (refer to www.derm.qld.gov.au/vegetation/regional_codes.html).	Part B2 Nature Conservation Values, A1.9 Key policy and Legislation Requirements; B8 Terrestrial Ecology B8.3, B8.6, B8.7, B8.8; C1.Construction & Operational Environmental Management Plan; Appendix C, Legislation and Approvals
5.4.1	Sensitive environmental areas	Where relevant, this section should discuss environmental offset requirements in accordance with the Queensland Government Environmental Offsets Policy (Environmental Protection Agency 2008b) and take into account the applicable specific-issue offset policies, as follows:	Part B2 Nature Conservation Values B2.3; B18 Cumulative Impacts Assessment 18.4.5
5.4.1	Sensitive environmental areas	<ul style="list-style-type: none"> State Policy for Vegetation Management (Department of Environment and Resource Management 2009b) 	Part B2 Nature Conservation Values, A1.9 Key policy and Legislation Requirements; B8 Terrestrial Ecology B8.3, B8.6, B8.7, B8.8; C1.Construction & Operational Environmental Management Plan; Appendix C, Legislation and Approvals
5.4.1	Sensitive environmental areas	<ul style="list-style-type: none"> Policy for Vegetation Management Offsets (Department of Environment and Resource Management 2011a) 	Part B2 Nature Conservation Values, A1.9 Key policy and Legislation Requirements; B8 Terrestrial Ecology B8.3, B8.6, B8.7, B8.8;
5.4.1	Sensitive environmental areas	<ul style="list-style-type: none"> Queensland Biodiversity Offset Policy (Department of Environment and Resource Management 2011b) 	Part B2 Nature Conservation Values, A1.9 Key policy and Legislation Requirements; B8 Terrestrial Ecology B8.3, B8.6, B8.7, B8.8;
5.4.1	Sensitive environmental areas	<ul style="list-style-type: none"> Marine fish habitat offset policy (FHMOP 005.2) (Department of Agriculture, Fisheries and Forestry 2012) 	Part B2 Nature Conservation Values, A1.9 Key policy and Legislation Requirements; B8 Terrestrial Ecology B8.3, B8.6, B8.7, B8.8; C1.Construction & Operational Environmental Management Plan; Appendix C, Legislation and Approvals
5.4.1	Sensitive environmental areas	Describe any departure from 'no net loss' of ecological values.	Part B2 Nature Conservation Values; B8 Terrestrial Ecology B8.2, B8.3, B8.6, B8.7, B8.8; B7 Marine Ecology B7.5; B18 Cumulative Impacts Assessment B18.2, B18.3,
5.4.2	Terrestrial fauna	Describe any terrestrial and riparian fauna occurring in the areas affected by the proposal, noting the broad distribution patterns in relation to vegetation, topography and substrate. The description of the fauna present or likely to be present in the study area should include:	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> species diversity (that is, a species list) and abundance of animals of recognised significance 	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> any species that are poorly known but suspected of being rare or threatened 	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> habitat requirements and sensitivity to changes, including movement corridors and barriers to movement 	Part B8 Terrestrial Ecology B8.4
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> the existence of feral pest or introduced animals including those of economic or conservation significance 	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> existence (actual or likely) of any species and communities of conservation significance in the study area, including discussion of range, habitat, breeding, 	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> recruitment feeding and movement requirements, and current level of protection (for example, any requirements of protected area management plans or threatened species recovery plans) 	Part B8 Terrestrial Ecology B8.4
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> habitat requirements and sensitivity to changes, including movement corridors and barriers to movement 	Part B8 Terrestrial Ecology B8.4
5.4.2	Terrestrial fauna	<ul style="list-style-type: none"> an estimate of commonness or rarity for the listed or otherwise significant species 	Part B8 Terrestrial Ecology B8.6

5.4.2	Terrestrial fauna	· use of the area by migratory fauna	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	· records in a form compatible with the Wildlife Online database.	Part B8 Terrestrial Ecology B8.4
5.4.2	Terrestrial fauna	Identify any species listed by the NC Act occurring in the project area. Identify any species listed by the 'Back on Track' species prioritisation methodology (refer to: www.ehp.qld.gov.au/wildlife/orientation-framework/index.html).	Part B8 Terrestrial Ecology B8.5
5.4.2	Terrestrial fauna	Indicate how well any affected communities are represented and protected elsewhere in the bio-region where the project occurs. Specify the methodology used for fauna surveys. Provide relevant site data to DEHP in a format compatible with the Wildlife Online database for listed threatened species (refer to: www.ehp.qld.gov.au/wildlife/wildlife-online/index.html).	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	Fauna survey methodology should be in accordance with the <i>Terrestrial Vertebrate Fauna Survey Assessment Guidelines for Queensland</i> (Eyre et al. 2012) (refer to: www.ehp.qld.gov.au/ecosystems/biodiversity/pdf/fauna_survey_guidelines)	Part B8 Terrestrial Ecology B8.2
5.4.2	Terrestrial fauna	Consider potential impacts on terrestrial fauna, relevant wildlife habitat and other fauna conservation values, including:	Part B8 Terrestrial Ecology B8.2
5.4.2	Terrestrial fauna	· impact and contribution by the project, to the entry, spread and establishment of pests (terrestrial and marine) not present in the project area ²⁴	Part B8 Terrestrial Ecology B8.6, B8.7
5.4.2	Terrestrial fauna	· impacts due to loss of range/habitat, food supply, nest sites, breeding/recruiting potential or movement corridors or as a result of hydrological change	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	· impacts on native species, particularly species of conservation significance	Part B8 Terrestrial Ecology B8.7
5.4.2	Terrestrial fauna	· cumulative effects of direct and indirect impacts	Part B8 Terrestrial Ecology B8.7
5.4.2	Terrestrial fauna	· threatening processes leading to progressive loss	Part B8 Terrestrial Ecology B8.7
5.4.2	Terrestrial fauna	· a description of any foreseen impacts that increase the susceptibility of ecological communities and species to the impacts of climate change	Part B8 Terrestrial Ecology B8.7; B16 Climate Change and Greenhouse Gases B16.6; B18 Cumulative Impacts Assessment B18.4
5.4.2	Terrestrial fauna	Address any actions of the project or likely impacts that require an authority under the NC Act. Provide the following information on mitigation strategies:	Part B8 Terrestrial Ecology B8.6
5.4.2	Terrestrial fauna	· measures to avoid and mitigate the identified impacts. Any provision for buffer zones and movement corridors, nature reserves or special provisions for migratory animals should be discussed and coordinated with the outputs of the flora assessment	Part B8 Terrestrial Ecology B8.6, B8.7
5.4.2	Terrestrial fauna	· measures to stop the spread, encroachment or establishment of pests within the project area	Part B8 Terrestrial Ecology B8.7; C1 Construction & Operational Environmental Management Plan
5.4.2	Terrestrial fauna	· details of the methodologies that would be used to avoid injuring native fauna as a result of the project's construction and operational works, and if accidental injuries should occur, the methodologies to assess and handle injuries	B8.7 & B8.8, Terrestrial Ecology, C1.7.2 (Construction Environmental Management Plan)
5.4.2	Terrestrial fauna	· strategies for complying with the objectives and management practices of relevant recovery plans	B8 Terrestrial Ecology B8.7, B8.8; C1 Construction & Operational Environmental Management Plan C1.7.2 (
5.4.2	Terrestrial fauna	· measures to rehabilitate disturbed areas, which incorporate provision of nest hollows and ground litter, where appropriate	B8.7 & B8.8, Terrestrial Ecology, C1.7.2 (Construction Environmental Management Plan)
5.4.2	Terrestrial fauna	Outline how these measures will be implemented in the EMP for the project	C1 Construction & Operational Environmental Management Plan
5.4.2	Terrestrial fauna	Address feral animal management strategies and practices. The study should develop strategies to ensure that the project does not contribute to increased encroachment of any feral animal species. Refer to the local government authority's pest management plan and any strategies and plans recommended for the project area by Biosecurity Queensland. Discuss the strategies in accordance with the provisions of the <i>Land Protection (Pest and Stock Route Management) Act</i> in the main body of the EIS and in the pest management plan within the EMP for the project.	B8.7 & B8.8, Terrestrial Ecology, C1.7.2 (Construction Environmental Management Plan)
5.4.3	Aquatic	Describe the aquatic flora and fauna present, or likely to be present, in the areas affected by the project. Include:	B7 Marine Ecology B7.4; B8 Terrestrial Ecology B8.2, B8.4, B8.6

5.4.3	Aquatic	<ul style="list-style-type: none"> fish species, mammals, reptiles, amphibians, crustaceans and aquatic invertebrates occurring in the waterways within the affected area and any associated wetlands (as defined under section 5 of the Fisheries Act) 	B7 Marine Ecology B7.4; B8 Terrestrial Ecology B8.2, B8.5 , B8.6
5.4.3	Aquatic	<ul style="list-style-type: none"> any rare or threatened aquatic and marine species 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> exotic and pest marine organisms 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> a description of the habitat requirements and the sensitivity of aquatic species to changes in flow regime, water levels and water quality in the project areas 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> aquatic plants, including native, exotic and weed species 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> aquatic substrate 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> habitat downstream of the project or potentially impacted due to currents in associated lacustrine and marine environments 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> stream type, including extent of tidal influence and common levels such as highest astronomical tide and mean high water springs 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> reef habitat and coral species 	Part B7 Marine Ecology B7.4
5.4.3	Aquatic	<ul style="list-style-type: none"> any other state significant biodiversity values identified in the Queensland Biodiversity Offset Policy (version 1) (Department of Environment and Resource Management 2011b) that are not described elsewhere. 	Part B2 Nature Conservation B2.3, B2.4 , B2.5; B18 Cumulative Impacts Assessment B18.4; Part D East Trinity REF D6.6, D6.16
5.4.3	Aquatic	Describe any wetlands listed by DEHP as areas of national, state or regional significance and detail their values and importance for aquatic flora and fauna species.	Part B7 Marine Ecology B7.4; B8 Terrestrial Ecology B8.4
5.4.3	Flora	Define the nature and extent of existing marine features and marine vegetation (e.g. salt couch, seagrass and mangroves) within the proposed area of development and in the areas adjacent to the project.	Part B7 Marine Ecology B7.4
5.4.3	Flora	Conduct field assessments for potentially affected plant species, preferably in both pre and post-wet season conditions taking into account potential impact processes, as follows:	Part B8 Terrestrial Ecology B8.2, B8.4; B7 Terrestrial Ecology; Part D East Trinity REF D6.6; Part C - Management Plans
5.4.3	Flora	<ul style="list-style-type: none"> record site data in a form compatible with the Queensland Herbarium CORVEG database 	Part B8 Terrestrial Ecology B8.2, B8.4; B7 Terrestrial Ecology; Part D East Trinity REF D6.6; Part C - Management Plans
5.4.3	Flora	<ul style="list-style-type: none"> record a complete list of species present at each site, including those species defined and protected under the Fisheries Act 	Part B8 Terrestrial Ecology B8.2, B8.4; B7 Terrestrial Ecology; Part D East Trinity REF D6.6; Part C - Management Plans
5.4.3	Flora	<ul style="list-style-type: none"> record the relative abundance of plant species present 	Part B8 Terrestrial Ecology B8.2, B8.4; B7 Terrestrial Ecology; Part D East Trinity REF D6.6; Part C - Management Plans
5.4.3	Flora	<ul style="list-style-type: none"> identify any plant species of conservation, cultural, commercial or recreational significance 	Part B8 Terrestrial Ecology B8.2, B8.4; B7 Terrestrial Ecology; Part D East Trinity REF D6.6; Part C - Management Plans
5.4.3	Flora	<ul style="list-style-type: none"> submit specimens of species listed as protected plants under the Nature Conservation (Wildlife) Regulation 1994 (other than common species) to the Queensland Herbarium for identification and entry into the HERBRECS database 	Part B8 Terrestrial Ecology B8.2, B8.4; B7 Terrestrial Ecology; Part D East Trinity REF D6.6; Part C - Management Plans
5.4.3	Fish habitat	Describe the nature and extent of fish habitat that have the potential to be impacted, including seagrass (permanent and ephemeral), macro-algae, mangrove and salt couch communities and sand bars/mudflats, mapped relative to existing features for reference.	Part B7 Marine Ecology B7.4
5.4.3	Fish habitat	Surveys for seagrass and algae should reflect the seasonal variation in occurrence and density of these communities. The location and density of marine plants should be mapped at an appropriate scale.	Part B7 Marine Ecology B7.4
5.4.3	Fish habitat	Show the location of any declared Fish Habitat Areas proximal to the proposed dredging site and marine infrastructure for transportation of fill	Part B7 Marine Ecology B7.4
5.4.3	Marine megafauna	Describe the turtle species that may use beaches near the proposed development area.	Part B7 Marine Ecology B7.4
5.4.3	Marine megafauna	Undertake a desktop review of information on the turtle communities of the study area, particularly the green, hawksbill, loggerhead, olive ridley and flatback turtles, paying specific attention to any anecdotal or recorded information on turtle populations frequenting the port area and any known nesting sites.	Part B7 Marine Ecology B7.4

5.4.3	Marine megafauna	Refer to studies of the turtle populations and consult the Department of National Parks, Recreation, Sport and Racing (DNPRSR) on historical data for the area, particularly on previously conducted nesting surveys.	Part B7 Marine Ecology B7.3 and B7.4
5.4.3	Marine megafauna	Consolidate available information on vessel strike data for the project area, and evaluate the proposed project (construction and ongoing operations) using a risk based methodology informed by data obtained on the populations of marine fauna.	Part B7 Marine Ecology B7.4 and B7.5 and for risk methodology: B7.3
5.4.3	Marine megafauna	Use this information to develop recommendations on the most appropriate management measures to be adopted to minimise the risk of turtle injury or death. Particular reference should be given to protecting turtles from boat strike.	Part B7 Marine Ecology B7.5
5.4.3	Benthic macro invertebrates	Describe the benthic macro invertebrate communities likely to be directly or indirectly impacted by the project should be characterised for the assessment of the potential impacts of proposed capital works. Consider the effect of ongoing maintenance activities, including dredging, on benthic fauna.	Part B7 Marine Ecology B7.4, B7.5
5.4.3	Reef communities	Describe the reef communities that may be impacted by the proposed development.	Parts B2, Nature Conservation; B18, Cumulative Impacts Assessment
5.4.3	Reef communities	Discuss the potential impacts of the project on the aquatic species and ecosystems and describe proposed mitigation actions, including:	Parts B7 Marine Ecology; C2 Dredge Management Plan
5.4.3	Reef communities	<ul style="list-style-type: none"> potential impacts to flora and fauna communities from dredging works and transporting marine fill to the project site. This should include modelling of the potential impacts of the dredge plume (for example, increased turbidity) on seagrass and other aquatic species 	Part B18 Cumulative Impacts Assessment
5.4.3	Reef communities	<ul style="list-style-type: none"> potential impacts due to alterations to the long-term hydrodynamic processes of the coastal environments, with specific reference to impacts on riparian vegetation and other sensitive vegetation communities, including mangrove stands and seagrass meadows 	Part B7 Marine Ecology B7.5
5.4.3	Reef communities	<ul style="list-style-type: none"> investigate the projects potential impact on fish spawning periods 	Part B7 Marine Ecology B7.4 and B7.5
5.4.3	Reef communities	<ul style="list-style-type: none"> offsets proposed for unavoidable, permanent loss of fisheries habitat 	Part B2 Nature Conservation B2.3, B2.4 and B2.5; B18.4, Cumulative Impacts Assessment & B7.4, Marine Ecology
5.4.3	Reef communities	<ul style="list-style-type: none"> methods to minimise the potential for introducing or spreading pest species within the project area and include the mitigation and management approaches within the biosecurity environmental management plan 	Part B7 Marine Ecology and C2 Dredge Management Plan
5.4.3	Reef communities	<ul style="list-style-type: none"> monitoring aquatic biology/health, productivity and biodiversity in areas subject to direct discharge 	Part B7 Marine Ecology B7.4, B7.5; C2 Dredge Management Plan C2.2, C2.7
5.4.3	Reef communities	<ul style="list-style-type: none"> measures to be implemented to avoid or minimise ship strike and propeller strike during construction, commissioning and operation of the project 	Part B7 Marine Ecology B7.5
5.4.3	Reef communities	<ul style="list-style-type: none"> potential impacts from climate change and the project's potential to increase the susceptibility of aquatic ecological communities and species, for example, coral bleaching. 	Part B18 Cumulative Impacts Assessment B18.4
5.4.3	Reef communities	Address any actions of the project or likely impacts that require an authority under the relevant legislation, including the NC Act and/or the Fisheries Act. Outline how these measures will be implemented in the overall EMP for the project.	Parts B2 Nature Conservation Areas B2.3 and B2.4 and Appendix C Legislation and Approvals and Part A1 Project Introduction A1.9 for key policy and legislative requirements
5.4.3	Reef communities	Provide details of the management methods which would avoid or minimise impacts on birds, marine mammals, turtles and fish, including migrations and marine plant propagation. In particular, present a discussion of existence (actual or likely) of any species and communities of conservation significance in the study area, including discussion of range, habitat, breeding, recruitment feeding and movement requirements, and current level of protection (for example, any requirements of protected area management plans or threatened species recovery plans, including, but not restricted to direct references to all relevant turtle species included in the Recovery Plan for Marine Turtles in Australia (Commonwealth of Australia 2003).	Part B7 Marine Ecology B7.4 and B7.5 and Part C2 Dredge Management Plan
5.4.3	Reef communities	Outline how these measures will be implemented in the EMP for the project.	Part C2 Dredge Management Plan

5.5.1	Water resources	Provide an overview of the quality and quantity of any water resources in the vicinity of the project area and the relevance to the project.	Part B6 Water Resources B6.2
5.5.2	Water resources	Assess the project's potential impacts on water resource environmental values identified in the previous section. Define and describe the objectives and practical measures for protecting or enhancing water resource environmental values, to describe how nominated quantitative standards and indicators may be achieved, and how the achievement of objectives will be monitored, audited and managed. Include the following:	Part B6 Water Resources B6.3
5.5.2	Water resources	<ul style="list-style-type: none"> potential impacts on the flow and the quality of surface and groundwater from all phases of the project, with reference to their suitability for the current and potential downstream uses and discharge licences 	Part B6 Water Resources B6.2
5.5.2	Water resources	<ul style="list-style-type: none"> an assessment of all likely impacts on groundwater depletion or recharge regimes 	Part B6 Water Resources B6.3, B6.4; Part DEast Trinity REF D6.5
5.5.2	Water resources	<ul style="list-style-type: none"> potential impacts of surface water flow on existing infrastructure, with reference to the EPP (Water) and the Water Act 	Part B6 Water Resources B6.3, B6.4; Part DEast Trinity REF D6.5
5.5.2	Water resources	<ul style="list-style-type: none"> chemical and physical properties of any wastewater (including stormwater at the point of discharge into natural surface waters), and the toxicity of effluent to flora and fauna 	Part B6 Water Resources B6.3, B6.4; Part DEast Trinity REF D6.5
5.5.2	Water resources	<ul style="list-style-type: none"> potential impacts on other downstream receiving environments, if it is proposed to discharge water to a riverine system 	Part B6 Water Resources B6.3, B6.4; Part D East Trinity REF D6.5
5.5.2	Water resources	<ul style="list-style-type: none"> where disposal of dredge spoil to land is being considered, the use of the ANZECC Guidelines methodology is required to derive water quality trigger values and investigate surface and groundwater quality of the receiving environment that are likely to receive discharge, runoff or seepage waters from any dredge spoil 	Part D East Trinity REF D6.5
5.5.2	Water resources	<ul style="list-style-type: none"> storage/treatment or disposal area 	Part D East Trinity REF D6.5
5.5.2	Water resources	<ul style="list-style-type: none"> the results of a risk assessment for uncontrolled releases to water due to system or catastrophic failure, implications of such emissions for human health and natural ecosystems, and strategies to prevent, minimise and contain impacts 	Part B6 Water Resources B6.3
5.5.2	Water resources	<ul style="list-style-type: none"> an assessment of the potential to contaminate surface and groundwater resources and measures to prevent, mitigate and remediate such contamination 	Part B6 Water Resources B6.3
5.5.2	Water resources	<ul style="list-style-type: none"> details of a monitoring program for the groundwater resources, using existing deep bores, to establish the base line yield and water quality of the supply from those bores 	Part B6 Water Resources B6.3
5.5.2	Water resources	<ul style="list-style-type: none"> Provide details on how changes in water quality in Trinity Inlet, as a result of dredging will affect local aquaculture ventures. 	Parts B5, Marine Water Quality; B7 Marine Ecology B7.4; B9 Socio-economic B9.5
5.5.2	Water resources	Strategies should be adequately detailed to demonstrate best practice management and that environmental values of receiving waters will be maintained to nominated water quality objectives. Describe the monitoring programs that will assess the effectiveness of management strategies for protecting water resources during the construction, operation and decommissioning of the project. Outline how these strategies are incorporated into appropriate sections of the EMP.	Parts B5, Marine Water Quality B5.1, B5.3, B5.4; B5 Marine Water Quality; B7 Marine Ecology; B9 Socio-economic; C1. Construction & Operational Environmental Management Plan; D2 Dredge Management Plan
5.6.1	Air Quality	Describe the existing air quality that may be affected by the project in the context of environmental values as defined by the EP Act and Environmental Protection (Air) Policy 2008 (LEPP (Air)).	Part B11 Air Quality B11.3
5.6.1	Air Quality	Discuss the existing local and regional air shed environment, including:	Part B11 Air Quality B11.3
5.6.1	Air Quality	<ul style="list-style-type: none"> background levels and sources of particulates, gaseous and odorous compounds and any major constituent 	Part B11 Air Quality B11.3
5.6.1	Air Quality	<ul style="list-style-type: none"> pollutants (including greenhouse gases) 	Part B11 Air Quality B11.3
5.6.1	Air Quality	<ul style="list-style-type: none"> baseline monitoring results, sensitive receptors. 	Part B11 Air Quality B11.3
5.6.2	Air Quality	Consider the following air quality issues and their mitigation:	Part B11 Air Quality B11.4

5.6.2	Air Quality	<ul style="list-style-type: none"> an inventory of air emissions from the project expected during construction and operational activities (including source, nature and levels of emissions) 	Part B11 Air Quality B11.4
5.6.2	Air Quality	<ul style="list-style-type: none"> 'worst case' emissions that may occur during operation. If these emissions are significantly higher than those for normal operations, it will be necessary to separately evaluate the worst-case impact to determine whether the planned buffer distance between the facility and neighbouring sensitive receptors will be adequate 	Part B11 Air Quality B11.4
5.6.2	Air Quality	<ul style="list-style-type: none"> ground level predictions should be made at any site that includes the environmental values identified by the EPP (Air), including any sites that could be sensitive to the effects of predicted emissions 	Part B11 Air Quality B11.4
5.6.2	Air Quality	<ul style="list-style-type: none"> dust and odour generation from construction activities, especially in areas where construction activities are adjacent to existing road networks or are in close proximity to sensitive receptors 	Part B11 Air Quality B11.4
5.6.2	Air Quality	<ul style="list-style-type: none"> climatic patterns that could affect dust generation and movement 	Part B11 Air Quality B11.4
5.6.2	Air Quality	<ul style="list-style-type: none"> vehicle emissions and dust generation along major haulage routes both internal and external to the project site 	Part B11 Air Quality B11.4
5.6.2	Air Quality	<ul style="list-style-type: none"> human health risk associated with emissions from project activities of all hazardous or toxic pollutants 	Part B11 Air Quality B11.5
5.6.2	Air Quality	<ul style="list-style-type: none"> impacts on terrestrial flora and fauna 	Part B11 Air Quality B11.5 and Part B8 Terrestrial Ecology B8.7
5.6.2	Air Quality	<ul style="list-style-type: none"> Detail the best practice mitigation measures together with proactive and predictive operational and maintenance strategies that could be used to prevent and mitigate impacts. 	Part B11 Air Quality B11.4
5.6.2	Air Quality	<ul style="list-style-type: none"> Discuss potential air quality impacts from emissions, with reference to the National Environmental Protection (Ambient Air Quality) Measure 2003 (Cwith) and the EPP (Air). If an emission is not addressed in these legislative instruments, discuss the emission with reference to its risk to human health, including appropriate health-based guidelines/standards 	Part B11 Air Quality B11.3 and B11.4
5.7.1	Greenhouse Gas Emissions	<ul style="list-style-type: none"> Provide an inventory of projected annual emissions for each relevant greenhouse gas, with total emissions expressed in 'CO2 equivalent' terms for the following categories: <ul style="list-style-type: none"> scope 1 emissions—means direct emissions of greenhouse gases from sources within the boundary of the facility and as a result of the facility's activities (including emission from vegetation clearing) scope 2 emissions—means emissions of greenhouse gases from the production of electricity, heat or steam that the facility will consume, but that are physically produced by another facility. 	Part B16 Climate Change & Greenhouse Gases B16.6
5.7.1	Greenhouse Gas Emissions	<ul style="list-style-type: none"> scope 1 emissions—means direct emissions of greenhouse gases from sources within the boundary of the facility and as a result of the facility's activities (including emission from vegetation clearing) 	Part B16 Climate Change & Greenhouse Gases B16.6
5.7.1	Greenhouse Gas Emissions	<ul style="list-style-type: none"> scope 2 emissions—means emissions of greenhouse gases from the production of electricity, heat or steam that the facility will consume, but that are physically produced by another facility. 	Part B16 Climate Change & Greenhouse Gases B16.6
5.7.1	Greenhouse Gas Emissions	<ul style="list-style-type: none"> Briefly describe method(s) by which estimates were made. 	Part B16 Climate Change & Greenhouse Gases B16.3
5.7.1	Greenhouse Gas Emissions	<ul style="list-style-type: none"> Use the <i>National Greenhouse Accounts (NGA) Factors</i> (Commonwealth of Australia 2010c) as a reference source for emission estimates, supplemented by other sources where practicable and appropriate. As a requirement of the NGA factors, estimates should include the loss of carbon sink capacity of vegetation due to clearing and impoundment. 	Part B16 Climate Change & Greenhouse Gases B16.6
5.7.2	Greenhouse Gas Emissions	<ul style="list-style-type: none"> Discuss the potential for greenhouse gas abatement measures, including: <ul style="list-style-type: none"> the proposed measures (alternatives and preferred) to avoid and/or minimise direct greenhouse gas emissions how the preferred measures minimise emissions and achieve energy efficiency 	Part B16 Climate Change & Greenhouse Gases B16.7
5.7.2	Greenhouse Gas Emissions	<ul style="list-style-type: none"> any opportunities to further offset greenhouse gas emissions through indirect means including sequestration and carbon trading. 	Part B16 Climate Change & Greenhouse Gases B16.7
5.7.2	Greenhouse Gas Emissions	<ul style="list-style-type: none"> Describe the existing noise and vibration environment that may be affected by the project in the context of the environmental values defined by the Environmental Protection (Noise) Policy 2008 (EPP (Noise)). Refer to the following documents: <ul style="list-style-type: none"> <i>Noise Measurement Manual</i> (Environment Protection Agency 2000) <i>Guideline: Planning for Noise Control</i> (Environment Protection Agency 2004) 	Part B16 Climate Change & Greenhouse Gases B16.7
5.8.1	Noise and Vibration	<ul style="list-style-type: none"> any opportunities to further offset greenhouse gas emissions through indirect means including sequestration and carbon trading. 	Part B16 Climate Change & Greenhouse Gases B16.7
5.8.1	Noise and Vibration	<ul style="list-style-type: none"> Describe the existing noise and vibration environment that may be affected by the project in the context of the environmental values defined by the Environmental Protection (Noise) Policy 2008 (EPP (Noise)). Refer to the following documents: <ul style="list-style-type: none"> <i>Noise Measurement Manual</i> (Environment Protection Agency 2000) <i>Guideline: Planning for Noise Control</i> (Environment Protection Agency 2004) 	Part B10 Noise and Vibration B10.2
5.8.1	Noise and Vibration	<ul style="list-style-type: none"> any opportunities to further offset greenhouse gas emissions through indirect means including sequestration and carbon trading. 	Part B10 Noise and Vibration B10.2

5.8.1	Noise and Vibration	Identify sensitive noise receptors adjacent to all project components both in air and underwater (e.g. marine species sensitive to underwater noise) and estimate typical background noise and vibration levels based on surveys at representative sites. Discuss the potential sensitivity of such receptors and nominate performance indicators and standards.	Part B10 Noise and Vibration B10.4
5.8.2	Noise and Vibration	Describe the impacts of noise and vibration both in air and underwater generated during the pre-construction, construction, operational and decommissioning phases of the project. Noise and vibration impact analysis should include:	Part B10 Noise and Vibration B10.3
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> the levels of noise and vibration generated, including noise contours, assessed against current typical background levels, using modelling (such as Environmental Noise Model e.g., SoundPLAN) where appropriate. 	Part B10 Noise and Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> impact of noise, including low frequency noise (noise with components below 200 Hz) and vibration at all potentially sensitive receivers (for example, residences, social and public infrastructure, such as health, recreational and educational facilities and marine life where impact of noise may have a significant biological significance) compared with the performance indicators and standards nominated above in Section 5.8.1 	Part B10 Noise and Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> impact on terrestrial, avian and aquatic fauna 	Part B10 Noise and Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> proposals to minimise or eliminate these effects, including details of any screening, lining, enclosing or bunding of facilities, or timing schedules for construction and 	Part B10 Noise and Vibration B10.6
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> operations that would minimise environmental harm and environmental nuisance from noise and vibration both in air and/or underwater 	Part B10 Noise and Vibration B10.6
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> options for air sensitive receptors that are otherwise unable to achieve a satisfactory internal noise level for the preservation of health and wellbeing as identified within the EPP (Noise). 	Part B10 Noise and Vibration B10.6
5.8.2	Noise and Vibration	Provide details of any night-time work that may be undertaken. Specifically include:	Parts A4 Project Description A4.5; B9 Socio-economic B9.6; B10 Noise & Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> the reasons why night-time work may be undertaken 	Parts A4 Project Description A4.5; B10 Noise & Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> the likely duration of work (if known) 	Parts A4 Project Description A4.5; B10 Noise & Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> the proposed hours of the work 	Parts A4 Project Description A4.5; B10 Noise & Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> the nature of the work to be undertaken 	Parts A4 Project Description A4.5; B10 Noise & Vibration B10.5
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> the likely impact on residents and the associated mitigation measures to be undertaken by the proponent 	Part B10 Noise and Vibration B10.5; B10.6
5.8.2	Noise and Vibration	<ul style="list-style-type: none"> the methods that will be used to communicate with affected residents. 	Part B10 Noise and Vibration B10.6
5.9.1	Waste	Identify and describe all sources, likely volumes and quality (where applicable) of waste associated with pre-construction, construction, operation and decommissioning of all aspects of the project. Refer to regulated waste listed in Schedule 7 of the Environmental Protection Regulation 2008 (Qld).	Part B15 Waste Management B15.5
5.9.1	Waste	Describe:	Parts B15 Waste Management B15.5; B17 Hazard and Risk B17.5
5.9.1	Waste	<ul style="list-style-type: none"> waste generated by delivery of material to site(s) all chemical and mechanical processes conducted on the construction sites that produce waste 	Parts B15 Waste Management B15.5; B17 Hazard and Risk B17.5
5.9.1	Waste	<ul style="list-style-type: none"> the amount and characteristics of solid and liquid waste produced on site by the project 	Parts B15 Waste Management B15.5; B17 Hazard and Risk B17.5
5.9.1	Waste	<ul style="list-style-type: none"> hazardous materials to be stored and/or used on site, including environmental toxicity data and biodegradability. 	Parts B15 Waste Management B15.5; B17 Hazard and Risk B17.5
5.9.2	Waste	Detail the proposed management of solid and liquid waste. Assess the potential impact of all waste generated during construction and operation, with regard for best practice	Parts B15 Waste Management B15.5; B17 Hazard and Risk B17.5
5.9.2	Waste	waste management strategies, the Environmental Protection (Waste Management) Policy 2000 and the Environmental Protection (Waste Management) Regulation 2000 (Qld).	Parts B15 Waste Management B15.5; B17 Hazard and Risk B17.5
5.9.2	Waste	Provide details on marine plant impacts on the land area designated for on-ground soil disposal if a land disposal option is chosen.	Part D East Trinity REF, D.6.

5.10.1	Transport	If a terrestrial location is required for a land based spoil ground/dredge material placement area, provide a detailed traffic impact assessment report for all modes of transport. The EIS should clearly identify and assess all impacts associated with a land based dredge material placement area for all modes of transport and identify effective mitigation strategies for these impacts.	Part D East Trinity REF, D6.1.2
5.10.1	Transport	Present the transport assessment in separate reports for each project-affected mode (road, rail, air and sea) as appropriate for each phase of the project. These assessment reports should provide sufficient information to allow an independent assessment of how existing transport infrastructure will be affected by project transport at the local and regional level.	Parts B14 Transport B14.9; C3 Vessel Transport Management Plan; C4. Maritime Operations Management Plan
5.10.1	Transport	Describe the extent, condition and capacity of the existing transport infrastructure on which the project will depend.	Part B14 Transport B14.6
5.10.2	Transport	Provide a summary of all the freight tasks (inputs and outputs, including wastes) associated with all phases of the project. The summary will be in tabular form (or other suitable format) and include for each freight task:	Part B14 Transport B14.6, B14.7
5.10.2	Transport	· tonnage/volume	Part B14 Transport B14.6
5.10.2	Transport	· proposed transport methodologies (modes, vehicle types, payloads)	Part B14 Transport B14.6
5.10.2	Transport	· estimates of the number of discrete trips required for each task	Part B14 Transport B14.6
5.10.2	Transport	· origins of inputs and destinations of outputs (including wastes)	Part B14 Transport B14.6
5.10.2	Transport	· cross reference to the relevant section in the EIS where the task is fully described and/or assessed.	Part B14 Transport B14.6
5.10.2	Transport	For each mode of transport and each phase of the project, provide traffic generation information on:	Part B14 Transport B14.3, B14.6, B14.10, B14.12
5.10.2	Transport	· existing background traffic including volumes, composition, peak traffic and peak times along the transport routes to and from the project	Part B14 Transport B14.6
5.10.2	Transport	· background traffic growth for the transport routes for all stages of the project life	Part B14 Transport B14.6
5.10.2	Transport	· the construction of any project-related plant and utilities within or impacting on the jurisdiction of any transport authority	Part B14 Transport B14.9
5.10.2	Transport	· the stages, timing and duration of each stage/phase and how these impact on the transport-related infrastructure	Part B14 Transport B14.9
5.10.2	Transport	· comparison of the traffic situation and road conditions with and without the project	Part B14 Transport B14.9
5.10.2	Transport	· expected volumes of project inputs and outputs of transported raw materials, plant, construction materials and operational equipment, waste, hazardous goods and finished products for all phases of the project	Parts B14 Transport B14.9; Part A4 Project Description A4.5
5.10.2	Transport	· how identified project inputs and outputs will be moved through the local and regional transport network (including number and type of vehicles, mode, volume, composition, trip timing and routes)	Part B14 Transport B14.9
5.10.2	Transport	· traffic generated by workforce personnel including visitors (volume, composition, timing and routes)	Part B14 Transport B14.9
5.10.2	Transport	· likely heavy, oversize and indivisible loads (volume, composition, timing and routes) highlighting any vulnerable bridges and structures along proposed routes.	Part B14 Transport B14.9
5.10.2	Transport	Describe:	
5.10.2	Transport	· access locations (existing and proposed) to state-controlled roads	Part B14 Transport B14.9
5.10.2	Transport	· locations of proposed road-crossing points of existing and proposed rail infrastructure associated with the project.	Not relevant
5.10.2	Transport	Presentation of data is to be in a format similar to A Road Management Information System (ARMIS).	Part B14 Transport B14.9
5.10.3	Transport	Impact assessment reports should include details of the adopted assessment methodology (for impacts on roads: the road impact assessment report in accordance with the <i>Guidelines for Assessment of Road Impacts of Development</i>) (Department of Main Roads 2006). Assessment of traffic impacts is to include the transport arrangements for permanent and temporary workforce associated with all phases of the project.	Part B14 Transport B14.9

5.10.3	Transport	Assess project impacts on:	Part B14 Transport B14.9 ; B18 Cumulative Impacts Assessment
5.10.3	Transport	<ul style="list-style-type: none"> local and state-controlled road networks, including key road and road/rail intersections, at project construction, operation and decommissioning stages. Any impact to level crossings should be assessed using the Australian Level Crossing Assessment Model (ALCAM) 	Part B14 Transport B14.9
5.10.3	Transport	<ul style="list-style-type: none"> capacity, safety, local amenity, efficiency and condition of transport operations, services and assets from either transport or project operations, including an assessment of pavement life of the road network as a result of the project. Refer, where relevant, to the Queensland Road Safety Action Plan 2010–2011 (Department of Transport and Main Roads 2010). 	Part B14 Transport B14.9
5.10.3	Transport	<ul style="list-style-type: none"> possible interruptions to transport operations 	Part B14 Transport B14.9
5.10.3	Transport	<ul style="list-style-type: none"> the natural environment within the jurisdiction of an affected transport authority (for example, road and rail corridors) 	Various technical chapters (Part B).
5.10.3	Transport	<ul style="list-style-type: none"> the nature and likelihood of product-spill to both land and marine environments during transport, if relevant 	Part B17 Hazard and Risk B17.5; B7 Marine Ecology B7.5
5.10.3	Transport	<ul style="list-style-type: none"> any existing or proposed strategies for public passenger transport and active transport and address, where relevant, requirements of Part 2A of the Transport Planning and Coordination Act 	Part B14 Transport B14.9
5.10.3	Transport	<ul style="list-style-type: none"> access to transport for people with a disability 	Part B14 Transport B14.6
5.10.3	Transport	<ul style="list-style-type: none"> transport and handling of hazardous substances and dangerous goods 	Part B17 Hazard and Risk B17.5; B7 Marine Ecology B7.5
5.10.3	Transport	<ul style="list-style-type: none"> the cumulative impact of this project adding to the impact of other known proposed or current major projects impacting on the road network. 	Part B14 Transport B14.11 and Part B18 Cumulative Impacts Assessment
5.10.4	Transport	Detail:	
5.10.4	Transport	<ul style="list-style-type: none"> any proposed alterations or new transport-related infrastructure and services required by the project (as distinct from impact mitigation works) 	Part B14 Transport B14.9
5.10.4	Transport	<ul style="list-style-type: none"> construction of any project-related plant and utilities, within or impacting on the jurisdiction of any transport authority. 	Part A4 Project Description A4.4
5.10.5	Transport	<ul style="list-style-type: none"> Discuss and recommend how identified impacts will be mitigated so as to maintain safety, efficiency and condition of each mode. These mitigation strategies are to be 	Part B14 Transport B14.10
5.10.5	Transport	<ul style="list-style-type: none"> prepared in close consultation with relevant transport authorities (including local government), consider those authorities' works program and forward planning, and be in accordance with the relevant transport authorities' methodologies and design manuals. 	Part B14 Transport B14.1, B14.3
5.10.5	Transport	<ul style="list-style-type: none"> Findings of studies and transport infrastructure impact assessments should be an input into preparing a transport management plan. 	Part B14 Transport B14.10; C1 Construction & Operational Environmental Management Plan
5.10.5	Transport	Outline:	
5.10.5	Transport	<ul style="list-style-type: none"> procedures for assessing and agreeing on the scope of required mitigation works with road/rail corridor managers (for example, maintenance or upgrades), including any associated works, such as sourcing water and gravel 	Part A4 Project Description A4.2, A4.9, A4.11 and Part B14 Transport B14.10
5.10.5	Transport	<ul style="list-style-type: none"> strategies to minimise the effects of project transport on existing and future public road or rail corridors 	Part B14 Transport B14.10
5.10.5	Transport	<ul style="list-style-type: none"> steps to be taken to prevent access from public roads/rail corridors to the project sites 	Part B14 Transport B14.10, B14.11
5.10.5	Transport	<ul style="list-style-type: none"> strategies to maintain safe access to public road/rail reserves to allow road/rail/pipeline maintenance activities 	Part B14 Transport B14.10, B14.11
5.10.5	Transport	<ul style="list-style-type: none"> process for decommissioning any temporary access to road/rail reserves, for example, stockpile sites 	Part B14 Transport B14.10, B14.11
5.10.5	Transport	<ul style="list-style-type: none"> Findings of studies and transport infrastructure impact assessments should be an input into preparing a draft road-use management plan. Conditions of approval for transport management impacts should also be detailed in the EMP. 	Part B14 Transport B14.10, B14.11; C1 Construction & Operational Environmental Management Plan
5.10.5	Shipping management planning	<ul style="list-style-type: none"> Develop management plans in accordance with the <i>Maritime Safety Queensland Guidelines for Major Development Proposals</i> (Department of Transport and Main Roads 2010). 	Parts C2 Dredge Management Plan & C3 Vessel Transport Management Plan; C4 Maritime Operations Management Plan

5.10.5	Shipping management planning	Consult the Regional Harbour Master on maritime issues relating to moving and loading tankers and any barge operations (for example, dredging). Discuss the results of the consultation in the EIS.	Parts C2 Dredge Management Plan & C3 Vessel Transport Management Plan; C4 Maritime Operations Management Plan; Appendix B (Stakeholder and Community Engagement Report)
5.10.5	Shipping management planning	Describe current vessels using the port and in the Commonwealth Marine Area, their size, shipping movements, anchorages, access to/from the port and navigational arrangements.	Parts A4 Project Description A4.2, A4.3; B18 Cumulative Impacts Assessment 18.3; & Appendix D6.6. Cairns Cruise Shipping Development – Demand Study, 2014
5.10.5	Shipping management planning	In regard to increased shipping volumes, address the following:	Parts C4 Maritime Operations Management Plan; B7 Marine Ecology B7.4
5.10.5	Shipping management planning	<ul style="list-style-type: none"> potential for introduction of exotic organisms from increased shipping rates, including the Asian green mussel 	Parts C4 Maritime Operations Management Plan; B7 Marine Ecology B7.4
5.10.5	Shipping management planning	<ul style="list-style-type: none"> ballast water management arrangements—including Australian Quarantine and Inspection Service mandatory arrangements and agency contingency planning 	Parts C4 Maritime Operations Management Plan; B7 Marine Ecology B7.4
5.10.5	Shipping management planning	<ul style="list-style-type: none"> management of ship waste, in particular quarantine waste, domestic garbage, oil and sewage 	Parts B7 Marine Ecology B7.5; B15 Waste Management; C4 Maritime Operations Management Plan;
5.10.5	Shipping management planning	<ul style="list-style-type: none"> risk of spills and their management 	Parts C4 Maritime Operations Management Plan; B7 Marine Ecology B7.5

5.11.1	Indigenous cultural heritage	Describe the existing Indigenous cultural heritage values that may be affected by the project and the environmental values of the cultural landscapes of the affected area in terms of the physical and cultural integrity of the landscapes.	Part B13 Cultural Heritage B13.4
5.11.1	Indigenous cultural heritage	Explain the significance of artefacts, items or places of Indigenous cultural heritage value likely to be affected by the project at a local, regional, state and national level.	Part B13 Cultural Heritage B13.4
5.11.1	Indigenous cultural heritage	Also describe how, in conjunction with the appropriate Indigenous people, subject to confidentiality requirements, the cultural heritage values were ascertained. This could include:	Part B13 Cultural Heritage B13.2
5.11.1	Indigenous cultural heritage	<ul style="list-style-type: none"> the results of any Aboriginal cultural heritage survey undertaken 	Part B13 Cultural Heritage B13.2
5.11.1	Indigenous cultural heritage	<ul style="list-style-type: none"> the DNRM Aboriginal Cultural Heritage Register and Database 	Part B13 Cultural Heritage B13.2
5.11.1	Indigenous cultural heritage	<ul style="list-style-type: none"> any existing literature relating to Indigenous cultural heritage in the project area. 	Part B13 Cultural Heritage B13.2
5.11.2	Indigenous cultural heritage	Provide an assessment of likely effects on sites of Indigenous cultural heritage values.	Part B13 Cultural Heritage B13.6
5.11.2	Indigenous cultural heritage	Define and describe the objectives and practical measures for protecting or enhancing Indigenous cultural heritage environmental values. Describe how nominated quantitative standards and indicators may be achieved for cultural heritage management, and describe how the achievement of the objectives will be monitored, assessed and managed.	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	As a minimum, impact assessment, management and protection strategies should satisfy statutory responsibilities and duties of care.	C1 Construction & Operational Environmental Management Plan

5.11.2	Indigenous cultural heritage	During the EIS process, the proponent should initiate a native title agreement (NT agreement), as defined under the ACH Act, which includes management and protection strategies for Indigenous cultural heritage or a Cultural Heritage Management Plan (CHMP) under the ACH Act. An NT agreement or an approved CHMP in a form that complies with Part 7 of the ACH Act will ensure that the project meets the Aboriginal cultural heritage duty of care imposed by the ACH Act.	B13.2
5.11.2	Indigenous cultural heritage	An NT agreement or CHMP should be negotiated between the proponent and the appropriate native title/Indigenous parties and should include the following:	Part B13 Cultural Heritage B13.3, B13.7
5.11.2	Indigenous cultural heritage	· a process for including Indigenous people associated with the development areas in protecting and managing Indigenous cultural heritage	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	· processes for mitigating, managing and protecting identified cultural heritage sites and objects in the project areas, including associated infrastructure developments,	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	· during both the construction and operational phases of the project	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	· provisions for managing the accidental discovery of cultural material, including burials	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	· a clear recording process to assist initial management and recording of accidental discoveries	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	· a cultural heritage induction for project staff	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	· developing a cultural heritage awareness program to be incorporated into the contractor/employee manual and induction manual. This is to be in the form of a plain language, short document that is easy for contractors and staff 'on the ground' to understand	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	· a conflict resolution process.	Part B13 Cultural Heritage B13.7
5.11.2	Indigenous cultural heritage	If an NT agreement is not finalised or a CHMP has not been approved when the EIS is submitted to the Coordinator-General, the following must be provided:	Part B13 Cultural Heritage B13.3, B13.7
5.11.2	Indigenous cultural heritage	· an outline of the draft CHMP or draft plan within the NT agreement that addresses management and protection strategies for cultural heritage, subject to any confidentiality provisions, outlining the position of the relevant parties	Part B13 Cultural Heritage B13.3, B13.7
5.11.2	Indigenous cultural heritage	· details of the proposed steps and timeframes for finalising the CHMP or NT agreement.	Part B13 Cultural Heritage B13.3, B13.7
5.11.3	Indigenous cultural heritage	Identify areas covered by applications for native title claims or native title determinations, providing boundary descriptions of native title representative body(ies), and whether it is necessary to notify the representative body(ies) or if there is evidence that native title does not exist.	Part B13 Cultural Heritage B13.2
5.11.3	Indigenous cultural heritage	Identify the potential for native title rights and interests likely to be impacted upon by the project and the potential for managing those impacts by an Indigenous land use agreement or other native title compliance outcomes.	Part B13 Cultural Heritage B13.2
5.12.1	Non-Indigenous cultural heritage	Include a cultural heritage study/survey that describes non-Indigenous cultural heritage sites and places, and their values.	Part B13 Cultural Heritage B13.4
5.12.1	Non-Indigenous cultural heritage	Describe the significance of artefacts, items or places of conservation or non-Indigenous cultural heritage value likely to be affected by the project and their values at a local, regional, state and national level.	Part B13 Cultural Heritage B13.4
5.12.1	Non-Indigenous cultural heritage	Any such study should be conducted by an appropriately qualified cultural heritage practitioner and should include the following:	Part B13 Cultural Heritage B13.4
5.12.1	Non-Indigenous cultural heritage	· review of:	Part B13 Cultural Heritage B13.4
5.12.1	Non-Indigenous cultural heritage	– the Australian Heritage Places Inventory	Part B13 Cultural Heritage B13.4
5.12.1	Non-Indigenous cultural heritage	– the Queensland Heritage Register and other information regarding places of potential non-Indigenous cultural heritage significance	Part B13 Cultural Heritage B13.4
5.12.1	Non-Indigenous cultural heritage	– any local government heritage register	Part B13 Cultural Heritage B13.4

5.12.1	Non-Indigenous cultural heritage	– any existing literature relating to the heritage of the affected areas	Part B13 Cultural Heritage B13.4
5.12.1	Non-Indigenous cultural heritage	· liaison with relevant community groups/organisations (for example, local historical societies) concerning places of non-Indigenous cultural heritage significance located or identified	Part B13 Cultural Heritage B13.2
5.12.1	Non-Indigenous cultural heritage	· locations of culturally and historically significant sites, shown on maps, which could potentially be impacted by the project	Part B13 Cultural Heritage B13.2
5.12.1	Non-Indigenous cultural heritage	· a constraints analysis of the proposed development area to identify and record non-Indigenous cultural heritage places.	Part B13 Cultural Heritage B13.6
5.12.2	Non-Indigenous cultural heritage	Provide an assessment of any likely effects on sites of non-Indigenous cultural heritage values.	Part B13 Cultural Heritage B13.6
5.12.2	Non-Indigenous cultural heritage	Provide strategies to mitigate and manage any negative impacts on non-Indigenous cultural heritage values and enhance any positive impacts.	Part B13 Cultural Heritage B13.7
5.12.2	Non-Indigenous cultural heritage	As a minimum, investigation, consultation, impact assessment, management and protection strategies should satisfy statutory responsibilities and duties of care.	Part B13 Cultural Heritage B13.6
6.1.1	Social and cultural area	Conduct a social impact assessment and define the project's social and cultural area of influence, including the local, district, regional and state level as relevant, taking into account the:	Part B13 Cultural Heritage B13.5. See B18 for information on other relevant proposals.
6.1.1	Social and cultural area	· potential for social and cultural impacts to occur	Part B9 Socio-Economic B9.7
6.1.1	Social and cultural area	· location of other relevant proposals or projects	Part B9 Socio-Economic B9.7
6.1.1	Social and cultural area	· location and types of physical and social infrastructure, settlement and land use patterns	Part B9 Socio-Economic B9.5
6.1.1	Social and cultural area	· social values that might be affected by the project (for example, integrity of social conditions, visual amenity and liveability, social harmony, public health and wellbeing, and sense of community)	Part B9 Socio-Economic B9.7
6.1.1	Social and cultural area	· Indigenous social and cultural characteristics such as native title rights and interests, and cultural heritage.	Parts B13 Cultural Heritage and B18 Cumulative Impacts (native title rights/interest and cultural heritage)
6.1.2	Community engagement	Consistent with national and international good practice, and with regard to local and regional strategies for community engagement, the proponent should undertake a community engagement strategy to engage at the earliest practicable stage with likely affected parties to discuss and explain the project, and to identify and respond to issues and concerns regarding social impacts.	Part B9 Socio-Economic B9.3
6.1.2	Community engagement	Detail the community engagement processes used to conduct open and transparent dialogue with stakeholders. Such processes should include, but not be limited to, community reference group forums. Include the project's planning and design stages and future operations including affected local and state authorities. Engagement processes should consider social and cultural factors, customs and values, and, where relevant, linkages between environmental, economic, and social impact issues.	Part B9 Socio-Economic B9.3
6.1.2	Community engagement	Discuss engagement strategies and processes, including how complaint resolution will be addressed, for all stages of the project.	Parts A1 Project Introduction A1.11 and B9 Socio-Economic Assessment and Appendix B Stakeholder and Community Engagement Report
6.1.3	Workforce profile	The SIA should include a profile of the workforce that describes the following:	Part B9 Socio-Economic B9.6
6.1.3	Workforce profile	Workforce demand	Part B9 Socio-Economic B9.6
6.1.3	Workforce profile	The estimated composition of workforce by occupation, project stage and duration (including any planned construction prior to final investment decision) using the	Part B9 Socio-Economic B9.7
6.1.3	Workforce profile	template provided at www.skills.qld.gov.au/significant/projects.aspx	Part B9 Socio-Economic B9.5, B9.6
6.1.3	Workforce profile	Supply issues and strategies	Part B9 Socio-Economic B9.5, B9.6
6.1.3	Workforce profile	· Analysis of relevant local, state and national workforce profiles and labour supply strategies and proposed programs for:	Part B9 Socio-Economic B9.5, B9.6
6.1.3	Workforce profile	– recruitment and attraction	Part B9 Socio-Economic B9.5, B9.6
6.1.3	Workforce profile	– population groups (including Indigenous people, women, secondary school students and unemployed and underemployed)	Part B9 Socio-Economic B9.5, B9.6
6.1.3	Workforce profile	– unskilled and semi-skilled labour requirements	Part B9 Socio-Economic B9.5, B9.6

6.1.3	Workforce profile	– structured training (apprenticeships, traineeships, graduates)	Part B9 Socio-Economic B9.5, B9.6
6.1.3	Workforce profile	– analysis of impact on local community workforce.	Part B9 Socio-Economic B9.5, B9.6
6.1.3	Workforce profile	Identify any gaps/opportunities in workforce planning particularly, tourism and hospitality skills and associated skills, in the short (3-5 years) and medium to longer term (5–15 years), with a particular focus on maritime skills and port-related activities.	Part B9 Socio-Economic B9.6, B9.7
6.1.3	Workforce profile	· Particular reference should be made to the following documents:	Part B9 Socio-Economic B9.6, B9.7
6.1.3	Workforce profile	– <i>Tropical North Queensland Destination Tourism Strategy 2012–2016</i> (Tourism Tropical North Queensland and Tourism Queensland 2010)	Part B9 Socio-Economic B9.6, B9.7
6.1.3	Workforce profile	– <i>Tropical North Queensland Tourism Opportunity Plan 2010–2020</i> (Tourism Queensland 2010).	Part B9 Socio-Economic B9.6, B9.7
6.1.3	Workforce profile	The fact sheet on Skills Queensland's website	Part B9 Socio-Economic B9.6, B9.7
6.1.3	Workforce profile	(www.skills.qld.gov.au/significantprojects.aspx) provides essential information, contact and program details to develop the workforce management plan.	Part B9 Socio-Economic B9.6, B9.7
6.2	Social and Economic	Assess and describe the type, level and significance of the project's social impacts (both beneficial and adverse) on the local and cultural area, based on outcomes of community engagement processes and the social baseline study. Furthermore:	Part B9 Socio-Economic B9.6, B9.7 and Appendix B Stakeholder and Community Engagement Report
6.2	Social and Economic	· describe and summarise outcomes of community engagement processes including the likely response of the affected communities, including indigenous people	Part B9 Socio-Economic B9.3
6.2	Social and Economic	· address direct, indirect and secondary impacts from any existing projects and the proposed project including an assessment of the size, significance, and likelihood of these impacts at the local and regional level. Consider the following:	Part B9 Socio-Economic B9.6, B9.7
6.2	Social and Economic	– local, regional and state labour markets during the construction and operational phases, with regard to the source of the workforce. Present this information according to occupational workforce groupings. Detail whether the proponent and/or contractors are likely to employ locally or through other means and whether there are initiatives for local employment business opportunities and how these workforce strategies relate and align to state and Commonwealth resource workforce planning, skill development and training strategies and policies	Part B9 Socio-Economic B9.6 and Part B18 Cumulative Impacts B18.2 reviews other (relevant) proposals
6.2	Social and Economic	– proposed new skills and training related to the project including the occupational skill groups required and potential skill shortages anticipated	Part B9 Socio-Economic B9.7
6.2	Social and Economic	– impacts of construction and operational workforces, their families, and associated contractors on housing and accommodation availability and affordability.	Part B9 Socio-Economic B9.6, B9.7
6.2	Social and Economic	Undertake an assessment of the impact of the passengers from the cruise ships on the social infrastructure in Cairns including civic facilities, services and networks.	Part B9 Socio-Economic B9.5, B9.6, B9.7
6.2	Social and Economic	The anticipated activities and duration of the stay should be taken into account to determine downstream impacts on infrastructure.	Part B9 Socio-Economic B9.7
6.2	Social and Economic	Undertake an assessment of the impact of the dredging proposal on recreational and commercial fishing activities and the traditional owner values related to traditional fishing and hunting.	Part B9 Socio-Economic B9.7
6.3	Social and Economic	For identified social impacts, social impact mitigation strategies and measures should be presented to address the recruitment and training of the construction and operational workforces and the social and cultural implications this may have for the host community, including if any part of the workforce is sourced from outside the social and cultural area.	Part B9 Socio-Economic B9.5, B9.6, B9.7
6.3	Social and Economic	Describe any consultation about acceptance of proposed mitigation strategies, and how practical management and monitoring regimes would be implemented.	Parts A1, Project Introduction A1.11; B9 Socio-Economic Appendix B, Stakeholder and Community Engagement Report
7	Economies and management of impacts	Describe the existing economy in which the project is located and the economies materially impacted by the project. Include:	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	· a map illustrating the local and regional economies (local government areas—LGAs) that could be potentially affected by the project	Part B1 Land B1.2

7	Economies and management of impacts	· gross regional product or other appropriate measure of annual economic production	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	· demographic and employment profile of the study area as a whole and disaggregated by LGA. Include: – existing population (size, age, distribution)	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	– existing community profiles of the LGAs directly affected by the project (household type, size, average income) – existing employment statistics (part-time/full-time, by occupation)	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	– the regional economy's key industries and their contribution to regional economic income	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	· sufficient baseline economic data to underpin a comprehensive assessment of the direct, indirect, cumulative, costs and impacts of the project	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	· the key regional markets relevant to the project: – labour market	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	– education and training markets	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	– housing and land markets	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	– construction services and building inputs market	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	– regional competitive advantage and expected future growth	Parts B9 Socio-Economic B9.5; Appendix D9 Economics Analysis Feasibility Report; Appendix D6. Cairns Cruise Shipping Development – Demand Study, 2014. Summarised in A1 Project Overview A1.8
7	Economies and management of impacts	– tourism markets.	Appendix D6. Cairns Cruise Shipping Development – Demand Study, 2014. Summarised in A1 Project Overview A1.8
7	Economies and management of impacts	The potential impacts should consider local, regional, state and national perspectives as appropriate to the scale of the project.	Parts B9 Socio Economic; A1 Project Overview A1.8
7	Economies and management of impacts	The analysis should describe both the potential and direct economic impacts including estimated costs, if material, on industry and the community, assessing the following: · property values · industry output · employment · the indirect impacts likely to flow to other industries and economies from developing the project, and the implications of the project for future development · the distributional effects of the proposal including proposals to mitigate any negative impact on disadvantaged groups.	Appendix D9 Economics Analysis Feasibility Report; Part A1 Project Overview A1.8
7	Economies and management of impacts	· the assessment of economic impacts should outline strategies to encourage participation by local industry and the local workforce, including: · strategies for assessing the capacity and cost-effectiveness of sourcing goods and services from the regional and wider state economy during the pre-construction, construction, operation and rehabilitation phases of the project · strategies for ensuring local suppliers of goods and services receive full, fair and reasonable opportunity to tender for work throughout the life of the project.	Part B9 Socio-Economic B9.6; Appendix D9 Economics Analysis Feasibility Report
7	Economies and management of impacts	· Government-funded projects must prepare a Local Industry Participation Plan (LIPP) in accordance with the Queensland Local Industry Policy (Department of	Part B9 Socio-Economic B9.6
7	Economies and management of impacts	· the indirect impacts likely to flow to other industries and economies from developing the project, and the implications of the project for future development	Part B9 Socio-Economic B9.6

8.2	Hazard and risk	<ul style="list-style-type: none"> Identify and adopt, where appropriate, any changes to operating procedures that would reduce the possibility of these events occurring, or reduce the severity of the events should they occur. Present draft risk management plans for the construction and operational phases of the project. 	Part B17 Hazard and Risk B17.6
8.3.1	Hazard and risk	<ul style="list-style-type: none"> Describe the existing health and safety values of the community, workforce, suppliers and other stakeholders in terms of the environmental factors that can affect human health, public safety and quality of life, such as air pollutants, odour, lighting and amenity, dust, noise and water. 	Parts B17 Hazard and Risk B17.5; B11 Air Quality B11.4; B10 Noise and Vibration B10.4; B6 Water Resources B6.3
8.3.2	Hazard and risk	<ul style="list-style-type: none"> Define and describe the objectives and practical measures for protecting or enhancing health and safety community values. Describe how nominated quantitative standards and indicators may be achieved for social impact management, and how the achievement of the objectives will be monitored, audited and managed. 	Parts B17 Hazard and Risk ; Part D East Trinity REF D6; Part C - Management Plans
8.3.2	Hazard and risk	<ul style="list-style-type: none"> Assess the cumulative effects on public health values and occupational health and safety impacts on the community, workforce and regional health services from project operations and emissions including tourist visitors from cruise ships. Recommend any practical monitoring regimes in this section 	Part B17 Hazard and Risk B17.5
8.3.2	Hazard and risk	<ul style="list-style-type: none"> Include relevant consultation with the appropriate regional health service providers. 	Part B17 Hazard and Risk B17.6
8.4	Hazard and risk	<ul style="list-style-type: none"> The development of emergency and evacuation planning and response procedures is to be determined in consultation with state and regional emergency service providers. 	Parts B17 Hazard and Risk ; Part D East Trinity REF D6; Part C - Management Plans
8.4	Hazard and risk	<ul style="list-style-type: none"> Provide an outline of the proposed integrated emergency management planning procedures (including evacuation plans) for the range of situations identified in the risk assessment developed in this section. The plans are to provide for fire fighting infrastructure for the life of the project and take into account refuelling infrastructure. 	Part B17 Hazard and Risk B17.6
8.4	Hazard and risk	<ul style="list-style-type: none"> This includes strategies to deal with natural disasters during operation and construction including identification of key stakeholders. 	Part B17 Hazard and Risk B17.6
8.4	Hazard and risk	<ul style="list-style-type: none"> Present preliminary information on the design and operation of proposed safety/contingency systems to address significant emergency issues delineated in the 	Part B17 Hazard and Risk B17.5

8.4	Hazard and risk	risk assessment, together with at least the following areas of emergency:	Part B17 Hazard and Risk B17.5
8.4	Hazard and risk	· marine collision minimisation	C4 Maritime Operations Management Plan & C2. Dredge Management Plan C2.9
8.4	Hazard and risk	· fire prevention/protection	Part B17 Hazard and Risk
8.4	Hazard and risk	· leak detection/minimisation	Part B17 Hazard and Risk B17.6
8.4	Hazard and risk	· release of contaminants	Part B17 Hazard and Risk
8.4	Hazard and risk	· emergency shutdown systems and procedures	Part B17 Hazard and Risk B17.6
8.4	Hazard and risk	· natural disasters	Part B17 Hazard and Risk
8.4	Hazard and risk	If the proposed design and operation systems required are outside the scope of relevant standards or codes, a fire study is to be undertaken to ensure adequate levels of protection are in place.	Part B17 Hazard and Risk B17.6 outlines management strategies. Given the nature of the works however, a fire study is not considered necessary.
8.4	Hazard and risk	In addition, undertake an assessment of businesses that may be affected in the event of an emergency, including strategies to mitigate the impact on these businesses.	Part B17 Hazard and Risk B17.6
8.4	Hazard and risk	In regard to fires, outline strategies to manage the provision of:	Part B17 Hazard and Risk B17.5
8.4	Hazard and risk	· fire management systems to ensure the retention on site of fire water or other fire suppressants used to combat emergency incidents	Part B17 Hazard and Risk; Part C - Management Plans
8.4	Hazard and risk	· building fire safety measures for any construction or permanent accommodation	Not relevant, as no buildings proposed.
8.4	Hazard and risk	· details of any emergency response plans and bushfire mitigation plans under the State Planning Policy 1/03: Mitigating the Adverse Impacts of Flood, Bushfire and	Part B18 Cumulative Impacts Assessment B18.6
8.4	Hazard and risk	· Landslide (Department of Local Government and Planning & Department of Emergency Services 2003)	Not Relevant.
8.4	Hazard and risk	· on-site fire fighting equipment provided and the level of training of staff who will be tasked with emergency management activities	Parts B17 Hazard and Risk B17.5, 17.6
8.4	Hazard and risk	· detailed maps showing the plant outline, potential hazardous material stores, incident control points, fire fighting equipment and the like.	Part B17 Hazard and Risk B17.5
8.4	Hazard and risk	· an outline of any dangerous goods stores associated with the plant operations, including fuel storage and emergency response plans.	Part B17 Hazard and Risk B17.5
8.4	Hazard and risk	Present outlines of emergency planning and response strategies to deal with relevant incidents above, which have been determined in consultation with state and regional emergency service providers, and which show integration of emergency services into the plans.	Part B17 Hazard and Risk B17.6
8.4	Hazard and risk	Present plans for emergency medical response and transport and first aid matters with involvement of the relevant state agencies (such as the Queensland Ambulance Service, Queensland Fire and Rescue Service and Emergency Management Queensland).	Part B17 Hazard and Risk B17.6
9	Cumulative impacts	Summarise the project's cumulative impacts and describe these impacts in combination with those of existing or proposed project(s) publicly known or advised by the office of the Coordinator-General to be in the region, to the greatest extent practicable. Assess cumulative impacts with respect to both geographic location and environmental values. In particular, address cumulative impacts in sensitive environmental areas identified in Section 5.4.1 of this TOR (refer to page 26).	Part B18 Cumulative Impacts Assessment B18.2. Chapters B2, B5 and B8 outline potential impacts on sensitive environmental areas.
9	Cumulative impacts	Explain the methodology used to determine the cumulative impacts of the project, detailing the range of variables considered (including relevant baseline or other criteria upon which the cumulative aspects of the project have been assessed, where applicable).	Part B18 Cumulative Impacts Assessment B18.2
10	Sustainable development	Provide a comparative analysis of how the project conforms to the objectives for 'sustainable development' — see the <i>National Strategy for Ecologically Sustainable Development (Commonwealth of Australia 1992)</i> .	Part A1 Project Overview A1.15, B18, Cumulative Impacts Assessment
10	Sustainable development	Consider the cumulative impacts (both beneficial and adverse) of the project from a life-of-project perspective, taking into consideration the scale, intensity, duration and frequency of the impacts to demonstrate a balance between environmental integrity, social development and economic development.	Executive Summary, Part A1 Project Overview A1.15, B18, Cumulative Impacts Assessment

10	Sustainable development	This information is required to demonstrate that sustainable development aspects have been considered and incorporated during the scoping and planning of the project.	Part A1 Project Overview A1.15 ,B18, Cumulative Impacts Assessment
11	Environmental management plan	Detail the EMPs for the construction and operational phases of the project. The EMP should be developed from, and be consistent with, the information in the EIS. The EMP must meet the requirements of section 203 of the EP Act, address discrete project elements and provide life-of-proposal control strategies. It must be capable of being read as a stand-alone document without reference to parts of the EIS.	C1, Construction & Operational Environmental Management Plan; C2, Dredge Management Plan; C3 Vessel Transport Management Plan; C4 Maritime Operations Management Plan
11	Environmental management plan	The EMP must comprise the following components for performance criteria and implementation strategies:	
11	Environmental management plan	<ul style="list-style-type: none"> the proponent's commitments to acceptable levels of environmental performance, including environmental objectives, performance standards and associated measurable indicators, performance monitoring and reporting 	C1 Construction & Operational Environmental Management Plan C1.7; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> impact prevention or mitigation actions to implement the commitments 	C1 Construction & Operational Environmental Management Plan C1.7; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> corrective actions to rectify any deviation from performance standards 	C1 Construction & Operational Environmental Management Plan C1.7; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> an action program to ensure the environmental protection commitments are achieved and implemented. This will include strategies in relation to: <ul style="list-style-type: none"> continuous improvement 	C1 Construction & Operational Environmental Management Plan C1.5; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> environmental auditing 	C1 Construction & Operational Environmental Management Plan C1.7; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> monitoring 	C1 Construction & Operational Environmental Management Plan C1.7; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> reporting 	C1 Construction & Operational Environmental Management Plan C1.7; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> staff training 	C1 Construction & Operational Environmental Management Plan C1.5; C2 Dredge Management Plan C2.9 ; C3 Maritime Operations Management Plan C3.4
11	Environmental management plan	<ul style="list-style-type: none"> where relevant, a rehabilitation program for land proposed to be disturbed under each relevant aspect of the proposal. 	C1 Construction & Operational Environmental Management Plan C1.7;
